

The system navigation screen icons are described as follows:

Back: Returns to the previous screen. Tap and hold to return to the Home screen.

Move to next vertical screen (up/down).

Select an item. Add an item. Cancel/Close a screen.

Delete an item.

Select and save an item.

Home screen is Locked (passcode protected). Requires password to access the Home screen.

Edit an item.

EDIT

Help information. Tap the Help icon to display the contextual on-screen help information.

Green: System status is good (OK)

Blue: System Status Information.

Orange: Warning status condition.

Red: Alert status condition. Note: Badges are displayed on the Home screen Status icon.

Features and Light Green Number Badge: Indicates the number of Features or lights currently activated.

NAVIGATION

1

Status Icon Number Badge: Indicates the number of Alerts and Warnings present in the Status Screen. Items shown in the Status can be selected from the Alerts & Notifications Screen. Note: To select or hide Status Badge icons, see Settings > Alerts and Notifications, on page 91.

Home Screen Pool and Spa Status Badges: Note: Shared equipment one badge for each body.

Green Badge: A Green (Schedule) badge displayed on the on the Home screen Pool/Spa icon indicates that a programmed schedule is active.

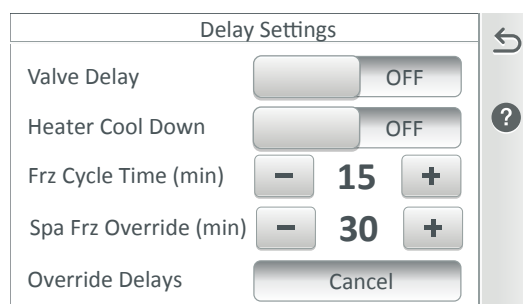

Yellow Badge (Pool/Spa filter pump turned on): A Yellow Badge indicates a delay is in progress. Delays: (Heat Cool-Down (pump), Valve Rotation Delay, Pump Priming). Note: For Pool and Spa (shared equipment systems), when the pool or spa pump is turned on, the Yellow badge displays on the pool or spa icon; not on both at the same time. See page 90 to hide/show Yellow and Blue Badges.

Blue Badge (Pool/Spa pump turned on): A Blue Badge indicates that the Pool/Spa pump has been turned on.

Using Override Delays (see page 130):

- Go to Delays and tap Override Delays.
- Override Delays will cancel all active delays. If a Schedule is running, a Green Badge will display. If the pool/spa pump is manually enabled (ON/OFF), a Blue badge will display.

Badge Colour Changing Sequence: The colour badges shown on left indicate No heater (Off) installed.

Yellow changes to Green: A schedule has started running.

Yellow changes to Blue: Pool/Spa pump has been manually turned ON. Blue will stay on until pool/spa pump is manually turned off. Note: Blue Badge will stay on for the Egg Timer duration (12 hrs. default). If the Egg Timer is set to Don't Stop to circuit will run continuously until manually is switched off.

HOME SCREEN CONNECTION INDICATORS

The system navigation screen icons are described as follows:

Connection indicators for IntelliCenter™ Outdoor and Indoor Control Panel and Wireless Remote are displayed on the top right side of the Home screen.

Padlock: Indicates the Home screen is passcode protected. Requires password to access the Home screen.

Pentair logo: Indicates connection to intellicenter.com server, see page 127.

Battery Icon: Wireless Remote battery indicator.

Green/Amber/Red Dot: These connection icons display on the Expansion Panel (s). Green indicates connection to the Expansion Panel indicates synchronizing with the main Outdoor Control Panel. Red indicates no connection with the Outdoor Control Panel.

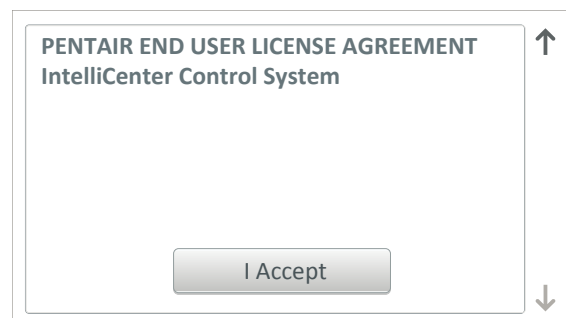

Ethernet Icon: Ethernet icon indicates an Ethernet connection to the Outdoor Control Panel.

Initial System Power Up

After all required pool/spa equipment has been connected to the IntelliCenter™ Control System, apply power to the system at the main panel circuit breaker. Upon the initial system power up, the Outdoor LCD Control Panel will display the PENTAIR END USER LICENSE AGREEMENT.

Please read this agreement. To continue, tap the

Down arrow on the right side of the screen to scroll down to the end of the agreement and tap I Accept to accept the agreement. The Home screen is then displayed. See page 137 for Setup Wizard.

Setup Wizard and Wireless Remote: Before running the Setup Wizard on the Wireless Remote, the Wireless Transceiver antenna must be connected to the IntelliCenter Control System Power Centre. For more information, see the IntelliCenter Installation Guide. For Wireless Remote settings, see page 142.

Setup Wizard and Wireless Network Bridge (www.intellicenter.com): In order to connect the IntelliCenter Control System to your home network, the Wireless Network Bridge Antenna must be connected to the IntelliCenter Power Centre and your home network. For more information, see the IntelliCenter Installation Guide. For Wireless Network Settings, see page 127.

HOME SCREEN DISPLAY ICONS & DAY / NIGHT THEME

For optimal screen viewing, the colour touch screen contrast can be set for daylight, or night time viewing.

To change the Day/Night Theme: From the Home screen, tap Settings > General > Day/Night Themes. Select Day Theme, Night Theme or Transition Type (Manual or Auto). See page 90.

Change the screen time out delay: If you require the screen to stay on longer and not turn off while setting up system configurations; from the Home screen, tap Settings > General > Backlight, and change the Dim Display and Turn Off Display settings to the desired time in minutes.

Manual Control of Equipment and Functions

The Home screen displays the current pool and spa operating status. The example below shows IntelliCenter™ Control System model i5PS (pool/spa shared equipment with heater). Tap an icon to access its control screen to manually control pool and spa equipment. The Home screen displays the installed equipment as configured from the Settings screen, see page 81.

POOL / SPA SYSTEM CONFIGURATIONS

Systems with multiple pools and/or spas (up to two bodies of water total).

Depending on the Personality Card installed in the IntelliCenter™ Control System power centre (see page 138 a system can be configured as follows):

Single Body (model i5, i8, i10): One set of equipment for a single body of water (pool or spa).

Shared Equipment (i5PS, i8PS, i10PS): One body of water with shared equipment (same pump, heater and filter).

Dual Equipment (i10D): Two separate equipment sets for two separate bodies of water (pool/pool and spa/spa (only one pool or spa icon with draw)).

The Home screen displays each additional body of water under the main Pool and Spa icon. Up to two bodies maximum of water can be displayed.

Lower Drawers: An i10D model system can be configured as Pool, Pool or Spa, Spa. Using the lower draws on/off button, each body of water can be turned on or off. Note: The Home screen shown on the left are passcode protected, see Passcode Protect below for more information.

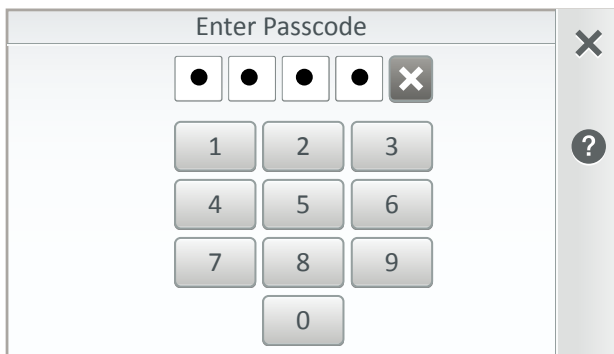

Tap the On/Off slide button icon to manually control the pool or spa filter pump and heater for the selected body of water. Tap the Up/Down arrow to display more pools and/or spas. The current settings are displayed above the pool and spa the icon.

Note: To configure the pool and spa systems, see Settings > Advanced System Configuration > Installation Setup > Body Configuration, see page 99.

INTELLICENTER™ CONTROL SYSTEM MENU

Passcode Protect

Passcode Protect: When a screen or individual screen item is Passcode protected a lock icon is displayed. To access the passcode protected screen or item, tap on the screen icon to display the Passcode four digit screen. Enter the four digit Passcode. After passcode is entered, the screen can be accessed.

Tap number key pad to enter the four digit Passcode to access the Passcode protected screen. Note: To setup Passcodes, see Settings > Security on page 91.

- **Restore Factory Defaults:** Restore system to factory configuration.
- **Setup Wizard:** Step-by-step system configuration.

HOME SCREEN

The IntelliCenter™ Control System Outdoor Control Panel Home screen displays the current ambient air temperature, and the current system time. Green badges displayed above the Pool and Spa icons show the current water temperature and heater set point temperature. Green badges displayed above the Features and Lights icon show the number of active features and lights that have been manually switched on. The Pentair logo (IntelliCenter.com connection), Ethernet connection and the optional Wireless Remote signal and battery strength may also be displayed. The Home screen example below shows an i5PS IntelliCenter Control System (shared equipment pool and spa with heater). The Home screen is displayed when power is applied to the IntelliCenter Control Panel Power centre.

Schedule: Setup your daily pool/spa operations. "Vacation" is displayed when the system is in Vacation mode.

Usage: Historical usage data: Keep track of pool/spa equipment usage data.

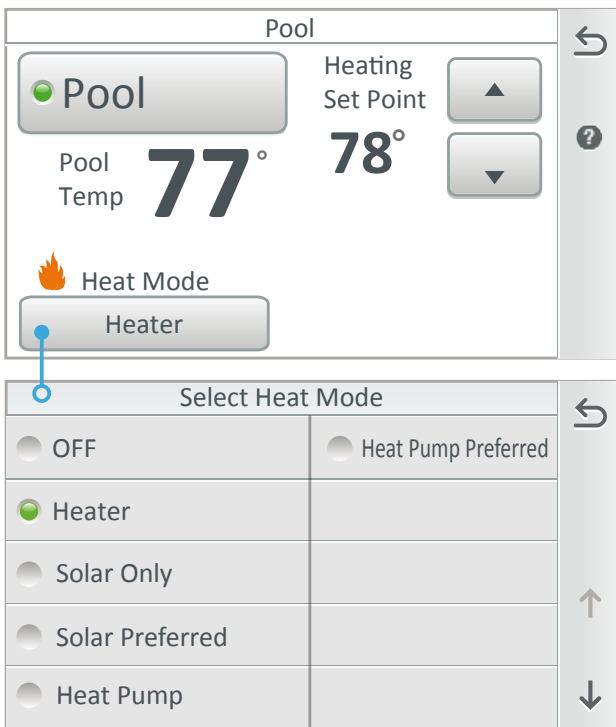

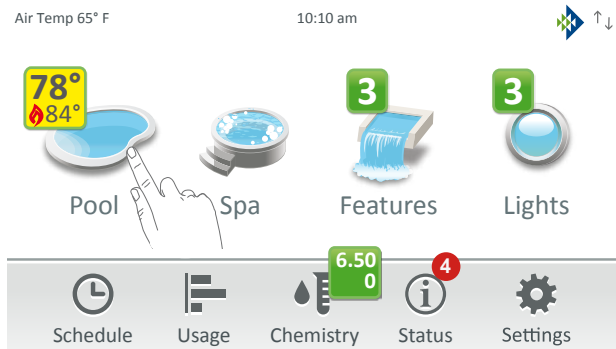

Chemistry: Sanitizers: IntelliChem® Controller, IntelliChlor® and iChlor™ Salt Chlorine Generator. To display pH and ORP readings on Home screen Chemistry Icon, see Settings > General > Chemistry Readings Badge (Set to ON). See page 91. The IntelliChem Controller can be configured to be stand-alone or to control an IntelliChlor/iChlor SCG.

Status: View the current pool/spa status/alerts.

Settings: Setup and configure equipment.

Tap the Home screen Pool icon to display the Pool Pump control settings screen. From this screen tap the Pool Pump button to activate the pool pump. A Blue badge displayed on the Pool icon indicates the Pool/Spa pump button has been manual turned on. The Blue badge displays until the pump button is turned off. The badge displays the current pool water temperature. If there is a heat source active, a flame icon is displayed with the pool water set point temperature. Note: For more information about screen badges, see page 3.

Note: The displayed heat sources are configured from Settings > Advanced System Configuration > Installation Setup > Circuits, see page 96.

Heat Mode Button: Tap the Heat Mode button to select the available heat source type: Off (no heat source), Heater, Solar Only, Solar Preferred, Heat Pump, UltraTemp or Hybrid. Note: To add a heater, see page 112.

Pool Badge Icons: A Flame icon (heat source active) is displayed with the current heat set point temperature. A Snow Flake icon indicates the UltraTemp Heat Pump or Solar Heat (if enabled) is in cooling mode. A Sun icon indicates solar heat is active. Select the heat source from the Select Heat Source screen.

Heat Mode indicators:

Flame:
Heat Source
Active

Snow Flake:
Nocturnal
Cool Down

Sun:
Solar
Heat Source

Pool Pump On/Off Button: Tap this button to turn the Pool Pump on to activate the heater. Tap the Heat Mode button to select a heat source. Note: When the heater is turned it will activate the pool/spa pump when the Heating Set Point is above or at the current water temperature reading.

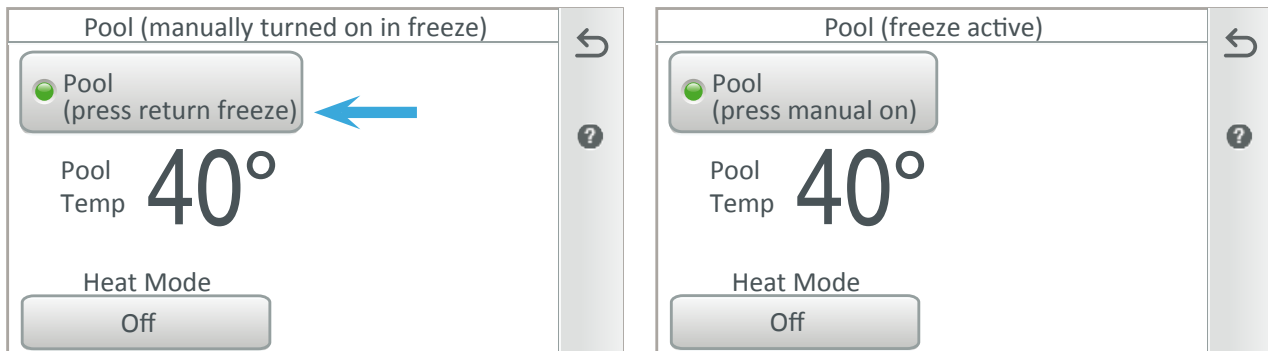

Note: The Pool button name can be changed (up to nine characters), go to Settings > Advanced System Configuration > Installation Setup > Body Configuration, see page 95.

Heating Set Point: Use the Up/Down button to increase or decrease the heat set point temperature.

Pool Temperature: Displays the current pool water temperature in Fahrenheit or Celsius, see page 81.

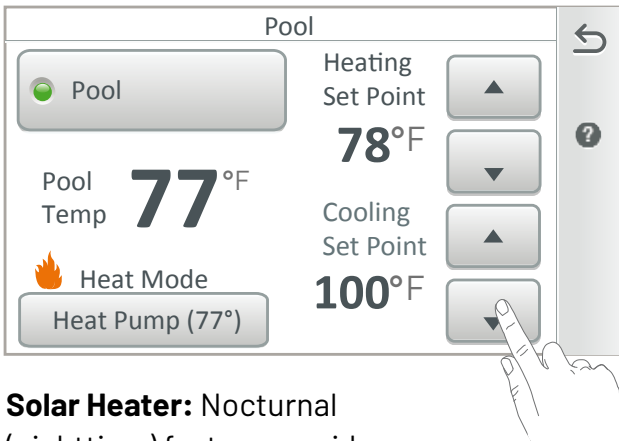

Pool Pump Button (Override Freeze Protect)

Freeze Protection Override: The pool pump can be manually turned on to override the Freeze protection. This also applies if a schedule is running. To assign freeze protection to a circuit. See page 117 for more information.

Schedules (Heat Source and Set Temperature) See page 60: See Schedules to schedule the pool/spa pump to turn on at a specific time to pre-heat the pool or spa water. From the Schedules Weekly or One Time Only option, select Heat Source and select a heat source, then set the Set Temperature settings.

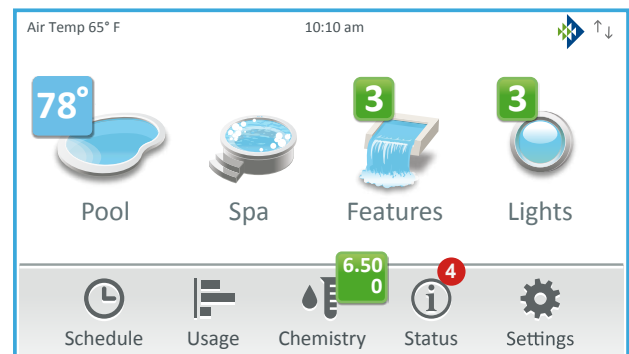

Nocturnal Cooling Set Point Temperature control for Heat Pump or Solar: If using a heat pump, use the Cooling Set Point temperature or solar heat control buttons displayed on the Pool and/or Spa screen to adjust the nighttime temperature of the pool/spa water. See page 132.

Solar Heater: Nocturnal (nighttime) feature provides automatic cooling during night time hours for pools that overheat in hot climates to circulate the warmer pool water to the collector panels when the collector temperature and the pool temperature is hotter than the high limit setting. This process cools the pool water over time. Note: This feature is also used for the UltraTemp heat pump, Hybrid Heater and a Heat Pump. See page 132. Note: If the Heat Mode is set to Off, the Heating Set Point setting on the Pool screen is not displayed. Tap the Heat Mode button to display the Select Heat Source screen. Note: The Home screen displays a Blue badge over the Pool icon with the current pool water temperature.

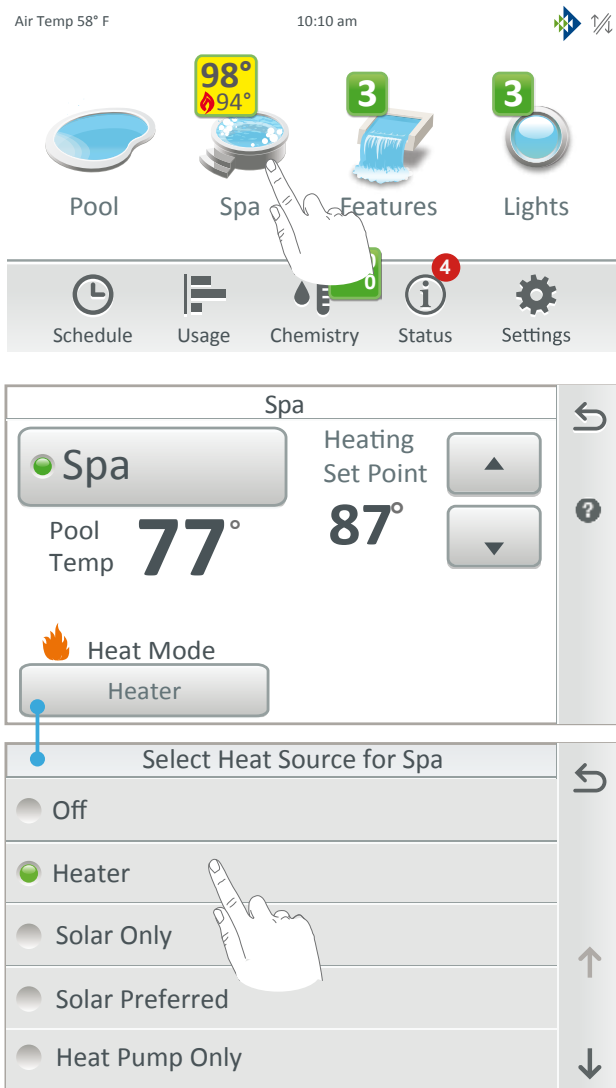

Don't Change Feature (Schedules Heat Source). See page 72.

Tap the Home screen Spa icon to display the Spa Pump control settings screen. From this screen tap the Spa Pump button to activate the Spa heat source. A Blue badge displayed on the Spa icon indicates the Pool/Spa pump button has been manually turned on. The Blue badge displays until the pump button is turned off. The badge displays the current pool water temperature. If there is a heat source active, a flame icon is displayed with the pool water set point temperature source. Note: For more information about screen badges, see page 3.

Spa Badge Icons: A Flame icon indicates that the heat source has been called for. A Snow Flake icon indicates the UltraTemp (Hybrid) Heat Pump or Solar Heat (if enabled) is in cooling mode. A Sun icon indicates solar heat is active. Select the heat source from the Select Heat Source screen.

Heat Mode indicators:

Flame:
Heat Source
Active

Snow Flake:
Nocturnal
Cool Down

Sun:
Solar
Heat Source

Spa Pump On/Off Button: Tap this button to turn the Spa Pump on to activate the heater. Tap the Heat Mode button to select a heat source.

Heating Set Point: Use the Up/Down button to increase or decrease the heat set point temperature.

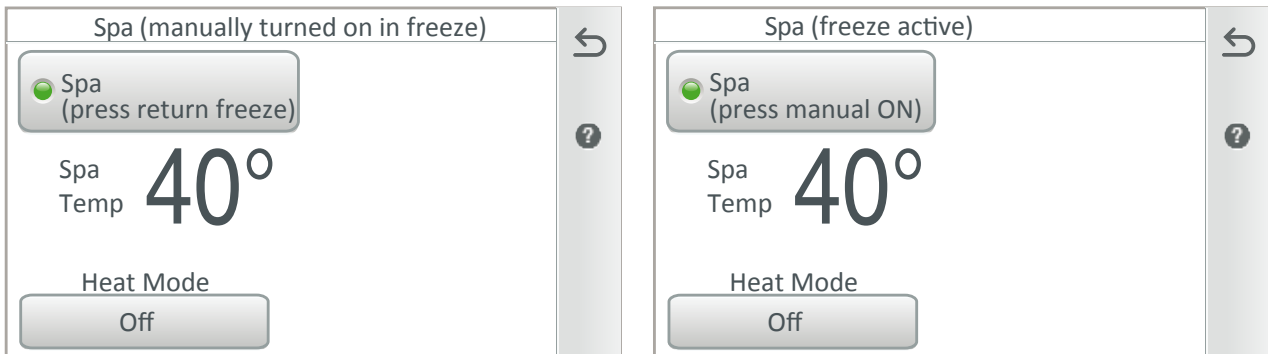

Select the heat mode from the Select Heat Mode screen. Note: The Spa button name can be changed (up to nine characters), go to Settings > Advanced System Configuration > Installation Setup > Body Configuration, see page 95.

Spa Manual Heat ON/OFF: When set to ON, overrides current heater settings and schedules to allow manual control of the spa heater settings (on/off and temperature settings), see page 52.

Heat Mode Button: Tap the Heat Mode button to select the spa heat source type: Off (no heat source), Heater, Solar Only, Solar Preferred, Heat Pump (Heat Pump Preferred) or UltraTemp® (UltraTemp Preferred). Note: To add a heater, see page 112. To add a circuit go to Settings > Advanced System Configuration > Installation Setup > Circuits, see page 96.

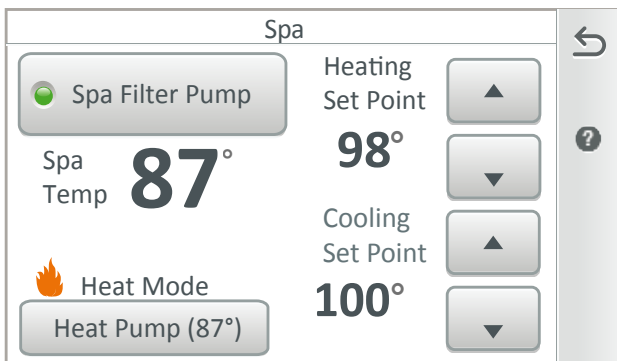

Spa Pump Button (Override Freeze Protect -See Delay Settings, page 143.)

Spa Freeze Override Time (0-240 min (4 hrs)): Override the spa pump circuit that has freeze protection active to run the pump and heat the spa during freezing temperatures. This also applies if a schedule is running.

Freeze Cycle Time (min): Set the freeze protection time from 5 to 60 minutes to run the pump during freezing temperatures. Default time is 5 minutes. **See page 143 and 117.**

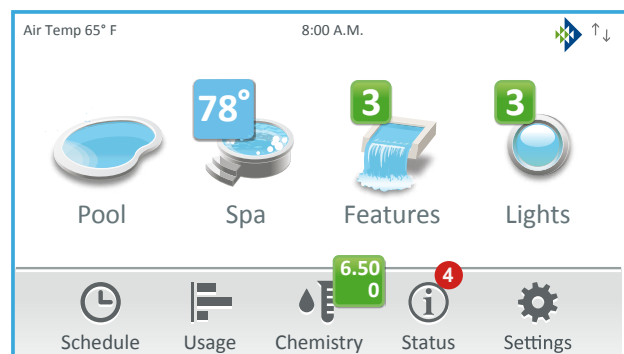

Spa Heater Button: Tap to access the Select Heat Mode screen. Tap the desired heat source (solar or conventional heaters). Note: Heat sources are configured from Settings > Advanced System Configuration > Installation Setup > Circuits, see page 96. Also see: Manual OP Priority: Manual ON/OFF circuit during a schedule. See page 98.

Spa Manual Heat ON/OFF: See page 117: If the Heat Enabled (Default ON), feature is selected and the Spa pump button (or from the Spa-Side remote, or Wireless Controller) is turned on, the pump will turn on and the heater will begin to heat the spa (even if the heater is set to OFF). This feature allows you to program the pool pump to filter daily with the heater set to off, and then be ready to heat whenever the Spa button is pressed. See Settings > Advanced System Configuration > Installation Setup > Spa Body Configuration > Spa Settings on page 110.

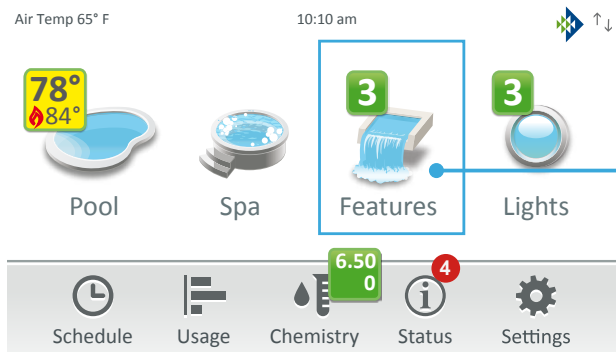

Schedules (Heat Source and Set Temperature) See page 60: See Schedules to schedule the pool/spa pump to turn on at a specific time to pre-heat the pool or spa water. From the Schedules Weekly or One Time Only option, select "Heat Source" and select a heat source, then set the Set Temperature settings. Note: The Heating Set Point setting on the Spa screen is not displayed if Off is selected on the Select Heat Source screen. Tap the Heat Mode button to display the Select Heat Source screen.

FEATURES

Up to 32 individual or Groups of Feature Circuits can be assigned as a Generic circuit or a Spillway circuit. Tap Features on the Home screen to display the Feature circuits screen. From the Features screen you can manually turn on or off an individual Feature circuit or a group of Features circuits. To assign Feature Circuits, see Settings > Advanced System Configuration > Installation Setup > Circuits > Feature Circuits on page 115.

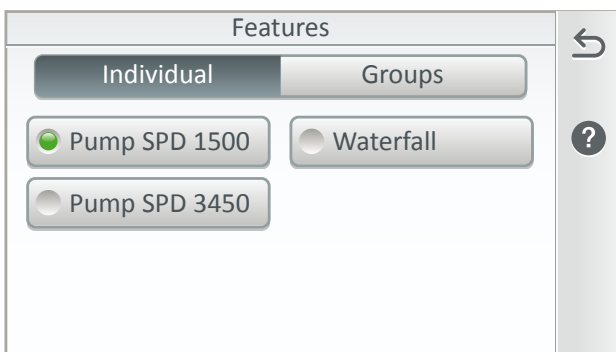

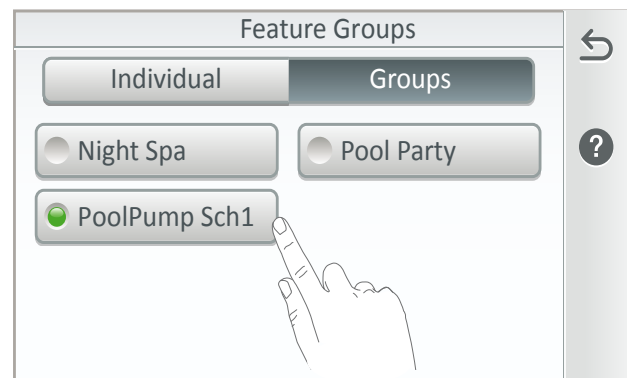

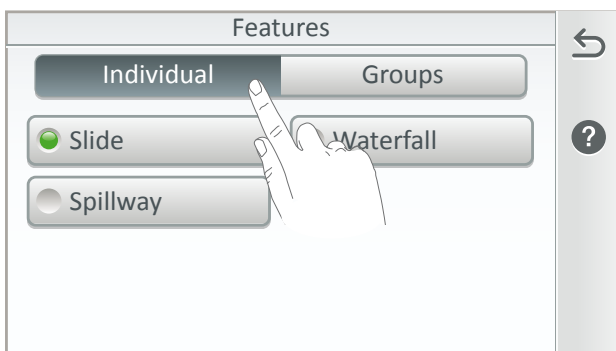

Green Number Badge: Displays the number of active feature circuits. Tap the Features icon on the Home screen to display the Feature circuits. To hide the Features number badge. **See page 115, Settings > Advanced System Configuration > Installation Setup > Circuits > Feature Circuits > Feature Circuit Settings (Visible in Features (Y/N) option).**

Features: Individual / Groups

Tap Individual or Groups to display the assigned Feature circuits buttons. Tap the circuit button to switch the individual circuit or a group of circuits on or off.

Feature Groups can include multiple circuits for multiple schedules. You can also set different pump speed using IntelliFlo® Pump. Assign each feature circuit a different pump speed to manually control or schedule different pump speeds.

See Installation Setup on page 110. For more about Light Groups see page 89, 113. For Feature Groups see page 116.

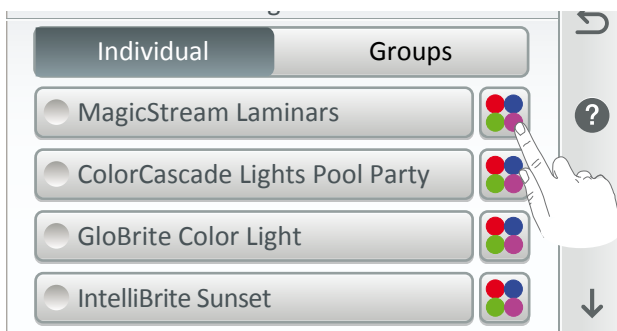

To access the Lights screen, tap the Lights icon on the Home screen. From the Lights screen you can manually turn on or off individual lights, groups of lights or all lights. Lights displayed in the Lights screen are configured from the Circuits screen, see Settings > Advanced System Configuration > Installation Setup > Circuits, page 96. Light circuits settings include Schedule Egg Timer and Freeze Protect options. Note: A Green number badge displayed on the Home screen Lights and Features icon, indicates the number of individual and/or groups of lights currently turned on. To hide the number badge on the Features icon, turn Visible in Features OFF. See page 113.

All On/All Off Button (IntelliBrite®, ColorCascade®, GloBrite® Light (Colour and White), and MagicStream® lights): Tap the All On or All Off button to turn all light circuits On or Off. Note: Up to 12 light circuits can be configured.

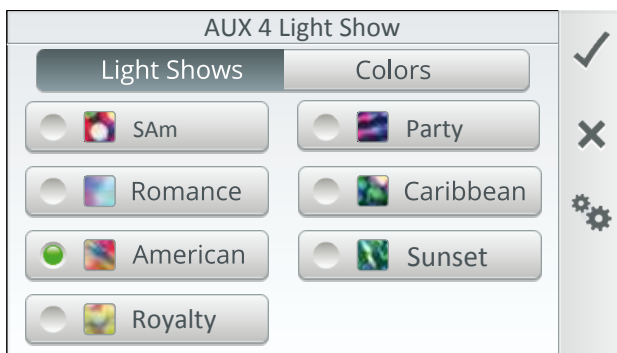

Lights (Individual/Groups Button): Tap either of these buttons to toggle between the Individual and Groups screens.

Individual: Displays the assigned individual AUX Light circuits. Tap the light name button to turn the light ON or OFF.

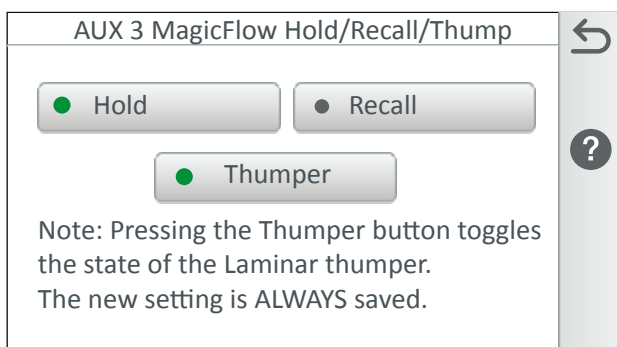

Four Colour Dots Edit Button (IntelliBrite): Tap edit button to display the Colours or Light Shows screen.

Light Shows: Includes IntelliBrite, ColorCascade, GloBrite Colour Light, and MagicStream. Tap one of the displayed Light Shows to switch the light show on or off. The options are: SAm, Romance, American, Royalty, Party, Caribbean, and Sunset.

✓ Check: Tap Check to save changes and return to the Lights screen.

X button: Tap to exit and return to the previous screen without saving changes.

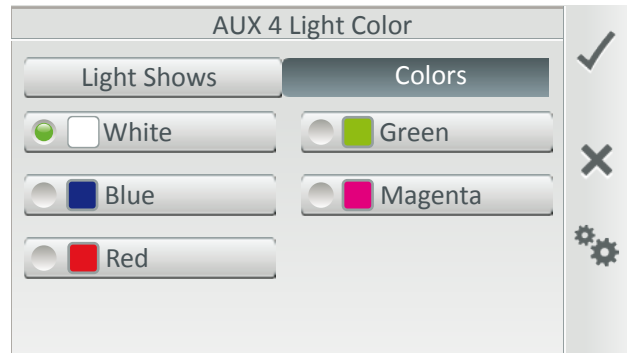

⚙️ MagicStream Laminar only (Light Shows and Colours): Tap the Gears icon to access the Thumper Toggle screen. Tap the Thumper button to activate the built-in solenoid Thumper to create a random wrinkle in the laminar's water stream and display a brilliant spot of light that moves along the stream's arc.

Fixed Colours: For IntelliBrite®, ColorCascade®, GloBrite® Color Light and MagicStream® lights:

Change a Fixed Colour: From the Lights screen, tap the Four Colour Dots Edit Button to display the Colours (or Light Shows) screen. From the Colours screen, select one of the displayed colour buttons (White, Blue, Red, Green and Magenta). Tap the Check button to return to the Lights screen. Tap the light name button to turn the colour light on or off. Tap the Return arrow to return to the Home screen. Note: GloBrite White light and Dimmer circuits only display white light.

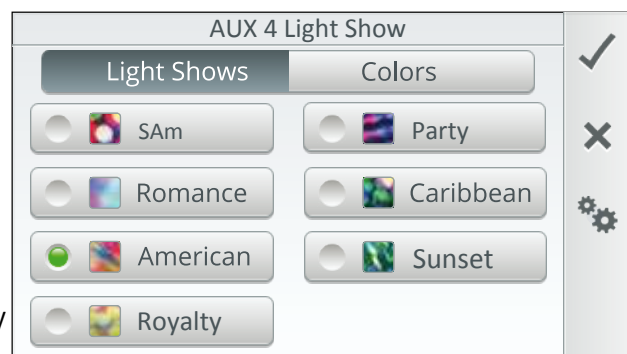

Individual Lights - Switch between fixed colours and light shows:

Four Colour Dots Edit Button

(IntelliBrite): Tap this button to display the Colours and Light Shows screen.

To display a Light Show, tap one of the Light Show buttons. The options are: SAm, Romance, American, Royalty, Party, Caribbean, and Sunset). Tap Check to return to the Lights screen.

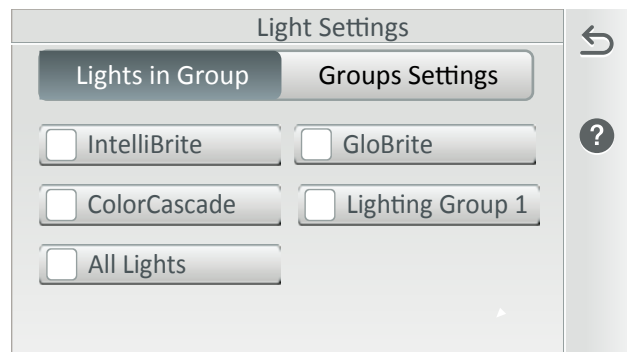

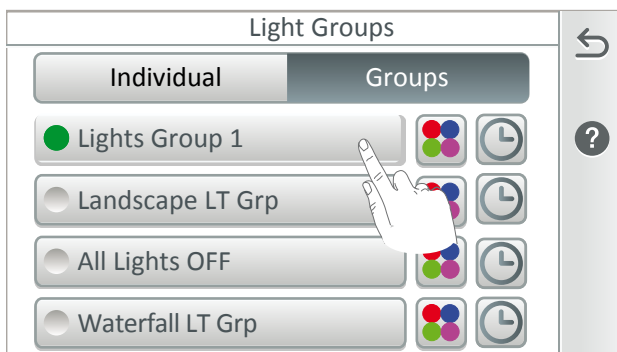

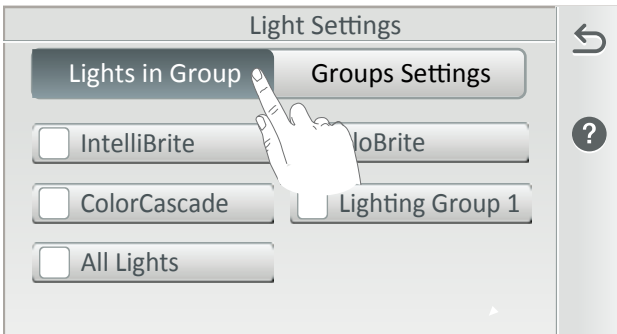

Light Groups

From the Lights screen, tap the Groups button. To turn on or off a selected group of lights, tap the group of light name button. Light Groups displayed in the Lights screen are configured from the Settings > Advanced System Configuration > Installation Setup > Circuits > AUX Circuits screen. To add a group of lights, tap the Four Dots icon to display the Groups screen. Note: Light Groups can be created from the Lights screen (see page 54), Installation Setup (see page 110), Groups (see page 88), and displayed in the Features screen (see page 116).

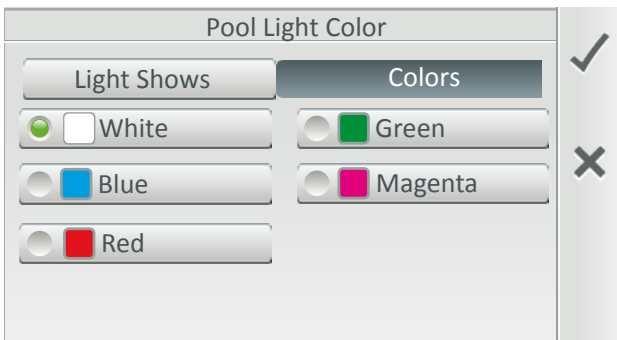

Tap the Edit Pencil icon to display the Light Settings screen. Tap **Light in Group or Group Settings** to change the light Fixed Colour and Light Shows in a selected group of lights.

Lights (Groups - Change a Light Colour or Light Show)

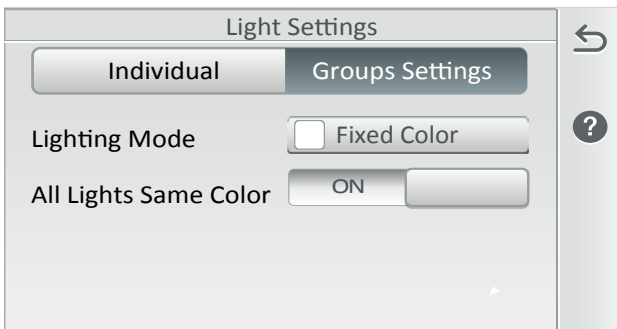

Change a Light Colour: The Lights in the Group screen display the lights in the selected group (Fixed Colour). To change the colour of the selected light in the group, tap the light button and choose a different colour for the light (White, Blue, Red, Green or Magenta). Tap check to return to the previous screen.

All Lights Same Colour (ON/OFF): From the Lights Settings screen, tap the All Lights Same Colour ON/OFF button.

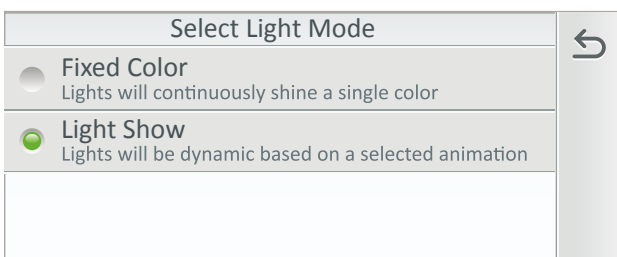

ON: All lights in the group are set to the same colour.

OFF: Each individual fixed colour light can display a different colour.

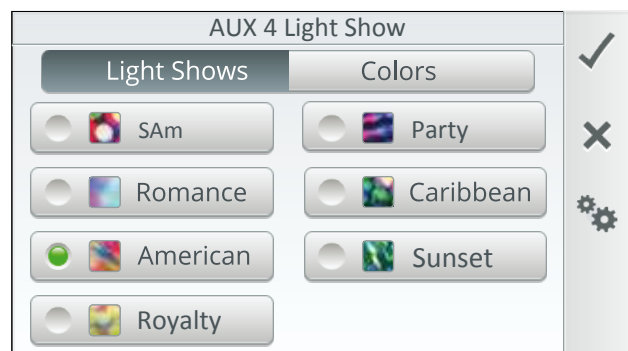

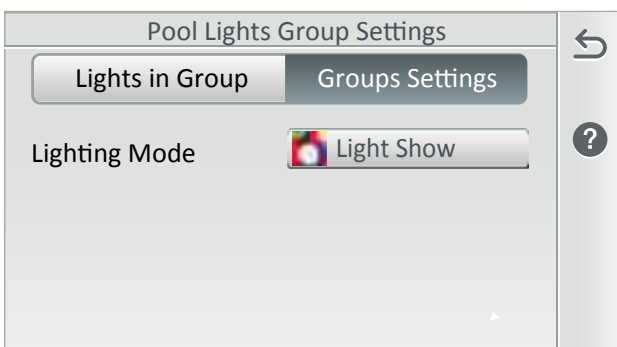

Tap Light in Group to view the selected Lighting Mode.

Change a Light Mode from Fixed Colour to Light Show: From the Light Settings screen, Tap the Groups Settings button, tap the Lighting Mode button (Fixed Colour) and select Light Show. Select one of the Light Shows. Tap the Check to return to the Light Settings screen.

Select a Different Light Show: Tap the Lighting Mode button and select one of the Light Shows. Tap Check to return to the previous screen.

The Light Groups Sync, Swim and Set SAM feature are configured from Settings > Groups. The SAM feature supports IntelliBrite®, ColorCascade®, GloBrite® Light (Colour and White), and MagicStream® lights. For more information about creating light groups, see page 89. From the Groups screen, light groups can be added, and each light colour and delay (0 to 60 seconds) from the Groups screen. Select the group of lights to change. Tap Colour Settings. Set the delays between the lights from 0 to 60 sec.

Light Group Settings

Group Name: All Yard Lights

Included Lights: 3

Egg Timer: 0hr. 0min.

Color Settings

Select Circuit to Edit

Beach Light	Delay 0s White
Back Yard Light	Delay 15s Light Green
Pool Light	Delay 25s Green
Pool Light 2	Delay 35s Cyan
Spa Light	Delay 55s Blue

Light Groups

Individual | **Groups**

- Lights Group 1
- Landscape LT Grp
- All Lights OFF
- Waterfall LT Grp

- Edit (Pencil):** Display the Light Settings screen.
- Lights in Groups:** Displays the light circuit name and colour. Note: All light will display the same colour if All Light Same Colour is enabled (ON) from the Group Settings screen. To display different fixed colours for each light, select All Light Same Colour (OFF).

- Sync (SAM Colour Swim effect):** Tap this momentary button to synchronize (Green light on) all IntelliBrite lights in the group. The Light in the group will go to the beginning of the SAM rotation. After 21 seconds the lights will start rotating each time the button is tapped. Note: Also this feature also works for individual legacy SAM lights).
- Colour Set:** Tap this momentary button to activate (Green light on) to set the default colour for each light then stop the light on one of the selected eight (8) colours.
- Swim (SAM Colour Swim effect):** Tap this momentary button to activate (Green light on) an effect of moving colours across the pool. From the Swim Settings Delays screen set a delay between the lights so that the first light syncs and starts rotating, then the second light starts rotating after that, and the third light rotates after that with a delay between the lights.

To change the light colour or the light delay (from 0 to 60): Tap **Settings > Groups**. Select the group of lights to change. Tap Colour Settings. Set the delays between the lights from 0 to 60 sec.

GloBrite® White and Dimmer Light

From the Lights screen you can manually turn on or off individual or Groups of GloBrite or Dimmer lights. Lights displayed in the Lights screen are configured from the Circuits screen. To access the Lights screen, tap the Lights icon on the Home screen. Tap the light name to manually switch the light circuit on or off (Green light indicates the light is on).

Note: A Green number badge displayed on the Home screen Lights and Features icon, indicates the number of individual and/or groups of lights currently turned on. To hide the number badge on the Features icon, turn Visible in Features OFF. See page 113.

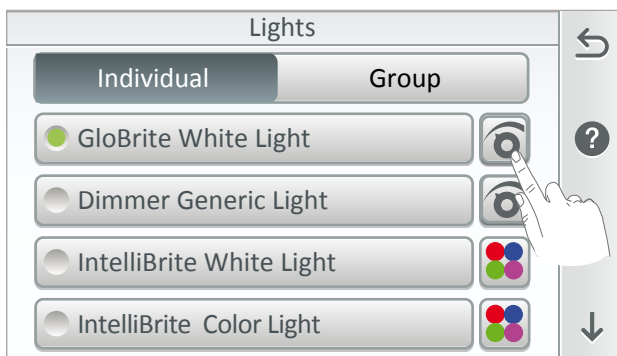

Configure a GloBrite White Light and Dimmer Light: Go to Settings > Advanced System Configuration > Installation Setup > Circuits, page 96 and 100. Select AUX Circuits, select the light AUX circuit, tap Circuit Function and select GloBrite White or Dimmer.

Dimming Lights (50%, 75%, 100%)

Lights that have dimming functionality can be dimmed from the Lights screen. Only incandescent tungsten filament lights may be dimmed. IntelliBrite, Fiber-optic, or Halogen lights cannot be dimmed. The feature circuit must be assigned a **Dimmer** circuit function.

Note: Feature Circuits can turn on light dimming circuits, but lights cannot be dimmed using this feature. The dimming level must be changed for each light dimming circuit.

GloBrite White & Dimmer ON/OFF Button: On the Lights screen, tap the **Individual button** to display the assigned light circuits. Tap the GloBrite White light or the Dimmer Generic Light button to switch the light on or off. Tap Return Arrow to return to the Home screen.

GloBrite & Dimmer Edit Button:

Tap this edit button to display the Dimmer level screen.

Note: To assign a GloBrite White Light or Dimmer circuit, go to Settings > Advanced System Configuration > Installation Setup > Circuits, page 96 and 100.

GloBrite White Light Dimmer Level: Use the Up/Down arrow button to increase or decrease the brightness levels of the light. Brightness levels are from 50%, 75% and 100% increments.

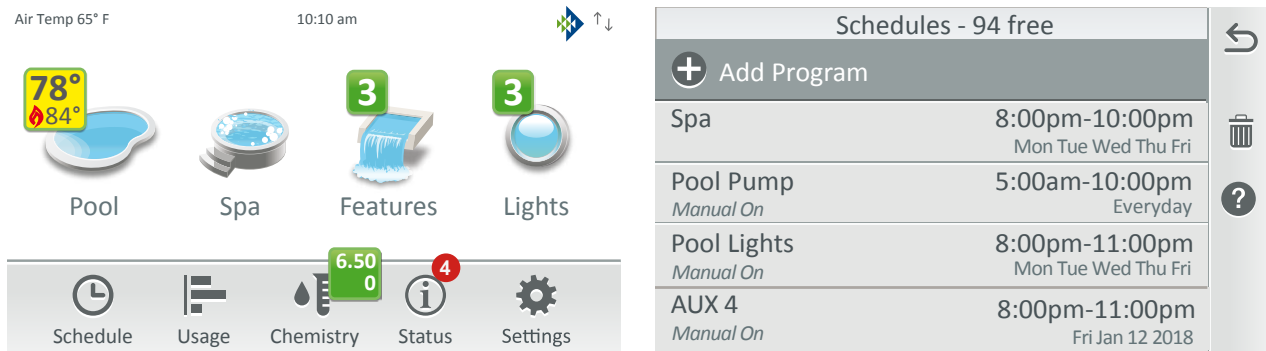

✓ **Check:** Tap Check to save changes and return to the Lights screen.

X button: Tap to return to the previous screen without saving changes.

SCHEDULE

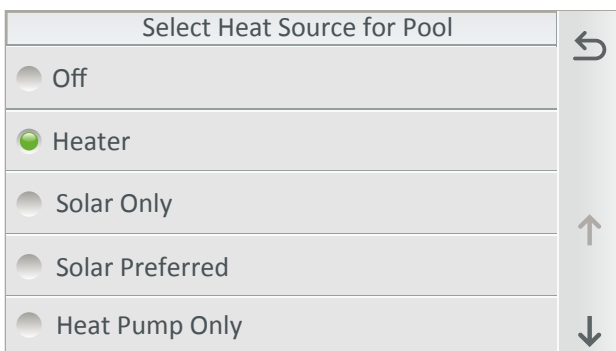

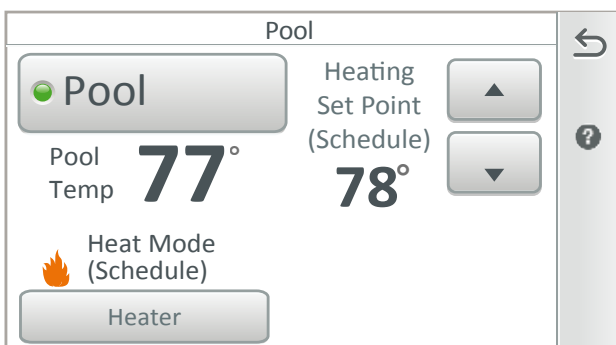

To access the Schedule screen, from Home screen tap Schedule: Select either a **Weekly**, or **One Time Only** schedule. From the Schedule screen you can add, delete, edit, enable and disable schedules. Tap the Add button (+) to add a schedule. To delete a program, tap the program from the list. Tap the Trash Can icon to delete the program from the list.

From the Schedule screen you can program On and Off times for circuits (AUX - auxiliary and Feature circuits). Circuits can be scheduled set to turn On or Off all days, weekends, weekdays, or any specific day of the week. Each 24 hour period, equipment (lights, heater, spa jets, filter pump) can be programmed for multiple On/Off times. You can also schedule which heat mode to use and also change the heat set point if necessary. The Schedule screen lists each scheduled circuit(s) start and stop time, and days to run.

One Time Only Timer: This schedule will switch equipment on for the specified amount of time. You can set the desired One Time Only schedule to run the pump for the specified time only.

Heater Cool Down: Default enabled. Provides a two minute-delay in turning off the circulation pump after heater has completed its firing cycle to allow the heater to cool down. See page 131 for more information.

Don't Change (Schedule): If Don't Change is select as the heat source in the Schedules feature (Heat Source), When a schedule is active, you have the option to select a Heat Mode source from the Pool or Spa screen, which will be used every time the schedule is active. See Schedules 60.

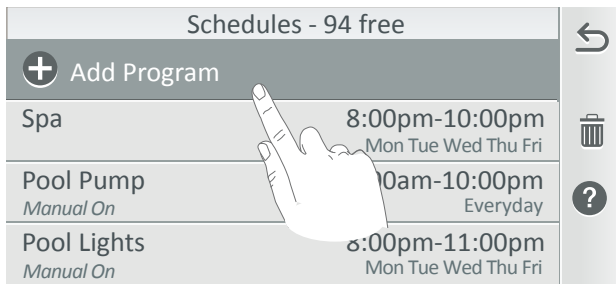

Heat Mode (Schedule) Options: Don't Change (use for Schedules only), OFF, Heater, Solar Only, Solar Preferred, Heat Pump Only, Heat Pump Preferred or Hybrid.

To create a heat source go to **Settings > Advanced System Configuration > Installation Setup > Heaters, See page 131 for more information.**

SCHEDULE - WEEKLY

Weekly Program: This feature will automatically schedule a circuit or a group of circuits to switch on and off at a specific start and stop time and day. Circuits can be scheduled to turn On or Off all days, weekends, weekdays, or any specific day of the week. Each 24 hour period, equipment (lights, heater, spa jets, filter pump) can be programmed for multiple On Off times. You can also schedule which heat mode to use and also change the heat set point if necessary. The Schedule screen lists each scheduled circuit(s) start and stop time, and days to run.

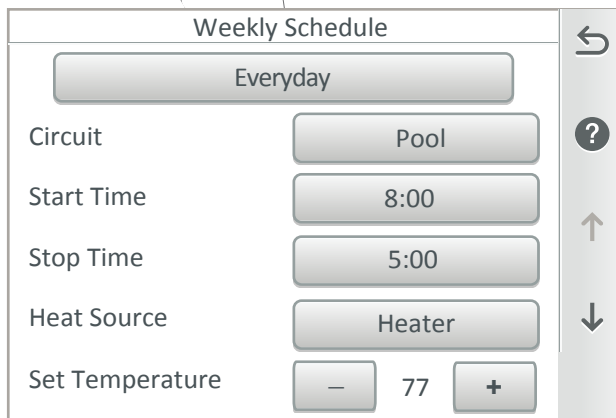

Add a Program: From Home screen tap **Schedule > Add Schedule > Weekly** to add a new schedule. Note: If the system is in Vacation Schedule mode, the Home screen Schedule icon will change to Vacation text, see page 78.

Delete Program: Tap the Trash Can icon and select the schedules to delete from the list, then tap Check and the Yes button to delete.

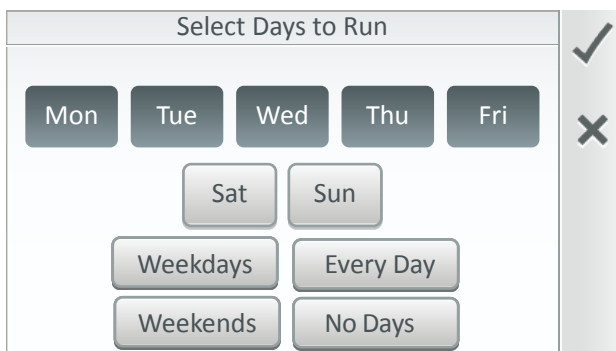

Weekly: Tap **Weekly** to display the available AUX (auxiliary) circuit, Feature circuits and Groups (circuits and Feature circuits) as defined in the Circuits screen, see page 96.

Everyday: Tap Everyday and select the days of the week (Mon-Sun), Weekdays, Weekends, Every Day, or No Days to run the schedule. Tap Check to save and return to the previous screen.

Circuits: Tap Circuit and select a circuit from the assigned circuits list. Note: Heat Source and Set Temperature options only display for Pool and Spa circuits. Use these options to schedule your pool/spa heater to heat the water at a specified time.

Heat Source Options: Select: Don't Change (use for Schedules only), OFF, Heater, Solar Only, Solar Preferred, Heat Pump Only, Heat Pump Preferred or Hybrid. To assign circuits **see Settings > Advanced System Configuration > Installation Setup > Circuits and Feature Circuits.**

Start Time (Manual): Set the start time (am/pm) for the Weekly schedule.

Set Temperature - 77 +

Heat Source: Select: Don't Change (use for Schedules only), OFF, Heater, Solar Only, Solar Preferred, Heat Pump Only, Heat Pump Preferred or Hybrid. To create a heat source go to Settings > Advanced System Configuration > Installation Setup > Heaters, See page 131 for more information.

Weekly Schedule

Everyday

Circuit Pool

Start Time 8:00

Stop Time 5:00

Heat Source Don't Change

Set Temperature: Tap the Plus or Minus (+/-) button to set the Heat Source set point temperature from (40° F to 104° F). Note: This feature does not display when using Don't Change.

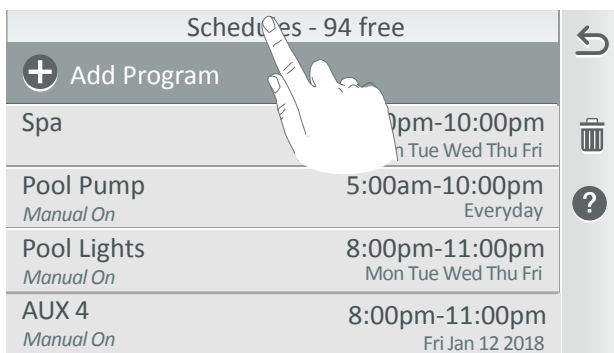

Don't Change Heat Source: Don't Change is only used when a schedule is running. The heater source selected from the Pool or Spa screen will be used every time the schedule is active. See Pool screen on page 51.

Manual OP Priority (Default ON): If this feature is set to ON, a circuit can be manually switched OFF and switched ON within a scheduled program and will continue to run for a maximum of 12 hours or whatever that circuit Egg Timer is set to, after which the scheduled program will resume if the schedule has not ended before the Egg Timer has expired. See Settings > General page 98 for more information.

SCHEDULE - ONE TIME ONLY

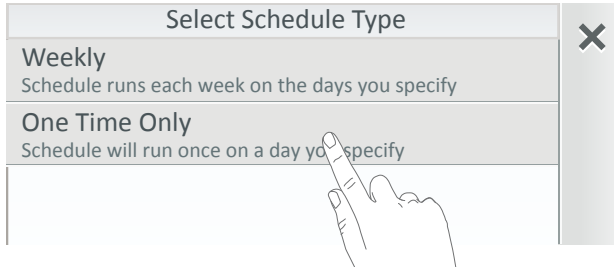

One Time Only: This feature will automatically schedule a circuit or a group of circuits to switch on and off at a specific start and stop time and day, for one time only. The circuit or group of circuits must be turned off manually or wait for the 12 hour automatic shut-off. However, the 12 hour factory shut off time can be changed by setting a new run time in the Egg Timer. See Egg Timer feature in the Circuits settings (Settings > Advanced System Configuration > Installation Setup > Circuits, see page 110). For example, you could set up the program to pre-heat your spa ready for your arrival. After the scheduled One Time Only program is completed, it is automatically erased. If the heater and pump already are on a schedule and the equipment is off, the One Time Only timer will switch it on for the scheduled time that has been set.

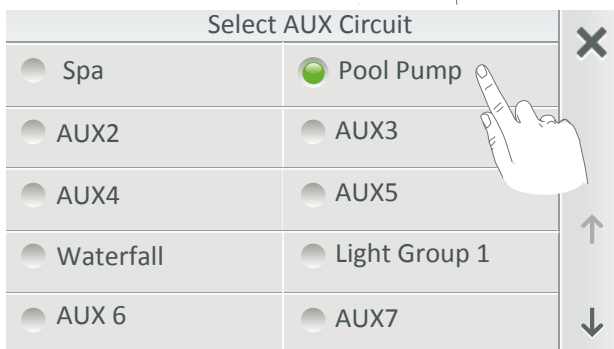

Add a Program: From Home screen tap **Schedule > Add Schedule > One Time Only** to add a new schedule.

Note: If the system is in Vacation Schedule mode, the Home screen Schedule icon will change to a Vacation text, see page 78.

Delete Program: Tap the Trash Can icon and select the schedules to delete from the list, then tap Check and the Yes button to delete.

One Time Only: Tap **One Time Only** to display the available AUX (auxiliary) circuit, Feature circuits and Groups (circuits and Feature circuits) as defined in the Circuits screen (see page 96).

Circuits: Tap Circuit and select a circuit from the assigned circuits list.

Note: Heat Source and Set Temperature options only display for Pool and Spa circuits. Use these options to schedule your pool/spa heater to heat the water at a specified time.

Note: To assign circuits see Settings > Advanced System configuration > Installation Setup > Circuits and Feature Circuits, see page 115.

Manual OP Priority (Default ON): If this feature is set to ON, a circuit can be manually switched OFF and switched ON within a scheduled program and will continue to run for a maximum of 12 hours or whatever that circuit Egg Timer is set to, after which the scheduled program will resume if the schedule has not ended before the Egg Timer has expired. See Settings > General page 98 for more information.

SCHEDULE - ONE TIME ONLY

Scheduled One Time Only

Fri, Jan, 12 2018

Circuit: Pool

Start Time: 8:00

Stop Time: 5:00

Heat Source: Heater

Set Temperature: 77

Start Time (Manual): Set the start time (am/pm) for the Weekly schedule.

Select Start Time

Manual | Sunrise | Sunset

1 : 00 AM

Duration: 8h 00m

Duration: Start time duration: The equivalent time left after the start time is established (e.g. 1:00 AM to 9:00 AM). The system clock calculates the duration between the start and stop time which is 8 hours. 24 Hrs. duration is display when the Start/Stop time is set to 8 AM to 8 PM. Note: To offset Sunrise and Sunset start time.

Select Stop Time

Manual | Sunrise | Sunset

9 : 00 AM

Duration: 8h 00m

Stop Time (Manual): Set the stop time (am/pm) for the Weekly schedule. see page 77.

Duration: Stop time duration: The equivalent time left after the start time is established (e.g. 1:00 AM to 9:00 AM). The system clock calculates the duration between the start and stop time which is 8 hours. 24 Hrs. duration is display when the Start/Stop time is set to 8 AM to 8 PM. Note: To offset Sunrise and Sunset start time, see page 77.

Scheduled One Time Only

Fri, Jan, 12 2018

Circuit: Pool

Start Time: 8:00

Stop Time: 5:00

Heat Source: Heater

Set Temperature: 77

Heat Source: Select: Don't Change (use for Schedules only), OFF, Heater, Solar Only, Solar Preferred, Heat Pump Only, Heat Pump Preferred or Hybrid. To create a heat source go to Settings > Advanced System Configuration > Installation Setup > Heaters, See page 131 for more information

Set Temperature: Tap the plus or minus button to set the Heat Source set point temperature from 40° F to 104° F.

Don't Change Heat Source: Don't Change is only used when a schedule is running.

The heater source selected from the Pool or Spa screen will be used every time the schedule is active. See page 51.

SCHEDULE - OFFSET THE SUNRISE / SUNSET TIME

Sunrise & Sunset Start & Stop Time: The Sunrise and Sunset times are based on the system date and time established from the area and location (zip code and time zone setting) of the system, see Setting > General > Location > Date & Time. See page 94 for details.

The IntelliCenter™ Control System clock can be manually set or synchronize from the Internet clock. If you select to use the Internet clock your computer clock should be connected to the your Internet domain to synchronize automatically with a network time server, then the IntelliCenter Control System clock will be in sync with your computer time. Be sure your computer has a continuous Internet connection to maintain automatic clock synchronization.

Sunrise Start Time (Hours/Minutes): The schedule start time set by the IntelliCenter Control System clock in sync with your computer Internet time.

Before/After Offset: Select Before to adjust the Sunrise start or stop time for a schedule.

Sunrise Stop Time (Hours/Minutes): The schedule stop time set by the IntelliCenter Control System clock in sync with your computer Internet time.

Before/After Offset: Before to adjust the Sunrise start or stop time for a schedule.

How to Use the Sunset Offset Setting

The following example describes how to offset the schedule Sunset time two hours before the actual sunset time. This allows you to schedule the heater/pump circuit to start heating the spa before the sunset, so you can enjoy the sunset in your heated spa.

Select Start Time

Manual Sunrise Sunset

4:55 PM Duration 16h 05m

▲ ▲

▼ ▼

Start/Stop Time Screen: Set the start and stop time for the program.

USAGE (SUMMARY VIEW)

To access the Usage screen, tap the Usage icon on the Home screen. The Historical Usage data is saved when using the IntelliCenter™ Control System Outdoor, Indoor Control Panels and Wireless Remote.

Summary View			
	-	+	Edit
Time Period: 30 days			
Items	This Period	Last Period	
Air Temp	H:78°/L:59°	H:74°/L:57°	
Pool Water Temp	H:75°/L:58°	H:80°/L:60°	
Spa Water Temp	H:104°/L:90°	H:102°/L:85°	
Gas Heater Usage	25 %	36 %	
Pool Pump Usage	37.5 %	25.7 %	
Spa Pump Usage	32.5 %	30.4 %	

Summary View

Summary View

Usage Screen: Displays up to six months of system historical usage data. Tap the - Minus or + Plus button to select the desired Time Period to view the items. The Time Period selection range is one day, two days, one week, one month, three months or six months.

Usage items: You can select any of the following six items to display on the Summary View screen. The items are: Any of the following six items can be displayed on the Summary View screen: Air Temp, Pool Water Temp, Spa Water Temp, Solar Temp, Gas Heater, Heat Pump, UltraTemp (Hybrid), Pool Pump, Spa Pump, Dual Speed Pump, IntelliFlo (VS, VSF, VF), pH Data, ORP Data, pH Feed Time, ORP Feed Time. Note: Up to 6 months of historical usage date can be stored on intellicenter.com.

Edit Pencil icon: Tap the Edit Pencil button to access the Edit Summary View screen (see next page). From the Edit Summary View screen you can arrange the usage items listing order (1-6) and also select other system items to display. See the complete Usage Item list as shown above (Usage Items).

Summary View: Minus and Plus Buttons: Tap the - Minus or + Plus button to select the desired Time Period to view the items.

This Period, Last Period: This Period displays the current system usage date compared to the Last Period date selected. The current time period is displayed on the bottom of the screen.

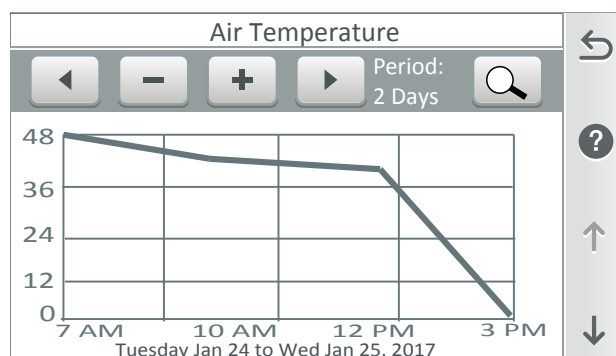

Graph View Icon (first graph icon right side of the screen)

Tap the first Graph icon on the Summary View screen to access a graph view of the displayed Usage Items (1-6). Note: See Settings > Advanced System Configuration > Import/Export to export status logs to a USB device, page 126.

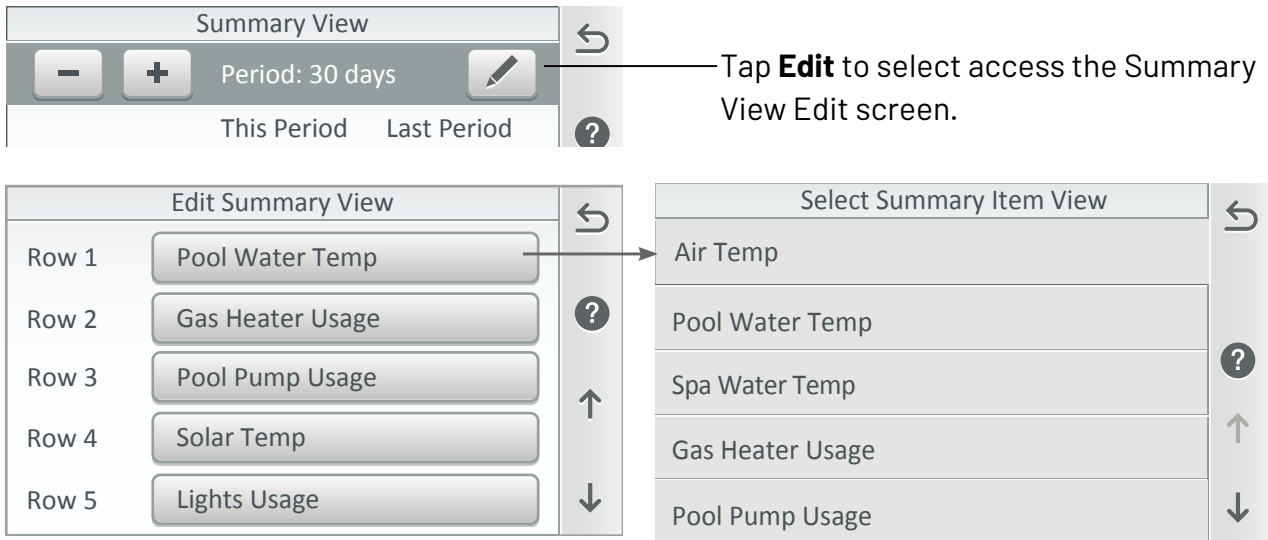

Graph Icon: Tap this icon to display a graph view of the Summary View items (1-6).

Graph Icon: Tap this icon to display a visual comparison of a preset list of items (Heater vs Pump Usage). See page 81.

Graph Icon: Tap this icon to display a graph view comparison of a preset list of items. See page 81.

USAGE (EDIT SUMMARY VIEW)

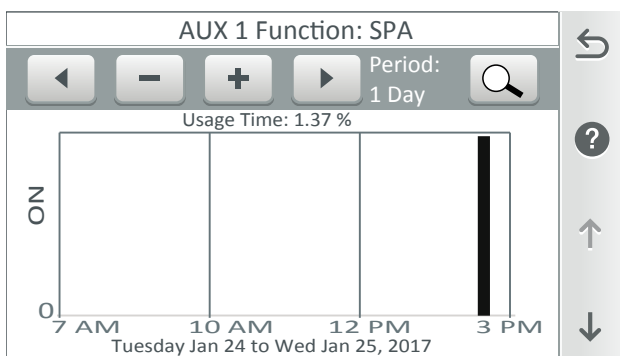

Tap **Edit** to select access the Summary View Edit screen.

Change the Summary Usage List Order (1-6): To change the Summary Usage List order, tap on any Row number item name (1-6), then from the next screen select the new item to display on that Row (Edit Summary View). Tap Return to return to the previous screen to view the updated list order. Note: See Settings > Advanced System Configuration > Import/Export to export status logs to a USB device, page 126.

Select Summary View Item: Displays the Usage Items: Air Temp, Pool Water Temp, Spa Water Temp, Solar Temp, Gas Heater, Heat Pump, UltraTemp, Pool Pump, Spa Pump, Dual Speed Pump, IntelliFlo (VS, VSF, VF), pH Data, ORP Data, pH Feed Time, ORP Feed Time). Tap on an item to corresponding to the select row (1 through 6). Tap Return to return to the previous screen.

Edit Summary View (AUX circuits usage)

This Graph view displays a detailed view of the historical usage data items. Tap the Graph icon to access the view graph usage screen. On the second screen, each usage is displayed on a graph. For more information.

Usage History Summary View screen: (Tap the Graph Icon (lower right side of the screen)):

- Minus or + Plus Button: Tap the to select the desired Time Period to view the items. The Time Period selection range is one day, two days, one week, one month, three months or six months.

Left and Right Buttons: Use these buttons to scroll through a selected items details.

Magnifying Glass Button: Tap the magnifying glass button the to display the highest usage data for the selected item. Tap the button again to display the lowest usage data.

GRAPH VIEW ICON (2ND GRAPH ICON) COMPARE PRESET ITEM LIST

Tap the first Graph icon on the Summary View screen to view the preset item comparison list. See list below. Tap the Down arrow button to scroll through the graph items.

- Minus or + Plus Button: Tap the to select the desired Time Period to view the items. The Time Period selection range is one day, two days, one week, one month, three months or six months.

Left and Right Buttons: Use these buttons to scroll through a selected items details.

Magnifying Glass Button: Tap the magnifying glass button the to display the highest usage data for the selected item. Tap the button again to display the lowest usage data.

Usage (Graph) Comparison Items

This Graph displays a detailed usage view of the preset items for a selected time period (up to six months). To access the compare graph, tap the lower Graph icon on the Summary View screen.

GRAPH VIEW ICON (2ND GRAPH ICON) COMPARE PRESET ITEM LIST

Magnifying Glass Button: Tap the magnifying glass button to display the highest usage data for the selected item. Tap the button again to display the lowest usage data.

Up and Down Arrows: Use the Up or Down arrow to scroll through the preset usage items. The preset usage items are: Pool Water Temp, Spa Water Temp, Air Temp, Pool %, Spa %, Gas Heater %, Solar Heat %. After scrolling to the last item, continue to tap the Up/Down button to return to the Summary View. Also, tap the Down arrow (right side of graph screen) to display system configured AUX circuits usage data.

CHEMISTRY (INTELLICHEM® / INTELLICHLOR® - PH MEASUREMENT)

To view the (IntelliChem) Chemistry Summary screen tap the Chemistry icon on the Home screen. Tap the UP arrow on the screen to display the next page (Page 2 of 2) to view the Pool Output and Spa Output chlorine percentage values. If an IntelliChlor SCG is installed, tap the Up arrow on the screen to display the IntelliChlor SCG screen. To add an IntelliChem and/or IntelliChlor device to the system, see Advanced System configuration > Installation Setup > Chemistry, on page 117. Note: To display pH and ORP readings on Home screen Chemistry Icon, see Settings > General > Chemistry Readings Badge(Set to ON). See page 85.

pH Value

pH value is the measurement of the acidity (0 to 7) or alkalinity (7 to 14) of the pool water. The pH low and high alarm set point values are preset at the factory to 6.7 and 7.9. For a pool, the advised ideal pH is between 7.2 - 7.8 (a pool professional should regularly check the water for metal presence, cyanuric acid levels and TDS (total dissolved solids). To maintain accurate pH pool water measurements, regular maintenance of the pH probe is advisable. pH probe calibration is necessary before the summer season.

IntelliChem Chemistry Controller Screen: Tap Up arrow to view Page 2 of 2.

The image shows two screenshots of the IntelliChem Chemistry Summary screen. The left screenshot is the main summary screen, titled "Chemistry Summary". It displays "Pool/Spa" status with "FLOW ON" and "Temp 74 °F". Below this are three data cards: "pH 7.69" with a "Set: 7.50" and a "Monitoring" button; "ORP 316 mV" with a "Set: 750 mV" and a "Dosing" button; and "Balance -0.99" with "Salt: 0 ppm" and a "Very Low Salt" button. The right screenshot is titled "(IntelliChlor) Chemistry Summary Page 2 of 2". It shows "Pool Output (%)" at 50 and "Spa Output (%)" at 35, each with minus and plus buttons. Below this is a "Salt Low" warning: "The salt level in the chlorinator is low".

Tap **pH** to select the pH setting screen.

The image shows the "IntelliChem 1 pH Settings" screen. It features a "Set Point" of 7.5 with up and down arrows, and a "Readout" of 6.34 with a down arrow. There is a "Tank Adjust" section with up and down arrows and a vertical tank indicator with 6 segments. A "pH Low" warning is displayed at the bottom: "The pH has been under or at the Low Alert threshold for the configured duration."

pH Reading/Set Point/Tank: Displays the current pH level reading. Tap the **Set Point Up/Down button** to adjust the pH set point value. The adjustable range is from 7.2 to 7.6 in increments of 0.1. The default pH set point value is 7.5.

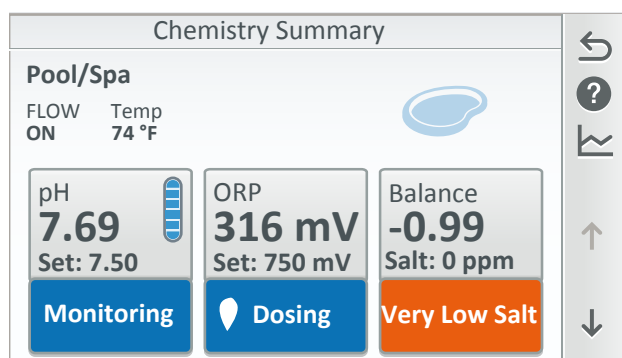

Tank: Tap the tank segment (1-6) to match the amount of muriatic acid currently in the canister. The canister can hold a maximum of 3-1/2 gals. of muriatic acid.

The Tank indicator (1-6 segment) is a visual representation of the amount of muriatic acid currently in the external canister. Tap the Up or Down button to match the amount of muriatic acid in the canister.

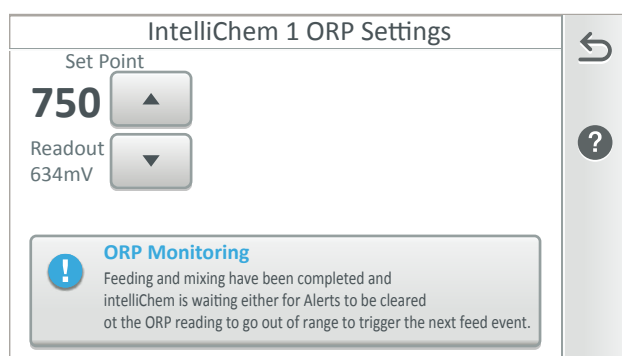

CHEMISTRY (ORP MEASUREMENT)

Oxidation-Reduction Potential (ORP) is the concentration level of disinfectant (chlorine, bromine, active oxygen) present in the pool water. It is advised to keep this measurement between 400 mV and 800 mV. To maintain accurate ORP pool water levels, regular maintenance of the ORP probe is advisable. ORP probe calibration is necessary before the summer season.

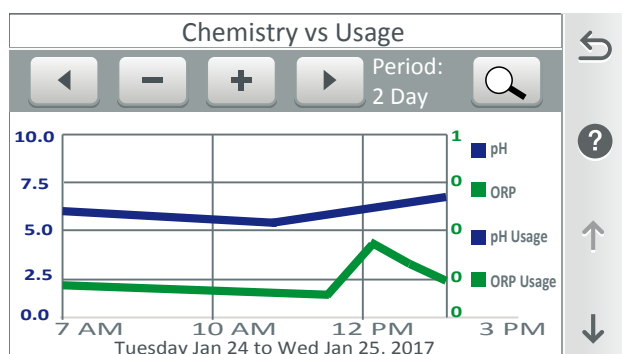

Tap **ORP** to select the ORP setting screen.

ORP Reading/Set Point: Displays the current ORP level reading. Tap the **Set Point Up/Down button** to adjust the ORP set point value. The adjustable range is from 400 to 800 in increments of 10. The default ORP set point value is 700.

IntelliChem ORP Control Chlorination: The IntelliChem Controller will constantly measure ORP and will increase or decrease chlorine production based on a preset setpoint that you have determined. The system will automatically monitor ORP and produce the correct amount of chlorine to maintain the preset level. If the ORP level is manually set, the amount of chlorine produced is based on this setting.

ORP Setpoint: The setpoint for the ORP level is measured in mV. 700mV is the default value. The IntelliChem Controller monitors the ORP and produces the proper amount of chlorine to maintain this setpoint.

Usage (Graph) pH & ORP Comparison: Tap the Graph icon on the right of the Chemistry Summary screen to display a detailed view of the pH and ORP usage for a selected time period (up to six months).

Note: Use the Up/Down arrow to scroll through the graph.

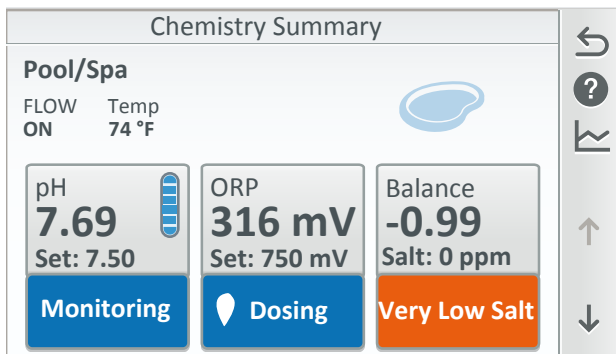

CHEMISTRY (WATER BALANCE)

To view the current water balance, tap **Water Balance** on the Chemistry Summary dialog box. The Water Balance Settings screen is displayed.

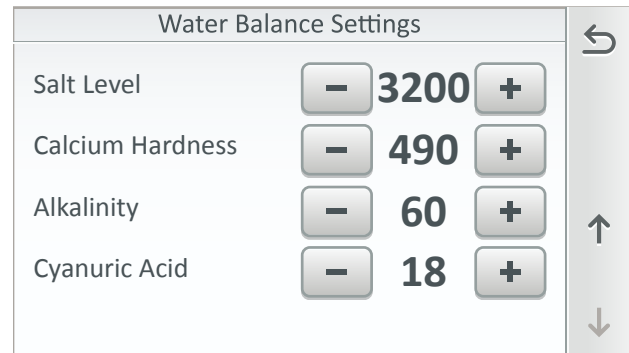

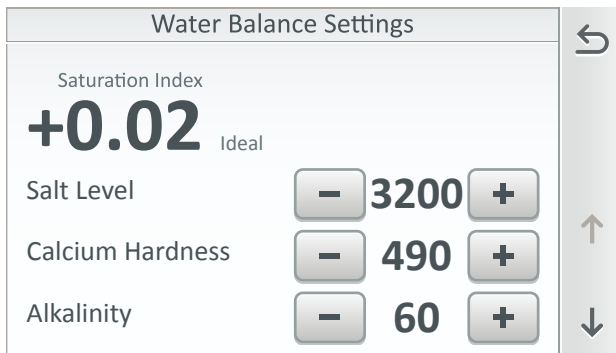

Water Balance Summary

The Water Balance Setting screen displays the current water balance and salt levels. The Calcium Hardness, Alkalinity and Cyanuric Acid values can also be adjusted based on manual water tests to allow the water balance number to be calculated. Note: A Saturation Index value of 0 indicates the water is chemically in balance. If the Index is a minus (-) value, corrosive tendencies are indicated. If the Index is a plus (+) value, scale-forming tendencies are indicated. A Saturation Index value between +0.5 to -0.5 is considered satisfactory in a swimming pool.

Tap **Water Balance** to select the pH setting screen.

Water Balance Settings: Tap - / + button to adjust settings.

Recommended Pool Chemistry:

- pH:** 7.2 - 7.8 (use Muriatic acid to lower pH and Soda Ash to raise pH)
- Combined Chlorine (Chloramines):** None (super chlorinate to remove all chloramines)
- Chlorine:** 1.0 - 3.0 ppm
- Cyanuric Acid:** 30 - 50 ppm
- Total Alkalinity:** 80 - 120 ppm
- Calcium Hardness:** 200 - 400 ppm

- Salt:** 3000 - 4500 ppm (ideal 3400 ppm)
- Metals:** (Copper, Iron, Manganese): None
- Nitrates:** None
- Phosphates:** Less than 125 ppb
- Total Dissolved Solids:** below 5000 ppm

CHEMISTRY (INTELLICHLOR® SALT CHLORINE GENERATOR)

To view the (IntelliChem) Chemistry Summary screen tap the Chemistry icon on the Home screen. Tap the Up arrow on the screen to display the next page (Page 2 of 2) to view the Pool Output and Spa Output chlorine percentage values for the IntelliChlor SCG.

Note: To install an IntelliChlor SCG, see Advanced System configuration > Installation Setup > Chemistry, on page 117. See IntelliChlor Salt Chlorine Generator (Page 2 of 2).

Alerts and Notifications: Setup alerts/warnings and pool/spa equipment status information to display (Green Badge) and specific status information in the Home screen Status screen. See page 85.

Security: Enable passcode protection for the IntelliCenter™ Control System. Setup system Administrator and Guest passcode. See page 85.

Pentair User Portal: Login or Create New Account (enter contacts email address, property name, password). The system will attempt to connect to the account email address (via the Internet). See page 87.

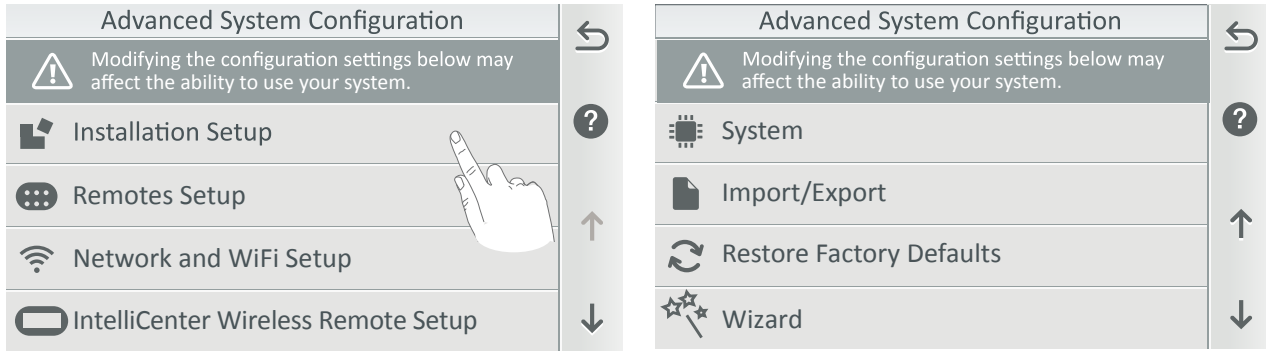

Groups: Add LIGHTS and CIRCUITS Groups of circuits for one touch button On/OFF control. Group circuits are displayed in Features, Lights screens on the Home screen. See page 88.

System Reboot: Tap System Reboot to restart the system (Outdoor, Indoor Control Panel and Wireless Remote). To cancel system reboot, tap Cancel before 4 seconds. See page 93.

Advanced System Configuration Options: Go to [Settings > Advanced System Configuration](#), see page 92.

Advanced System Configuration Options: To access the Advanced System Configuration options, **go to Settings > Advanced System Configuration, page 92.**

Advanced System Configuration Options Summary:

Installation Setup: Configure the IntelliCenter™ Control System system. Body Configuration (page 95), Circuits (page 96), Pumps (page 102), Heaters (see page 112), Valves (page 115), Chemistry (page 117).

Remotes Setup: Add Spa-Side Remote: Select Spa Command or iS4. See page 119.

Network and WiFi Setup: Configure Ethernet, Connect to a Wireless Network (SSID), Adjust Wireless Transmit Power, Internet Connection, and Reboot WiFi Device. See page 121.

IntelliCenter Wireless Remote Setup: Set up the wireless remote. See page 123.

Delay Settings: Valve Delay ON/OFF, Heater Cool Down ON/OFF, Freeze Cycle Time (min), Spa Freeze Override (min) and Override Delays. See page 124.

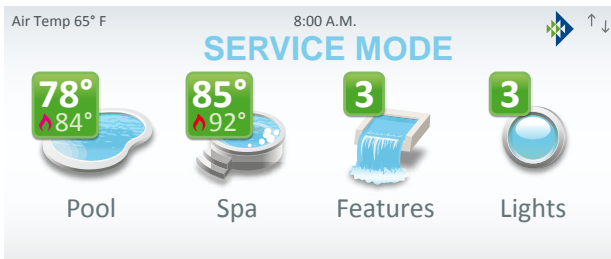

System: System Information, Detected Hardware, Firmware update. See page 125.

Import / Export: Import System Configuration, Export System Configuration, Export Status Logs. See page 126.

Restore Factory Defaults: Overwrite the current system configuration with the default factory settings. Follow the screen prompts. See page 128.

Setup Wizard: Configure the system using the step-by-step setup wizard assistant. See page 131.

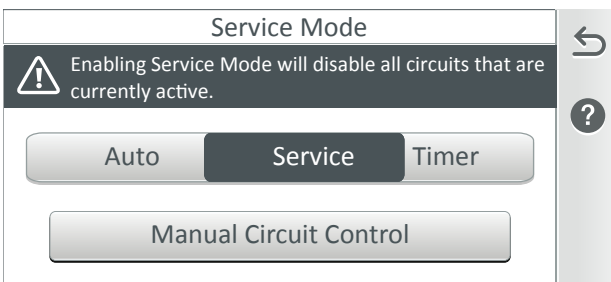

SERVICE MODE

Service Mode: Service and Timer mode is used for pool/spa maintenance or service purposes to manually control and test system equipment. During Service mode, the Outdoor Panel, Indoor Control Panel and Wireless Remote Home screen will display SERVICE MODE. All system auxiliary circuits will be disabled once Service or Timer is selected. When AUTO is selected, normal operation will resume and the system will not be in service mode.

Note: If the panel is passcode protected, enter the four digit assigned passcode, see page 85 for details.

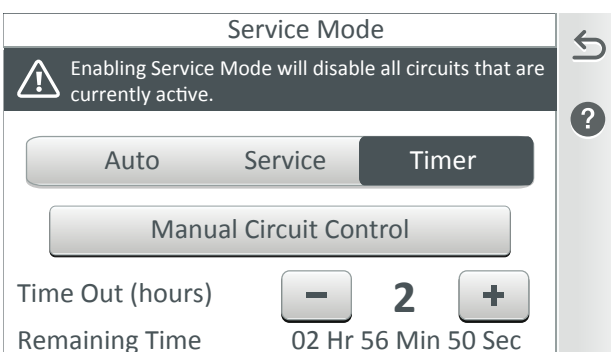

Auto: When Auto is selected it indicates that the system is operating normally and not in Service or Timer mode.

Service: When Service is selected, all system auxiliary circuits will turn OFF. To enable auxiliary circuits select Manual Circuit Control and choose the system auxiliary circuits to turn on/off.

Manual Circuit Control: Choose the auxiliary circuits to allow manual control for shared equipment or dual equipment). Tap the circuit name to turn the circuit on/off. **Note:** For shared equipment, only one valve can be activated at a time.

Timer: Use the Timer mode to leave the system in service mode up to 24 hours and automatically return to Auto mode (normal system operation) after the maximum hours set has elapsed. Set the count-down timer from 1 to 24 hours for selected circuits to remain in service mode.

Tap Manual Circuit Control and choose the circuits to enable. **Note:** Circuits selected in the Service Manual Circuit Control screen are retained in the Timer Manual Circuit Control screen.

VACATION MODE

If you are planning a vacation and want to create a pump/filter daily schedule while on vacation, you can setup a start and stop date to run a daily pool/spa filter schedule. When you return from vacation the system will continue with the previous non-vacation mode schedule.

Show Badge Colours - page 44

Location: The US Zip code, Latitude, and Longitude coordinates and Time Zone information will automatically populate via a Broadband Internet connection. You can also enter the information manually.

To enter information manually, tap the Location then Zip Code to enter your Zip code for your location. Tap Check to save. The US Zip code information will automatically populate the Latitude and Longitude coordinates and Time Zone via a Broadband Internet connection.

Time Zone (UTC): Use the - and + button to set your time zone if no Internet connect is available. UTC-05:00 (Brooklyn New York) is a time offset that subtracts five hours from Coordinated Universal Time (UTC). In North America, it is observed in the Eastern Time Zone during standard time, and in the Central Time Zone during the other eight months (see Daylight saving time).

The western Caribbean uses it year round. **Note:** Time and date synchronization for all systems may take a few minutes.

Date & Time: The displayed date and time on the General screen is synchronized with the Internet connection time. If needed. Tap Date & Time to manually change the IntelliCenter System Control System clocks, including the Outdoor, Indoor, and Wireless Remotes. If the PC time and date do not

DATE & TIME (GENERAL)

Date & Time	
Mode	<input type="radio"/> Manual
Clock Mode	<input type="radio"/> 12h
Daylight Savings	<input type="radio"/> ON
Time Set	<input type="text" value="11:49p"/>
Date Set	<input type="text" value="Jan. 12, 2018"/>

Time Set: Manually set IntelliCenter system controller time, am/pm. If the system is connected to the Internet, resetting the system date will override the Internet time.

Date Set: Manually set IntelliCenter system controller date. If the system is connected to the Internet, resetting the system date will override the Internet date.

Offset (min/month): Sets the month offset from 0 to 120 (e.g. leap years).

Mode: Manual: Date and time is manually entered.

Internet: Date and time retrieved from the Internet.

Clock Mode: Select either 12-hour am-pm clock, or 24-hour military time (e.g 12:00 midnight is 24:00 hours).

Daylight Savings: Set to ON will adjust the time automatically for the region you are located in. Offset (min/month): Sets the month offset from 0 to 120 (e.g. leap years).

Units (General)

Units	
<input checked="" type="radio"/> English U.S. Standard Units: GPM, F $^{\circ}$, fl. oz.	↩
<input type="radio"/> Metric International Standard Units: l/min, $^{\circ}$ C, ml	

Units: Sets the system units of measure to English or Metric. Set values to display English US Standard Units: GPM, Fahrenheit (F) degrees, Fl, oz) or Metric International Standard Units: L/min, Celsius (C) degrees, ml.

Features & Lights Order (General)

Use this feature to define the order of the circuits displayed on the Features and Lights screens. For example, the order of the named circuits can be displayed alphabetically (up and down) or left to right.

Features and Lights Lists Order	
List Order	<input type="radio"/> Alphabetically
Grid Display	<input type="radio"/> Left to Right
Reset	<input type="button" value="Clear Order Lists"/>

List Order (User Define): Tap List Order and select the list order: Alphabetically (Default): Sort in ascending name order.

Most Recent: Sorted in descending from most recently used.

Most Frequent: Sorted in descending from most frequently used.

Custom Order: User defined order.

Grid Display: Select Left to Right (Default) or Top to Bottom.

Select Grid Flow	
<input checked="" type="radio"/> Left to Right Sort items starting at top left to right going down	↩
<input type="radio"/> Top to Bottom Sort items starting at top to bottom going right	

Set Grid Flow: Select Left to Right or Top to Bottom.

Reset: Tap Clear Order Lists to reset the List order and Grid Display to default settings.

BACKLIGHT (GENERAL)

Backlight			
Brightness Level	-	85	+
Dimness Level	-	15	+
Dim Display (m)	-	5	+
Turn Off Display (m)	-	15	+

Backlight			
Brightness Level	-	85	+
Dimness Level	-	15	+
Dim Display (m)	-	5	+
Turn Off Display (m)	-	15	+
Deep Sleep Mode	ON		
Deep Sleep Time (Hr)	-	1	+

Back Light: Brightness Level: Adjust the screen brightness level from 33 to 100%.

Dimness Level: Adjust the contrast level from 10 to 100%.

Dim Display (min): While in other screens, sets the time to return to the Home screen (from 0 to 240 minutes (20 hrs).

Turn Off Display (min): Set the time to turn off the screen from 0 to 240 minutes (20 hrs). Note: The time set to turn off the screen also affects the start time of the Deep Sleep feature, see below for more information. Also see Day/Night Theme Selection Settings > Advanced System Configuration > General > Day/Night Theme, page 84.

Wireless Remote only:

Battery Conservation Mode (Deep Sleep):

Tap Deep Sleep Mode to turn on this feature. The default setting is ON. This feature allows you to save the battery life while the Wireless Remote is in its cradle.

Wireless Remote
(in cradle)

Deep Sleep (Hr): Deep Sleep time can be set from 1 to 3 hours (Default 3 hrs.). Select when you want the device to go to sleep to conserve battery life.

General List Order

Example: While device is of its cradle: Go to Settings > General > Backlight. Tap On to turn on Deep Sleep. The default setting is (ON). The Deep Sleep time is set for three hours. The device will go in to Deep Sleep after the screen goes black which will start after current time set in the **Turn Off Display** feature. The device is now in save battery mode. The device is still responsive up to an hour, so you can still use the device. This will stop Deep Sleep mode, then the Backlight settings are in effect. Any screen where there is a list can be displayed alphabetically or based on the system definition (default).

General List Order	
<input checked="" type="radio"/> Alphabetically Sorted in ascending order	↩
<input type="radio"/> System Sorted based on System index	

General List Order: Lists order of installed equipment: Define the general list order based on Alphabetically (sorted in ascending order or System sorted on system index.

Select List Order: Sort Alphabetically, Most Recent, Most Frequent or Custom Order.

TEMPERATURE SENSOR CALIBRATION (GENERAL)

Temperature Sensor Calibration: List the installed IntelliCenter™ Control System sensors (ambient air, pool and solar (if installed)). The current sensor temperature is displayed. Tap sensor name bar to access Sensor Calibration screen.

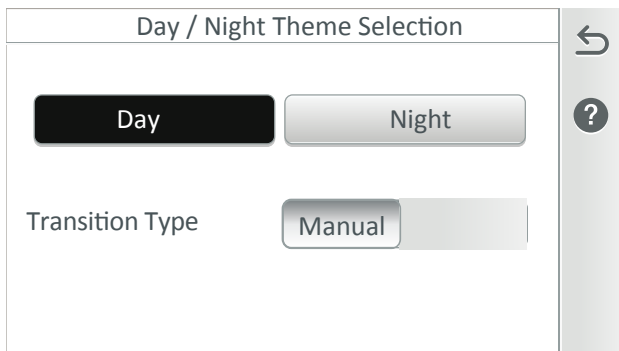

Sensor Calibration: Adjust the sensor temperature value. Use Up/Down arrow to Increase or decrease temperature value compared to actual reading. Tap Check mark to save setting. Tap X to exit without saving setting.

Temperature Sensor Calibration		↩
Water Sensor	75° F	
Solar Sensor	89° F	?
Air Sensor	72° F	

Temperature Sensor Calibration Procedure: Before you start, you need an accurate all weather thermometer. Calibrate the air sensor in the shade. The Home screen displays the Pool, Spa Water Temp and Air Temp setting. Calibrate the Spa and Pool temperatures the same way as described below for Water and Air temperature sensor. Be sure the air temperature sensor is located in the shade for accurate readings. To calibrate the air, pool and spa sensors:

1. First, tap the Pool or Spa button on the Temperature Sensor Calibration screen to switch on the spa or pool filter pump.
2. Tap Pool Sensor to start the pool calibration.
3. Place the thermometer in the spa or pool. Take an accurate temperature reading. When calibrating the air sensor, place the thermometer next to the air sensor. The sensor is normally located near or under the Power Centre enclosure, not inside the enclosure. Take an accurate temperature reading in the shade.
4. On the Calibrate Sensors screen, use the Up or Down buttons to raise or lower the Air, Pool and Spa temperature to match the corresponding thermometer temperature reading.
5. Press the OK Calibration button when done.

DAY / NIGHT THEME SELECTION (GENERAL)

Day/Night Theme Selection: Select either Day or Night screen contrast levels.

Day: In Day mode the LCD screen uses a white background for normal day light viewing.

Night: Select Night mode for low light conditions. This mode uses a black background with white text.

Transition Type:

Manual: Allows you to manually select either Day or Night Theme modes.

Auto: This option will automatically transition between Day and Night screen mode based on the IntelliCenter™ Control System 24 hour clock.

Manual Operation Priority (General)

Manual OP Priority:

ON: This feature allows for a circuit to be manually switched OFF and switched ON within a scheduled program, the circuit will continue to run for a maximum of 12 hours or whatever that circuit Egg Timer is set to after which the scheduled program will resume. This feature will turn off any scheduled program to allow manual pump override. The Default setting is OFF.

Manual Heat (General)

Manual Heat: ON (Default OFF): If a GAS heater is configured for the Spa, but the Heat Source is set to OFF in the Spa screen, enabling this option will result in the heater being temporarily enabled whenever the body is manually turned on. For more information, see 51 and 54.

Show/Hide Chemistry Readings Badges (General)

Show Chemistry Readings Badges (ON/OFF): Change this setting to ON or OFF to show or hide the pH and OPR readings badge (if an IntelliChem Controller is being used). The Default setting is OFF.

Show Badge Colours (ON/OFF) (General)

Badge Colours (ON/OFF): Change this setting to ON or OFF to show or hide the Pool and Spa colour badges (Yellow (Delays), Blue (manual enabled filter pump circuits)). The Default setting is ON. The badges are displayed on the Home screen Pool and Spa icons.

ALERTS & WARNINGS SHOWN IN STATUS (SETTINGS)

Alerts & Warnings Shown in Status	
Circuits	2/2
Pumps	5/8
MasterTemp Heater	1/13
IntelliChlor	Configure...
IntelliChem	1 / 17

Alerts & Warnings Shown in Status:

Displays a Badge icon on the Status Home screen icon for selected items show on this screen. See page 75.

Configure...: Tap on the Configure... option to display the selectable items for the displayed options. From the Select Shown in Status screen, tap on items or Select ALL items to shown on the Home screen Status icon.

If Configure is displayed on the option button, it indicates Alerts & Warnings Status Badge will not be displayed.

Circuits (2/2): Select 2 status conditions: Valves delay and heater cool down.

Pumps (8/8): Select up to 8 common pump and filter warnings and alarms.

Hybrid Heater (22/22): Select 22 status conditions: Air flow switch, temperature status, condensate filter, freeze and more.

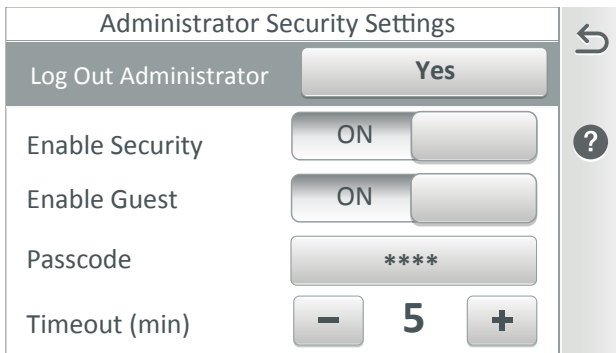

Chemistry IntelliChlor (5/5): Select up to five common IntelliChlor SCG warnings and alarms.

Chemistry IntelliChem(17/17): Select up to 17 common IntelliChem Controller related warnings, errors, alarms and more.

SECURITY (SETTINGS)

Enable Security (ON): (Only the Administrator can access this screen): Tap Administrator then tap ON to Enable Security. Enter a Passcode for the Administrator. To log out the Administrator, tap Administrator and Yes.

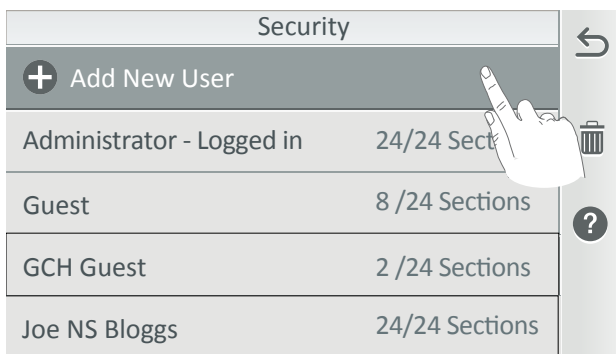

Log Out Administrator (Yes - No Passcode required): Tap Log Out Administrator to log out of the system and return to the Home screen.

Enable Administrator Security (ON/OFF): Tap ON to Enable Administrator Security. Tap OFF to disable Administrator Security (no Administrator or Guest passcode required to access the system).

Enable Guest: ON: The Administrator assigns a Guest access to the system without a passcode. From the Security screen, tap Guest, then tap Can Access and select the system Sections that the Guest has access to.

Passcode (**):** Displays the current Administrator 4-digit passcode (4 asterisks shown to omit the assigned Passcode). Tap the Passcode button to change the Passcode.

Timeout (min): Tap the plus or minus button to set the screen elapse time (1-10 minutes) before a screen message is displayed for the passcode. Note: A padlock icon displayed on the Home screen (top right) indicates there is an Administrator logged in (passcode assigned to the system).

Security: This screen shows the Administrator is logged in, and lists Guests assigned by the Administrator and their allowable system Sections. 0/24 Sections indicates no access to the system.

Administrator Log out: Tap Administrator to enable or disable the system security. To log out the Administrator, tap Yes.

SECURITY (SETTINGS)

USER Security Settings	
Name	Joe Bloggs
Can Access	10/24 Sections
Passcode	****
Timeout (min)	- 5 +

User List:

Tap a name to display the User Security Settings screen: Change the user name, passcode, access to sections and timeout setting.

Add New User (Admin must be logged in):

Tap Add New User, enter the new user's name. Select up to 24 sections that the user has access to. Up to 10 users can be assigned access to the sections. Tap Check to save the name and return to the previous screen. Note: Tap Guest to access the Guest Security Settings screen to allow the Guest to access 0 to 24 system settings. Note: A Guest account does not require a passcode.

Guest User has Access to these Checked Screens	
Select All	Deselect All

Web and Mobile Interface: Tap to access the Web and Mobile Interface screen. The default setting for Web Interface is ON. This enables the Web App and Mobile Interface which allows local network and Internet communications to your home network. To disable Web based and mobile interface, set to OFF.

Enable Web & Mobile Interface	←
Web Interface <input checked="" type="checkbox"/>	
The default setting for Web Interface is ON. This enables the Web based and mobile interface which allows local network and Internet communications with your home network. To disable Web based and mobile interface, set to OFF.	

Note To test the Internet connection see page 121.

Note: For the IntelliCenter™ Control System to connect to the Web requires connection of the Wireless Bridge Transceiver Antenna to the Outdoor main circuit board. For installation instructions, see the IntelliCenter Control System Installation Guide (P/N 522989).

Add New Account: Enter the owner's information, Email Address, Property Name, Password. The system will attempt to connect to the owner's account Email address (via the Internet) to www.intellicenter.com.

Connecting to your pool using the Web App: Go to www.intellicenter.com and sign in using the pool owner's user email address. Select your pool listed on the Installations screen to display the Home screen.

Login to Existing Account (www.intellicenter.com): Enter email address and password. The system will attempt to connect to the owner's account Email address via the Internet connection.

Update Owner Information: Edit owner information: Property Name, Name of Owner, Address, City, State, Zip Code, County, Time Zone, Phone number, Email. Location information is populated when entered in General > Location, Date & Time. See page 82.

View Connection Information: View server connection information: Last messages received, total number of server connects.

PENTAIR USER PORTAL (WWW.INTELLICENTER.COM (SETTINGS))

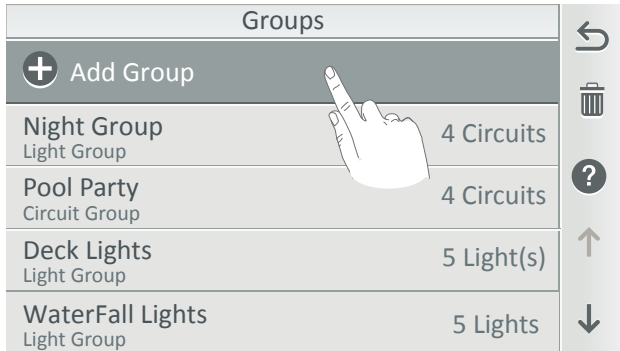

Add a new Account

1. Tap **Enable Web & Mobile Interface**. Change the toggle to **ON** and tap the Return arrow. Tap **Add New Account**. Tap **Property Name** and enter the name of the property, and tap the Checkmark. Tap **Email** and enter the users Email address, and tap the Checkmark. Tap the Checkmark to go to the next screen.
2. The users Email address should be shown on the first button. If it is not shown, tap the button and add it as described in the steps above. Tap **Enter Password** and enter a Password, then tap the checkmark. Note: The password should have a least one uppercase letter. Tap the Re-Enter Password button and retype the password, and tap the Checkmark. Tap the Checkmark to complete the process. Once the account setup is complete, return to the home screen and wait for the Pentair logo to appear which indicates you are connected to www.intellicenter.com and ready to remotely connect to your IntelliCenter Control System using your User Name and Password used previously.

GROUPS (LIGHTS / CIRCUITS) (SETTINGS)

The Groups feature allows multiple Light circuits and AUX circuits to be grouped together and assigned to one ON/OFF button that is displayed on the Home screen Lights Groups screen. Up to 40 groups of light circuits and AUX circuits can be assigned. Go to Settings > Groups to add a group of circuits. Note: A group of Light Circuits or AUX Circuits can be switched ON/OFF from one button in the Features/Groups screen, and the Lights/Groups screen.

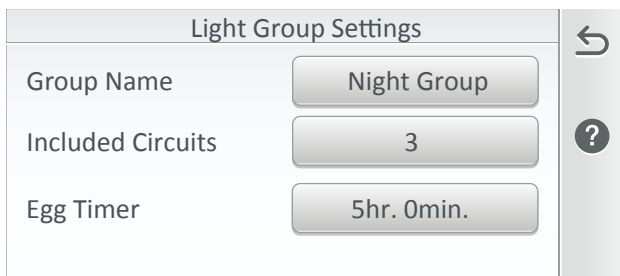

+Add Group (Lights or Circuits): Tap Add Group, and select either a Light Group or Circuits Group.

Light or Circuits (Group Settings):

Group Name: Tap the name button to access the keyboard. Enter a name for the group of lights or circuits.

Included Lights or Circuits: Tap the Included Lights (or Circuits) button to access the available circuits. The circuits displayed depend on the model of the Personality Card installed. Light circuits (AUX circuits) are assigned in the AUX circuits screen.

Egg Timer: Tap the Egg Timer button to display the Hours and Minutes button. Tap the Hours and Minutes button to select a manual time-out from 0 to 23 hrs. 59 mins. for the circuit. The Egg Time is a specified time delay (hrs/mins) for the circuit, once it is turned on manually.

GROUPS (LIGHTS / CIRCUITS) (SETTINGS)

AUX Circuits	
Spa Function: Spa	Spa
AUX 1 Function: IntelliBrite	Pool Light
AUX 2 Function: IntelliFlo	Pool Pump
Waterfall Function: Generic	Booster Pump
AUX 5 Function: Generic	AUX 5

AUX Circuits Screen

Don't Stop: Tap the Hours button until 23 hours is displayed, then tap the button again to display Do Not Stop. The Do Not Stop feature will continuously run the circuit until the it is manually turned off.

Nested Groups: You can create a Group of circuits within another Group of circuits, from the Lights and Circuits.

Delete Group(s): Tap the Trash icon, check the Group or Groups of to delete. Tap Yes to delete.

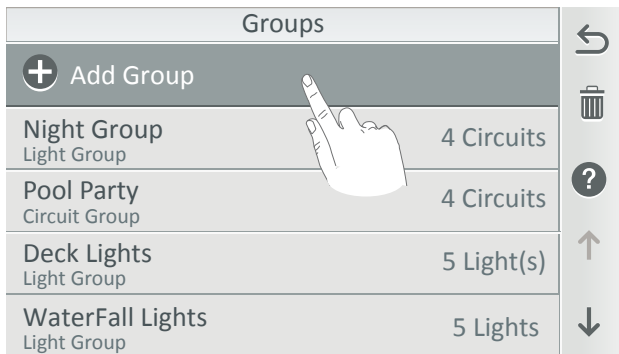

From the AUX Circuits (4 Dots Icon), you can also create a group of light circuits and AUX Circuits. Go to **Advanced System Configuration > Installation Setup > Circuits > AUX Circuit (page 96) and Feature Circuits (page 100).**

GROUPS (LIGHTS / CIRCUITS) (SETTINGS)

Use the Light Groups feature to group multiple light circuits together and assign them to one ON/OFF button on the **Home screen Features Groups screen**. Groups of circuits are displayed on the Lights screen (page 56), and Lights Groups (page 69).

+Add Group (Lights): Tap Add Group, and select Lights Group, and enter a name for the light group. Tap Check to save the Group name and continue to the Lights Group Settings screen. Tap the group name from the Groups list.

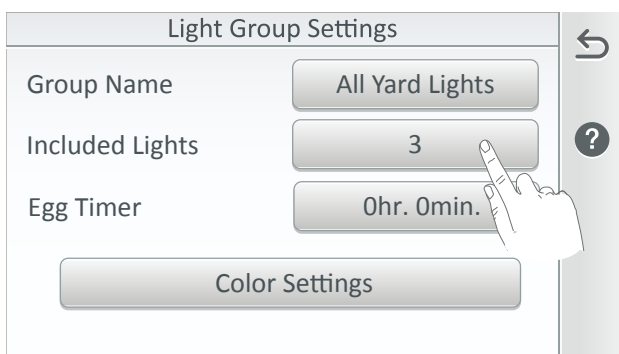

Delete Groups: Tap the Trash icon; check the desired Groups to delete. Tap Yes to delete.

Nested Groups: If necessary, it is possible to create a Group of circuits within another Group of circuits, as long as they are from the same group of Lights, and AUX Circuits.

Note: A group of light circuits or AUX circuits can be turned ON/OFF from one button in the Features (Circuits), Lights (circuits) screen on the Home screen. See page 56.

Tap the Included Lights button to access the available light AUX circuits. The displayed light circuits depend on the model of the Personality Card installed. AUX circuits are assigned in the AUX circuits screen. **For more information, see, Advanced System Configuration > Installation Setup > Circuits > AUX Circuit - OCP 0 or Feature Circuits, see page 96.**

Egg Timer: Tap the Egg Timer button to display the Hours and Minutes button. Tap the Hours and Minutes button to select a manual time-out from 0 to 23 hrs. 59 mins. for the circuit. The Egg Time is a specified time delay (hrs/mins) for the circuit, once it is turned on.

Dont Stop: Tap the Hours button until 23 hours is displayed, then tap the button again to display Do Not Stop. The Do Not Stop feature will continuously run the circuit until the it is manually turned off.

Groups (Lights) (Settings)

Light Group Settings	
Group Name	All Yard Lights
Included Lights	3
Egg Timer	0hr. 0min.
Color Settings	

Colour Settings: Tap this button to display the assigned light circuits and the current delay time and selected light colour.

Note: The Colour Swim Settings effect feature synchronizes any IntelliBrite® or Landscape colour lights. The colour swim effect starts from the first light, then the colour change is delayed across to the adjacent lights creating a wave delay effect. For more information about light features, see Circuit Function in Advanced System configuration > Installation Setup > AUX Circuits > AUX Settings (Circuit Function). See page 96.

Select Circuit to Edit	
Beach Light	Delay 0s White
Back Yard Light	Delay 15s Light Green
Pool Light	Delay 25s Green
Pool Light 2	Delay 35s Cyan
Spa Light	Delay 55s Blue

Select Circuit to Edit: Tap any of the the light names displayed to change the current light colour and delay time (from 0 to 60 seconds). Colour options are: White, Light Green Green, Cyan, Blue, Lavender, Magenta and Light Magenta.

Colour Name: The name of the light is assigned in the circuits screen. See page 96.

Select Swim Color	
<input checked="" type="radio"/> White	
<input type="radio"/> Light Green	
<input type="radio"/> Green	
<input type="radio"/> Cyan	
<input type="radio"/> Blue	

Colour: Tap the Colour button to display the Select Swim Colour screen. Select a different colour for the light from the list.

Delays(s): Tap the - /+ button to set the delay for the light from 0 to 60 seconds.

Color Swim Settings	
Color Name	Pool Light
Color	White
Delays(s)	- 0 +

GROUPS (FEATURE CIRCUITS (GENERIC OR SPILLWAY) (SETTINGS)

Delete Circuits: Tap Feature Circuits, tap the Trash icon, select the circuit(s) to delete, then tap X to delete the circuit(s) and exit to the previous screen.

Feature Circuits Overview

Up to 32 individual Feature Circuits can be configured to combine various circuits together to a single ON/OFF button so that they can be turned on or off at one time. For example, you could create a Feature Circuit that would turn on the spa, spa light, fountain, and fountain light, and patio lights all from one button in the Feature screen (Home screen). Feature Circuits can be setup to control equipment which is not controlled by an AUX circuit such as pumps and lights. Use Feature Circuits to control multiple valve actuators, a dual speed pump (turn on high speed), or a spa spillway effect (in a pool spa combination, all of the pool water can be diverted to the spa then spill back into the pool). To create a Feature Circuit, first assign the Feature Circuit a name, then assign the circuit a function (Circuit Function).

Restore Factory Defaults: Use this feature to overwrite the system configuration with the default factory settings. Follow the screen prompts.

Guest Security Settings: Displays the guest user(s) that have been assigned a passcode and access to system sections (0 to 24). Tap 0 /24 Selections to access the next screen to allow the Guest to access 0 to 24 system settings.

SYSTEM REBOOT (SETTINGS)

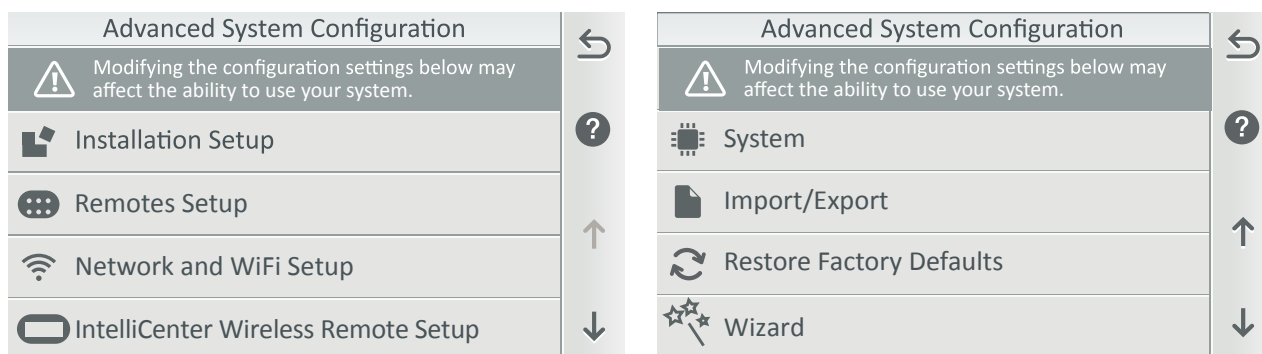

Tap the System Reboot button to reset the system (applies to Outdoor, Indoor Control Panels and Wireless Remotes. Immediately after tapping System Reboot a message screen is displayed to confirm that you wish to reset the system. If you want to stop the system reset, there is a five second delay in which you can cancel the system reset. Tap cancel to stop the system reset.

This feature has the same system reset function using the Reset Button on the Wireless Remote cradle, and on the front of the Indoor or Outdoor Control Panel. See page 77.

ADVANCED SYSTEM CONFIGURATION (SETTINGS)

Notice: The Advanced System Configuration settings may affect the systems pool and spa operations. Before making changes be sure you have the latest system settings backed up to a memory stick, see Settings > Advanced System Configuration > System. See page 125 for details.

Advanced System Configuration Options Summary:

Installation Setup: Configure the IntelliCenter™ Control System system. Body Configuration (page 95). Circuits (page 96), Pumps (page 102), Heaters (page 112), Valves (page 115), Chemistry (page 117).

Remotes Setup: Add Spa-Side Remote: Select Spa Command or iS4 Spa-Side Remote. See page 119.

Network and WiFi Setup: Configure wireless network (SSID, Ethernet). IntelliCenter Wireless Remote Setup: Configure Ethernet, Connect to a Wireless Network (SSID), Test Internet Connection and Reboot WiFi Device. See page 121.

IntelliCenter Wireless Remote Setup: Set up the wireless remote. See page 123.

Delays: Valve delay settings, Heater Cool Down ON/OFF, Freeze cycle time (min), Spa Freeze override (mins) settings. See page 124.

System: System Information, Detected Hardware, Firmware update. See page 125.

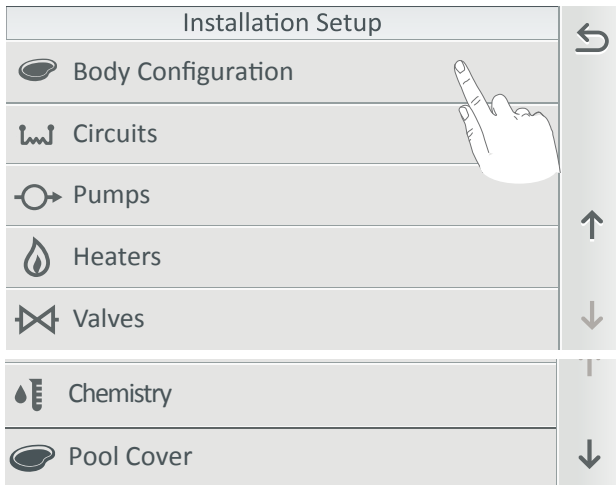

Import / Export: Import System Configuration, Export System Configuration, Export Status Logs, Export Historical Data, Export Debug Data. See page 126.

Restore Factory Defaults: Overwrite the current system configuration with the default factory settings. Follow the screen prompts. See page 128.

Setup Wizard: Configure the system using the step-by-step setup wizard assistant. See page 129.

Installation Setup: From the Installation Setup screen you can setup pool/spa equipment for the each body of water (pool/spa).

Circuits: Setup the system auxiliary circuits (AUX), see page 96.

Pumps: Setup circuits for pumps, see page 102.

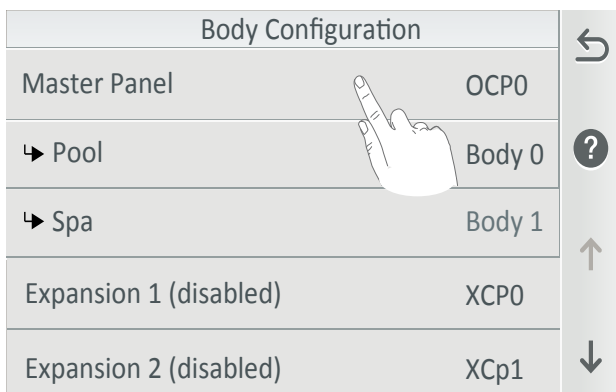

Heaters: Setup circuits for heaters and heat source, see page 112.

Valves: Setup circuits for system valves, see page 115.

Chemistry: Enable IntelliChem® Controller and/or IntelliChlor® SCG, see page 117.

Pool Cover: Setup Pool Cover circuit settings, see page 118.

Body Configuration: Configure the IntelliCenter™ Control System Personality Cards, (Main Panel (OCP0), Expansion enclosures 1, 2, and 3), and the body of water capacity for the pool and spa.

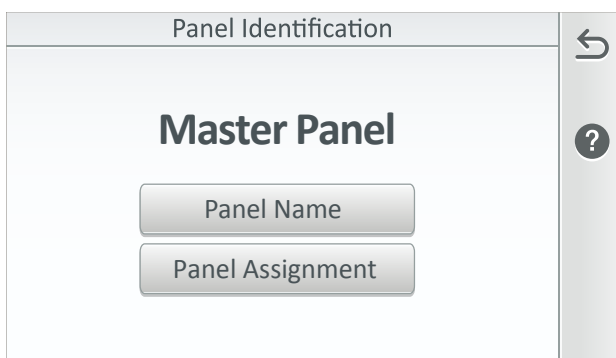

Master Panel (Panel Identification) (OCP 0): Tap Master Panel to display the Panel Identification screen.

Expansion 1, 2, and 3 (see page 97): A maximum number of three expansion enclosures can be connected via RS-485 to the Master Panel (Main Control Board).

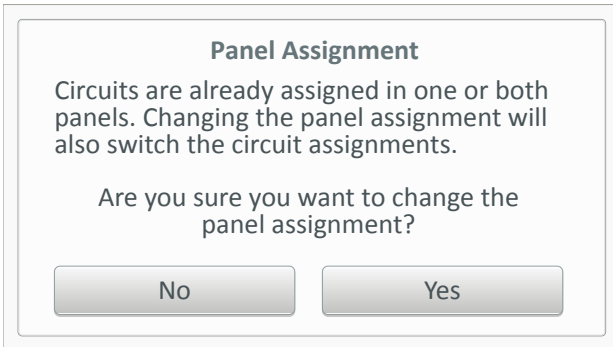

Panel Identification (Master Panel): Panel Name: Tap Panel Name and enter the panel name for the main Master Panel. Tap Check to save.

Panel Assignment: Tap Panel Assignment to reassign circuits to another panel. Tap Check to save.

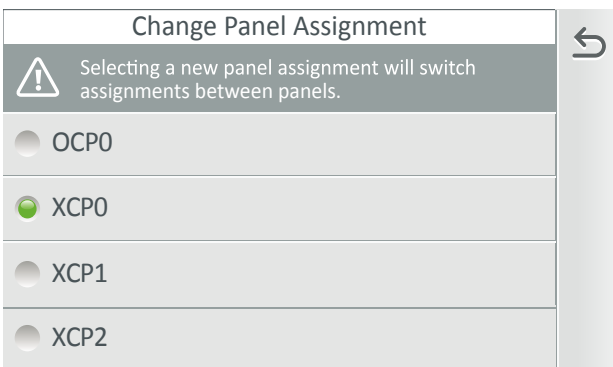

Panel Identification (Master Panel) (Continued)

Panel Assignment: Tap Yes to change the panel assignment.

Show Identifier in Other Panels: Tap to select other installed panel to display in other panel screen. Tap Check to save.

Change Panel Assignment: To change the panel assignment, tap on the panel name. Tap Check to save and return to the previous screen.

Pool (Body 0 Settings): From this screen you can reassign the body type/*, name and capacity.

Body Type: Reassign the body type. Choose either Pool or Spa. Tap Return to return to the previous screen.

Body Name: Enter the body name.

Body capacity: Enter the capacity of the body of water from 1000 - 150,000 gallons (US gallons/liters).

Spa (Body 1 Settings): From this screen you can reassign the body type, name and capacity.

Body Type: Reassign the body type. Choose either Pool or Spa. Tap Return to return to the previous screen.

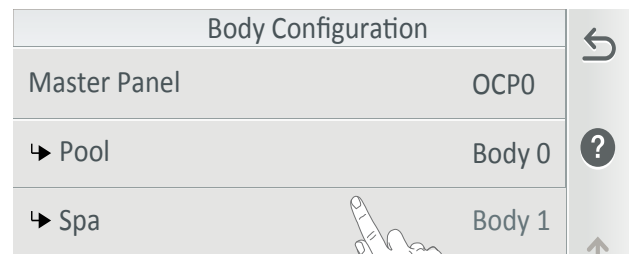

Body Name: Enter the body name.

Body capacity: Enter the capacity of the body of water from 1000 - 40,000 gallons (US gallons/liters).

Pool (Body 0) - For Pool and Spa combination (shared equipment).

Spa (Body 1) - For Pool and Spa combination (shared equipment).

<input type="radio"/> i5x (default)	↶ ?
<input checked="" type="radio"/> i10x (requires i10x kit)	

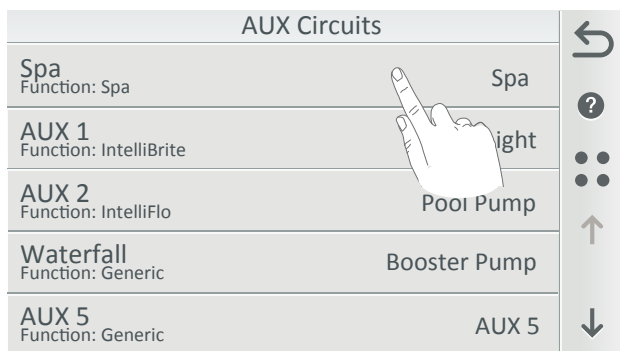

Expansion Panel Daughter card - i10x (10 Relays): This button displays the Daughter Card attached to the main Personality Card (if available) installed in Expansion enclosure number 1. Tap this button to enable an additional Daughter Card connected to the main Personality board (in this example i10x (10 Relays).

Tap the Expansion Panel Daughter Card button to enable the card (Green light on).

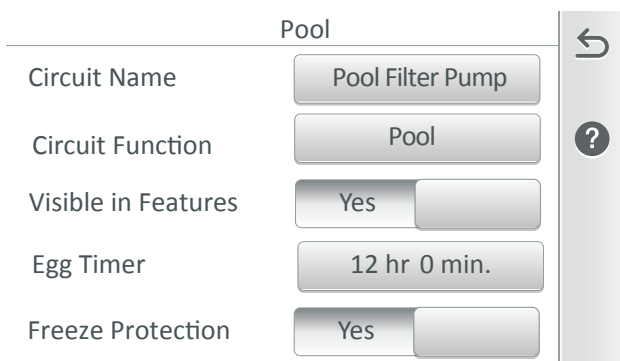

AUX Circuits: Tap AUX Circuits to display the available AUX circuits to assign a function.

AUX Circuits: Tap the AUX Circuit (Function name) to assign a function to the circuit.

Create individual (AUX) Circuits or Group of Circuits (4 Dots Icon): Tap this icon on right side of the screen to create Groups of circuits. Note: For more about Groups (in Settings), see page 90. See page 116 for Feature Settings.

Circuit Name: Select one of the displayed circuit names and tap Check to save. For a complete list of Circuit Names see page 101. To customize a circuit name, tap on the keyboard icon on the right side of the screen and enter the new name.

Circuit Function: Assign the circuit function. For a complete list of Circuit Functions, see page 100.

Visible in Features (Lights and Generic Circuits only): Select ON to display this circuit in the Home, Features screen, see page 50.

Freeze Protection: Assign freeze protection for this circuit. See page 101 for details.

Egg Timer: Tap the Egg Timer button to display the Hours and Minutes button. Tap the Hours and Minutes button to select a manual time-out from 0 to 23 hrs. 59 mins. for the circuit. The Egg Time is a specified time delay (hrs/mins) for the circuit, once it is turned on manually.

Don't Stop: Tap the Hours button until 23 hours is displayed, then tap the button again to display Do Not Stop. The Do Not Stop feature will continuously run the circuit until the it is manually turned off.

Up to 32 individual Feature Circuits can be assigned as Generic circuits or Spillway (Pool/Spa) circuits. A Feature Circuit can be assigned to activate the Spa Spillway effect, where in a pool/spa combination, pool water is diverted to the spa then spilled back into the pool. Feature Circuits can be setup to control equipment which is not controlled by an AUX circuit such as pumps and lights.

Use Feature Circuits to control multiple valve actuators, a Dual Speed pump (turn on high speed), or a spa spillway effect (in a pool spa combination, all of the pool water can be diverted to the spa then spill back into the pool).

Home Screen Features Green Badge: Displays the number of active feature circuits. To display circuits in the Features screen, see Settings > Advanced System Configuration > Installation Setup > Circuits > Feature Circuits > Feature Circuit Settings (Visible in Features (Y/N) option).

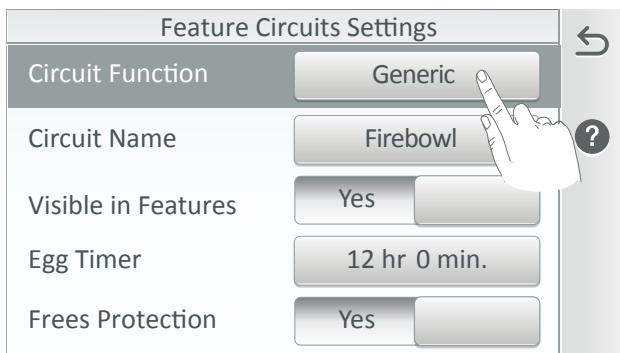

Feature Circuits (Generic or Spillway): From the Home screen, tap Settings > Advanced System Configuration > Installation Setup > Circuits > Feature Circuits. See page 96 and previous page for details.

+ New Feature Circuit (Generic or Spillway):

Tap New Feature Circuit to create a new Feature Circuit (up to 32 total). Select the Feature Circuit Name, from the displayed list or tap the Keyboard icon and enter a custom name.

Circuit Function: Tap Generic and select either **Generic** or **Spillway** for the circuit function. Tap Check to return to the previous screen.

Circuit Name: Displays the assigned circuit name. To change the circuit name, tap the name button.

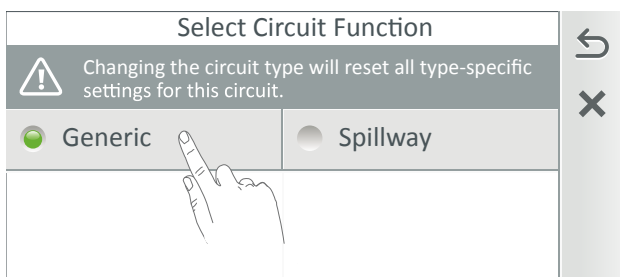

Visible in Features: Select ON or OFF to display the Feature Circuit in the Feature screen (Home screen).

Egg Timer: Set time duration of 0 to 12 hours.

Don't Stop: Tap the Hours Up button until 23 Hours displays, tap once again to display DO NOT STOP. Once the circuit is switched on, it will remain on until it is switched off.

Note: The Egg Timer sets a specified time delay (hrs/mins) for the circuit to function once it is turned on.

Freeze Protection: Assign freeze protection for the circuit. See page 101.

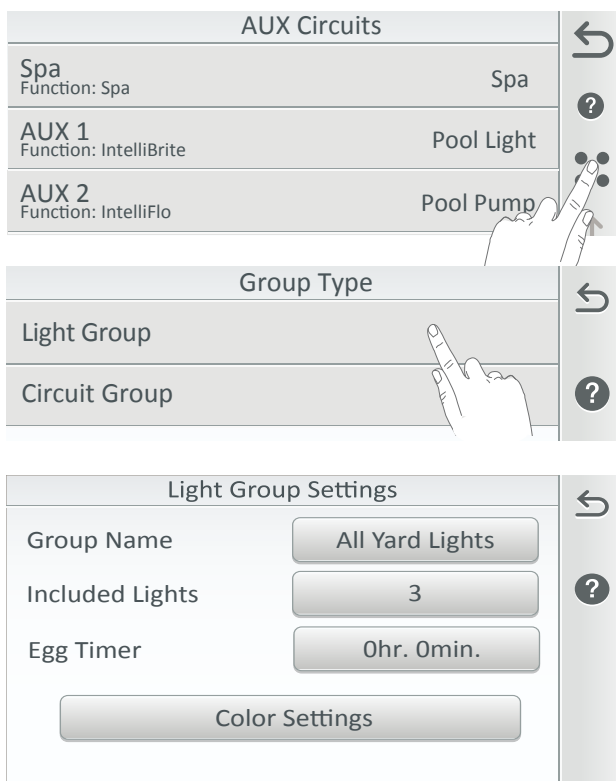

Create A Feature Circuit (Lights/Circuits): From Settings > Advanced System Configuration > Installation Setup > Circuits > Feature Circuits > Add Group (Four Dots Icon) you can create a group of Lights or AUX auxiliary Circuits. These Groups of lights and auxiliary circuits are displayed in the Features > Groups screen. You can also create groups of auxiliary and light circuits in the GROUPS screen (see page 90), which will be displayed in the Features > Groups screen.

From the Feature Circuit screen you can create a group of circuits for Lights or Circuits (see page 56). For example, you could create a Feature Circuit assigned to one button to turn on your spa, spa light, fountain, fountain light, and patio lights.

A Feature Circuit also has the capability to switch a circuit off. You could also create your own custom name, for example, SPA PARTY could be used if there was a spa fountain which should not be on when spa is on (because it could put cold water in the spa) it can be set up in the Feature Circuit to automatically switch off when Spa Party is switched on. A Feature Circuit can also be used to switch off any number of lights with one button. Note: A Feature Circuit may not be assigned to light dimmers although they can turn on light dimming circuits. Note: When setting up Feature Circuits, one Feature Circuit can turn on another Feature Circuit, which might result in the system turning on (or off) a circuit that you don't wish to turn on (or off).

Feature Circuits (Create a Group of Lights or Circuits)

(4 Dots Icon): Tap the 4 Dots icon on right side of the screen to display the Add Group screen. Note: For more about creating groups of circuits, see page Groups on page 90.

Select either the **Light** or **Circuit Group**. Enter a name form the group of lights or circuits.

Select Included Circuits: Tap Included Circuits (or Lights) and select the available AUX circuits and Features Circuits to be assigned to this group of circuits.

Colour Settings (Delays): Adjust the AUX delay time (1-59 seconds) between lights.

Egg Timer: Tap the Egg Timer button to display the Hours and Minutes button. Tap the Hours and Minutes button to select a manual time-out from 0 to 23 hrs. 59 mins. for the circuit. The Egg Time is a specified time delay (hrs/mins) for the circuit, once it is turned on manually.

Don't Stop: Tap the Hours button until 23 hours is displayed, then tap the button again to display Do Not Stop. The Do Not Stop feature will continuously run the circuit until the it is manually turned off.

Feature Circuit: A total of 32 Feature Circuits can be assigned to Circuit and Light circuits. A Feature Circuit is assigned special logic to the circuit. can control equipment that is not controlled by AUX circuits. Typically, AUX circuits are used for high voltage equipment like pumps and lights. Feature Circuits are used for low voltage equipment like valve actuators and pump speeds or pump speeds.

For example, an automatic pool cleaner pump, would assign the circuit function Master Cleaner. With this cleaner logic the cleaner pump would not run without the filter pump being on first, and, the cleaner pump would automatically shut off whenever the spa is switched on. The cleaner will go on after the five minute delay. Also, the automatic cleaner pump will turn off when the spa and/or solar is turned on. Be careful not to duplicate circuit names with these circuits. A Feature Circuit can be assigned to switch a two-speed Filter Pump from high speed to low speed. Note: Individual and group circuit buttons only display on the Home Lights screen.

Valve Actuators and Feature Circuits: Feature Circuits can be assigned to control up to five (5) valve actuators per power centre. To control a total of eight (8) actuators requires the installation of the optional Valve Modules which includes six (6) additional actuators outputs (C, D, E, F, G, H) per panel enclosure. Note: When using solar heat, note that for shared equipment pool and spa combination, valve A is always used for solar. For dual body dual equipment, valve A is always the pool and valve B is always the spa.

Freeze Protection: Freeze Protection ON, switches on all circuits during, if the outdoor air temperature sensor detects the temperature is getting close to freezing (36°F). The system cycles through all circuits that have been assigned freeze protection, and runs the circuits to stop the pipes from freezing. This is especially important if there is a pool and spa combination. If freeze protection is set to both the spa and pool circuits, the filter pump switches on and the pool and spa valves alternate to keep the water moving in both the pool and spa. This process continues until the freeze condition is over. Note: Freeze protection is activated when the air temperature drops to 36°F. If the spa is running a schedule or operated manually, this will override freeze protection. During freeze protection, FREEZE PROTECTION is displayed on the Home screen.

The main pool filter circulation pump is freeze protected as long as FREEZE PROTECTION is set to ON. For all other equipment, Freeze Protect must also be specified on the individual device manager screen. Some devices default to freeze protect.

Heater Operation During Freeze Protection: The heater will not activate during a Freeze Protection period unless it is manually turned on.

CIRCUIT FUNCTIONS

Generic	No special Logic. Simple On/Off control of a circuit with all the programmable capabilities.
Spillway	For pool/spa combinations where the spa is raised above the pool. This setting moves the return valve so that the filter pump pulls the water from the pool and returns it to the spa, creating a water fall effect. Automatic pool cleaners are turned off when this feature is turned on.
Master Cleaner	Works with automatic pool cleaner pumps or cleaner valve actuator. This feature will: <ul style="list-style-type: none">• Force the filter pump on five (5) minutes before the cleaner.• Turn the cleaner off when the spa is on.• Turn the cleaner off for five (5) minutes when the solar heating begins.
Chem Relay	Assign a dedicated relay for the IntelliChem Controller.
Light	Allows special lighting features to work, such as ALL lights on or ALL lights off.
IntelliBrite	Activates the colours of an IntelliBrite LED light.
GloBrite	Activates a GloBrite Colour Light with IntelliBrite 5G LED capabilities.
GloBrite White	Activates a GloBrite White LED light with dimmer capabilities.
MagicStream (IntelliBrite)	Activates a MagicStream laminar water feature with IntelliBrite 5G LED capabilities.
Dimmer	Light with dimmer capabilities. Dimming relay must be installed.
Color Cascade	Activates a ColorCascade water feature with IntelliBrite 5G LED capabilities.
Master Cleaner 2	Works with automatic pool cleaner pumps or cleaner valve actuator. This feature will: <ul style="list-style-type: none">• Force the filter pump on five (5) minutes before the cleaner.• Turn the cleaner off when the spa is on.• Turn the cleaner off for five (5) minutes when the solar heating begins.

PUMPS (SINGLE SPEED, DUAL SPEED, INTELLIFLO® VS, VSF, VF)

Single Speed Pump

+ Add Pump: To add a pump, tap + Add Pump to access the Select New Pump Type screen to setup the pump settings. Pump types are: Single Speed, Dual Speed, IntelliFlo VS, IntelliFlo VSF, and IntelliFlo VF.

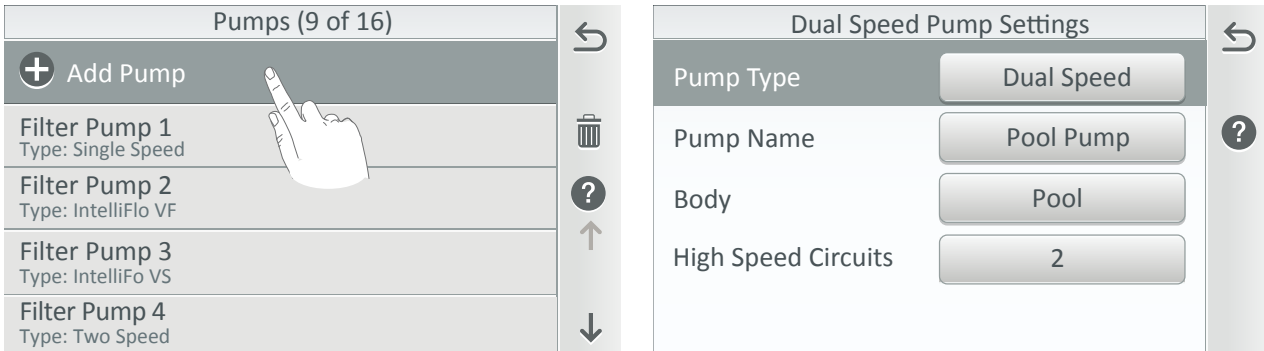

Single Speed Pump Settings: From the Single Speed Pump Settings screen you can change the pump type, name and assign the pump to a body of water (pool, spa, or pool/spa). For information about priming the pump, see page 112.

Operating a Single Speed Filter Pump: To manually turn the filter pump on or off, tap the Pool Filter Pump button on the second Pool screen (on Home screen). If the heater is on and active, and Heater Cool down feature is enabled; when you tap Pool Filter Pump button to turn off the filter, only the heater will turn off and the pool filter pump will automatically turn off after 5 minutes of heater cool down period. You can override the heater cool down period by taping the button again to turn off the filter pump.

PUMPS (DUAL SPEED)

+ Add Pump: To add a Dual Speed pump, tap + Add Pump to access the pump type screen and select Dual Speed.

Dual Speed Pump Settings: Pump Type, Pump Name, Body, and High/Low Speed Circuits. For information about priming the pump, see page 112.

Pump Type: To change the pump type, tap Pump Type button to access the pump type screen. Select the pump for the list. Tap Check to save the new pump type and return to the previous screen.

Pump Name: Tap the Pump Name button and enter the name of the pump. Tap Check to save the name and return to the previous screen.

Body: Assign the pump to a body of water (pool, spa, or pool/spa (shared equipment)).

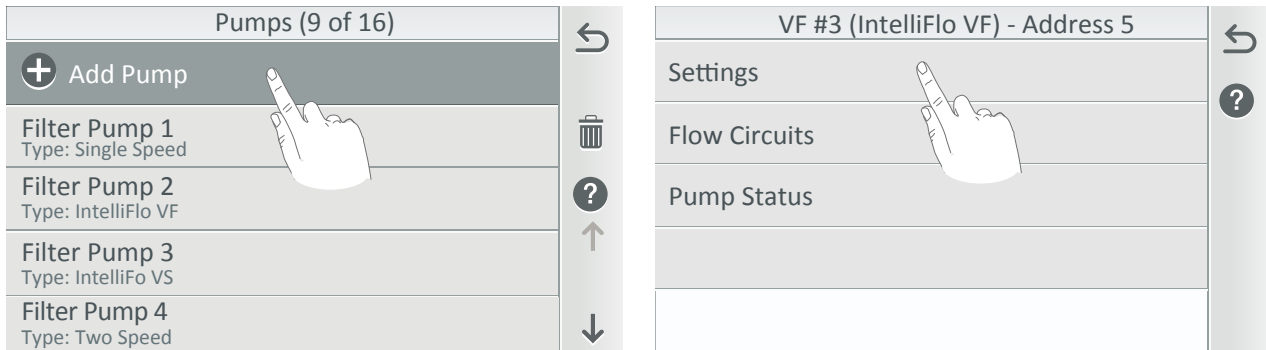

High Speed Circuits: Select a circuit for the high speed. You can choose up to eight (8) high speed circuits. Tap the High Speed Circuits button. Tap Add Circuit and select an AUX circuit to assign the high speed to. Tap Check to save the circuit and return to the previous screen.

Operating a Dual Speed Pump: To manually turn a dual speed filter pump on or off, tap the Pool Filter Pump button on the second Pool screen (on Home screen). When the pump is off, tap the Filter Pump button to turn on the high speed of the filter pump. Tap the button again switch to low speed operation. Note the pump will run the high speed to prime and establish normal water flow if the pump has been off for more than 30 seconds. If the heater is on and active, and Heater Cool down feature is enabled; when you tap Pool Filter Pump button to turn off the filter, only the heater will turn off and the pool filter pump will automatically turn off after 5 minutes of heater cool down period. You can override the heater cool down period by tapping the button again to turn off the filter pump.

PUMPS (INTELLIFLO® VS)

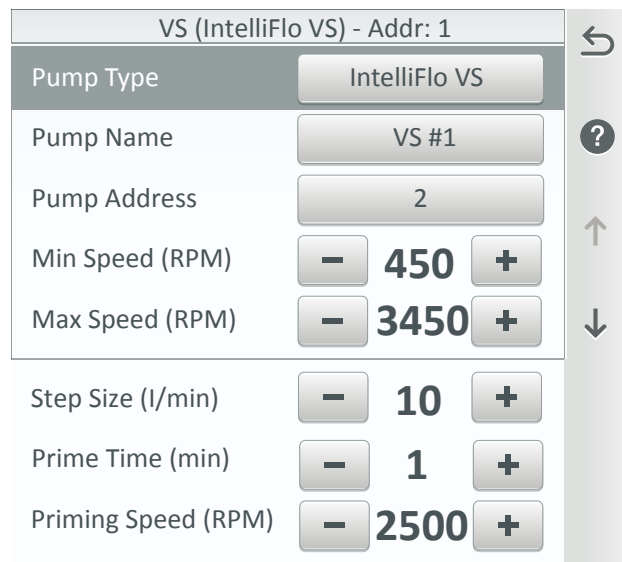

+ Add Pump: To add an IntelliFlo VS pump, tap + Add Pump to access the pump type screen and select IntelliFlo VS.

IntelliFlo VS Settings: Pump Type, Name, Address, Min. Speed (450 RPM), Max. Speed (3450 RPM), Step Size (10-250 RPM), Prime Time (0-5 min.), and Prime Speed (450-3450 RPM). For information about priming the pump, see page 112.

Pump Type: To change the pump type, tap Pump Type button to access the pump type screen. Select the pump for the list. Tap Check to save the new pump type and return to the previous screen.

Pump Name: Tap the Pump Name button and enter the name of the pump. Tap Check to save the name and return to the previous screen.

Pump Address: Assign the pump address from 1-16.

Minimum Speed (RPM): This is the minimum pump speed but still generating sufficient flow in the pool. The system will not run lower than 450 RPM. The lower you can establish this flow rate the better the energy savings. **Note:** Other equipment may require higher pump speed to operate.

Maximum Speed (RPM): This is generally the pump speed required for backwashing the pool filter. The pump will not allow a higher speed of 3450 to prevent damage to the pool system hydraulics.

Step Size: The pump speed step size can be set from 10-250 RPM.

Priming Time (min): The system priming time can be set from 0-5 minutes.

Priming Speed (RPM): The system priming speed can be set from 450-3450 RPM.

PUMPS (INTELLIFLO® VS)

Circuits (1-8)	
Add Circuit	
Pool	1000 RPM
Booster Pump	2500 RPM
WF Pump	1340 RPM

Speed Circuits: Assign the speeds to the circuits you wish to use. Tap Speed Circuits and tap Add Circuits to assign a new AUX circuit. To change the pump speed of a listed circuits, tap the AUX name to change the assigned RPM setting. Tap Return to save the setting and return to the previous screen.

Affiliated Circuit Settings	
Circuit	AUX3
Speed (RPM)	- 1000 +

Affiliated Circuit Settings:

Circuit: The assign circuit to control the pump speed.

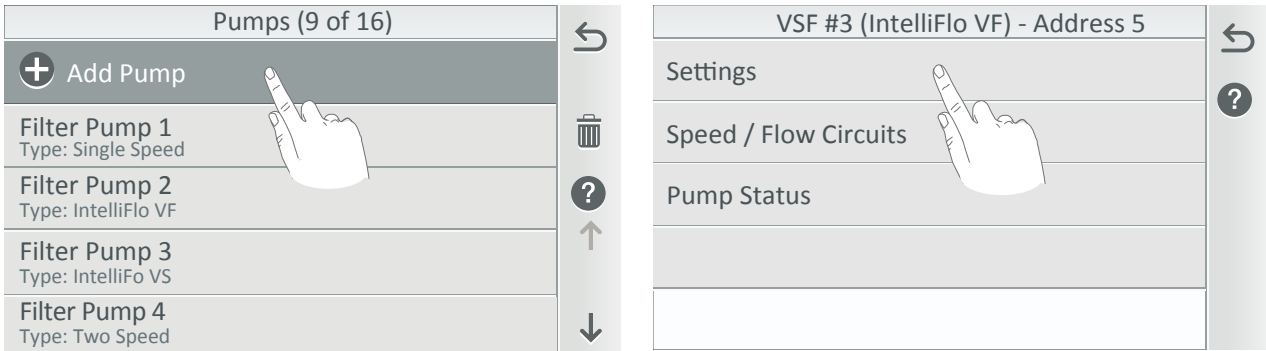

Speed (RPM): Assign pump speed from 450 to 3450 for the selected circuit.

Pump Status	
RPM	Watts
750	100
OK - No Problems Detected Pump appears to be running normally. Click here to view possible issues not being detected.	

Pump Status: Shows the current power usage in Watts, speed, in revolutions per minute (RPM) while the pump is operating. Tap Return to return to the previous screen. Also see: Tap Status on the Home screen to display the current pump status and error condition.

+ Add Pump: To an IntelliFlo VSF pump, tap + Add Pump to access the pump type screen and select IntelliFlo VSF.

IntelliFlo VSF Settings: Pump Type, Name, Address, Min. Speed (450 RPM), Max. Speed (3450 RPM), Min. Flow (GPM 20 GPM), Max. Flow (140 GPM), Step Size (10-250 RPM), and Step Size (1-10 GPM). For information about priming the pump, see page 112.

Pump Type: To change the pump type (function), tap Pump Type button to access the pump type screen. Select the pump for the list. Tap Check to save the new pump type and return to the previous screen.

Pump Name: Tap the Pump Name button and enter the name of the pump. Tap Check to save the name and return to the previous screen.

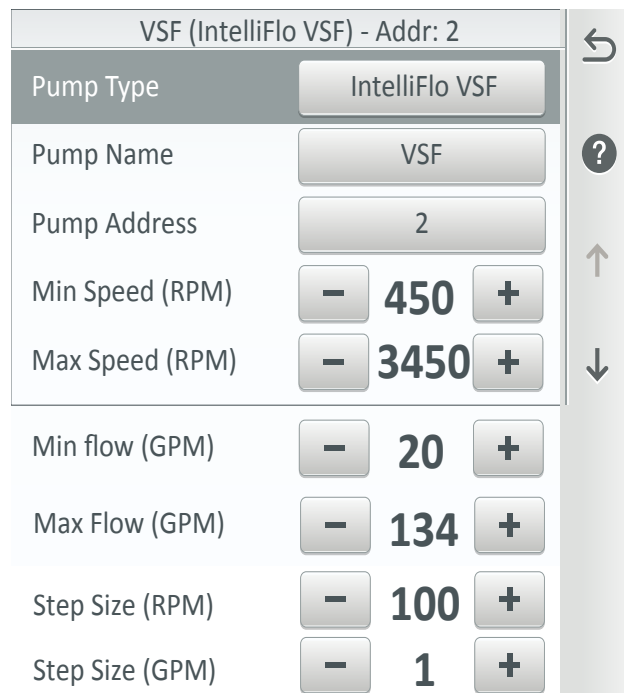

Pump Address: Assign the pump address from 1-16.

Minimum Flow (GPM): This is the minimum flow rate speed but still generating sufficient flow in the pool. The IntelliCenter™ Control System will not run lower than 20 GPM. The lower you can establish this flow rate the better the energy savings.

Maximum Flow (GPM): This is generally the flow rate required for backwashing the pool filter. The pump will not allow a higher flow rate of 140 GPM to prevent damage to the pool system hydraulics.

Step Size (RPM): The pump speed step size can be set from 10-250 RPM.

Step Size (GPM): The pump flow rate step size can be set from 1-10 GPM.

PUMPS (INTELLIFLO® VSF)

Circuits (1-8)	
	Add Circuit
Pool	1000 RPM
Booster Pump	2500 RPM
WF Pump	1340 RPM

Speed Circuits: Assign the speeds to the circuits you wish to use. Tap Speed Circuits and tap Add Circuits to assign a new AUX circuit. To change the pump speed, tap the AUX name to change the assigned RPM setting. Tap Return to save the setting and return to the previous screen.

IntelliFlo® Pump Alarms and Warnings

Alerts and Warnings

The IntelliFlo® Variable Speed and Flow Pump displays all alarms and warnings on the control panel display. When an alarm or warning condition exists, the corresponding light will be lit on the display.

In the event of an alarm: The alarm light will illuminate and all control panel buttons will be disabled until the alarm is cleared. Pressing the Reset button will clear the alarm once the fault condition has been resolved.

In the event of a warning: The warning light will illuminate, but the pump will continue to run. The speed, flow or pressure limit that is causing the warning must be adjusted in order to correct the warning.

Power Out/OFF

The incoming supply voltage is less than required. The drive faults to protect itself from over current. The drive contains capacitors that keep it powered up long enough to save the current run parameters. If power is restored during this process, approximately 20 seconds, the drive will not restart until completed.

Priming the IntelliFlo pump

Note: For more information about troubleshooting, refer to the following manuals: IntelliFlo VF (P/N 350075), IntelliFlo VSF (P/N 356652), and IntelliFlo VS (P/N 354604).

Priming the Pump for the first time or after a service: First release all pressure from filter, pump, and piping system. The pump will prime itself when the suction and discharge valves are opened if the water source is higher than pump. If this is not the case, unscrew and remove pump's lid cover, fill the basket and pump with water. Do not lubricate the lid cover o-ring. The o-ring contains a permanent internal lubricant.

1. Turn the pump lid clamp and lid in a counterclockwise direction until it stops and remove them.
2. Fill the pump strainer pot with water.
3. Once Reinstall the pump clamp and lid onto the strainer pot. The pump is now ready to prime.
4. Make sure all electrical connections are clean and tight.
5. Open the air release valve on the filter, and stand clear of the filter.
6. Switch the IntelliFlo pump on at the power point. Ensure that the green power light is on.
7. Press the Speed 1 button to select the pump speed of 750 RPM.
8. Press the Start button to start the pump. Use the Up/Down button to increase the speed as necessary to prime the pump.
9. When water comes out of the air release valve, close the valve. The system should now be circulating water back to the pool without air bubbles showing in either the hair and lint pot or at the pool return fittings.
10. Use the Up/Down button to adjust the operating speed as desired.

Priming Failure

If the pump is not defined as primed within the “Max Priming Time” it will stop and generate a “Priming Alarm” for 10 minutes, then attempt to prime again. The “Max Priming Time” is set in the pump’s priming menu. If the pump cannot prime within five attempts it will generate a permanent alarm that must be manually reset.

Overheat

If the drive temperature gets above 54.4° C (130° F) the pump will slowly reduce speed until the over temperature condition clears.

Thermal Mode

When active, the motor will run at the preset RPM until the drive internal temperature increases above the minimum. The pump’s internal thermal protection is disabled when connected to an automation system. Thermal protection is provided by selecting Freeze Protection ON in the pump circuit option in the IntelliCenter™ Control System menu. To re-enable the internal thermal protection, the power to the drive must be cycled off then back on.

Over Current

Indicates that the drive is overloaded or the motor has an electrical problem. The drive will restart 20 seconds after the over current condition clears.

Over Voltage

Indicates excessive supply voltage or an external water source is causing the pump and motor to rotate thereby generating an excessive voltage on the drives internal DC buss. The drive will restart 20 seconds after the over voltage condition clears.

Internal Error

Indicates that the self-monitoring motor control software has encountered an error. Clear the alarm and restart the pump. If this alarm persists, contact Pentair Technical Service at **1300-137-344**.

Speed Limit (Warning)

The pump has detected that it has met the maximum allowed speed set in the Min/Max menu. The pump will continue to run, but it will not achieve the desired speed.

Pressure Limit (Warning). The pump has detected that it has met the maximum system pressure set in the Min/Max pump menu (and IntelliCenter menu, see page 104). The pump will continue to run, but it is not achieving the desired flow rate or speed because of the pressure limit. The feature is enabled by default while running a program at a constant flow rate, but must be enabled manually to monitor maximum pressure while running a constant speed program.

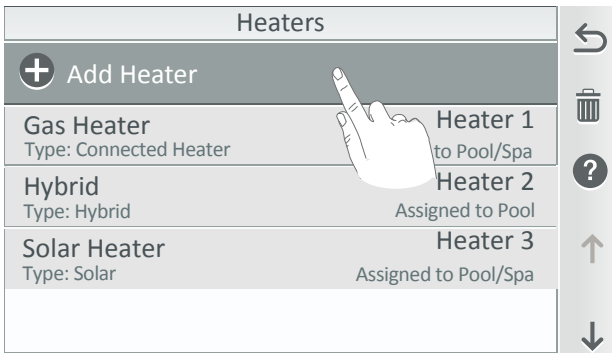

Flow Limit (Warning)

The pump has detected that it has met the maximum flow rate set in the Min/Max menu. The pump will continue to run, but it is not achieving the desired speed because it is running at the maximum flow rate. The Maximum Flow can be set in the Max/Min menu. This feature must be enabled in the Min/Max menu to be active while running a speed program.

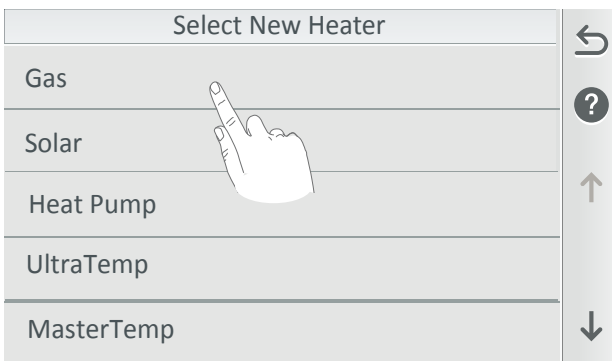

- **Freeze Protection:** When set to ON, the pump motor will run at a user defined speed.
Note: The IntelliFlo pump's internal anti-freeze protection is disabled when connected to the automation control system. To re-enable the IntelliFlo pump's internal freeze protection, the power to the drive must be cycled off then back on.
- **Blocked system:** Detects a blocked suction line. This alarm resets automatically after 30 seconds and the pump restarts.
- **System service soon:** Alerts the operator that the pump discharge pressure has reached the Clean Filter Pressure as setup in the Filter Menu. The filter status will be displayed as 100%. The green warning LED will be on until a backwash cycle is operated. The IntelliFlo pump will automatically reduce speed as necessary to not exceed the Clean Filter Pressure.
Note: The IntelliFlo VS pump alarm and warnings are indicated by flashing LEDs on the pump's control panel. For example, if a "Drive Temperature" warning occurs, the LED will blink two times, then Off, then blink two times. This sequence is repeated until the condition is cleared.
- **Warning condition:** If a warning condition occurs the pump will continue to run but at a reduced speed. The Green LED displays a sequence of blinks to indicate which alarm or warning has occurred.
- **Alarm condition:** If an alarm condition occurs the pump will stop running. The red LED flashes continuously to indicate the presence of an alarm. The alarm LEDs will reset when the condition clears.

HEATERS (GAS) ADD A HEATER

Add Heater: Tap Add Heater to add a new heater type. Up to three heaters can be assigned.

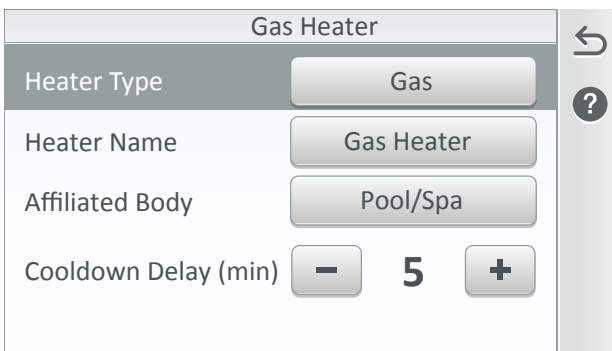

Select New Heater: Select: Gas, Solar, Heat Pump, UltraTemp and Hybrid.

Gas Heater Settings:

Heater Type: Displays the Heater Type selected.

Heater Name: Tap the heater name button to change the heater name. Enter the new name and tap Check to save the name and return to the previous screen.

Affiliated Body (Gas, Solar Heat Pump, UltraTemp and Hybrid): Assign the heater to a body of water: Pool, Spa or Pool/Spa.

Cool Down Delay (min): The gas heater Cool Down Delay (min) can be set from 0 to 10 minutes (5 min. default). Note: Pentair gas heaters do not require a cool down period.

Add Heaters: IntelliCenter™ Control System supports the following heater configurations: Gas Heater, Solar Heater, Heat Pump, UltraTemp, Hybrid, Gas Heater + Solar Heater (Solar Preferred), Gas Heater + Heat Pump (Solar Preferred), Gas Heater + UltraTemp/Hybrid (UltraTemp/Hybrid Preferred).

Heaters (Off)

Pool/Spa System without a Heat Source: If the pool/spa system does not have a heat source installed, the Home screen and Pool and Spa screens will not display the Heating Set Point buttons. The Pool/Spa badge (Yellow, Blue, Green) displays the current water temperature.

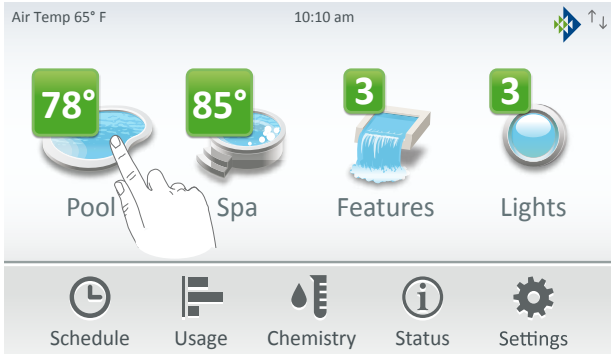

SOLAR:

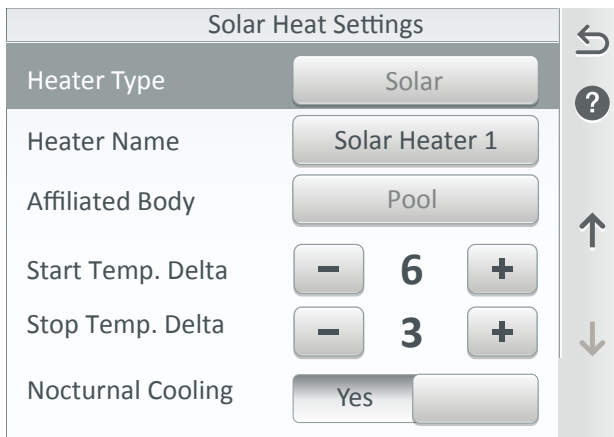

Nocturnal Heater Cool Down Delay

For Solar and Heat Pumps: Use the Cooling Set Point temperature control buttons displayed on the Pool and/or Spa screen to adjust the nighttime temperature of the pool/spa water.

See page 115.

Heaters (Solar Heating)

Solar Heater Settings:

Heater Type: Displays the Heater Type selected.

Heater Name: Tap the heater name button to change the heater name. Enter the new name and tap Check to save the name and return to the previous screen.

Affiliated Body: Assign the heater to a body of water: Pool, Spa or Pool/Spa.

Start Temp. Delta: The minimum temperature difference to start heating. The temperature range is adjustable from 3° - 9°. Factory default is 6.

Stop Temp. Delta: The temperature difference at which heating will stop. The temperature range is adjustable from 2° - 5°. Factory default is 3.

Solar Nocturnal Cooling ON/OFF:

ON: Provides automatic nocturnal (nighttime) cooling during night time hours for pools that overheat in hot climates. When enabled, circulates pool water to the collector panels when the solar sensor temperature and the pool temperature is hotter than the high limit setting. This process cools the pool water over time. Circulation will stop when the solar sensor temperature is 3 degrees (default) less than the pool temperature or the pool temperature is cooler than the high limit setting.

OFF: SOLAR nocturnal (nighttime) cooling disabled. Note: Valves A & B and Solar Heating: For Single Body systems, Valve A is used for SOLAR if you choose the Solar Heater. For Dual Body systems, Valve B is used for SOLAR if you choose the Solar Heater.

Heaters (Solar Heating):

Solar Heating: Sta Effective solar heat depends on the solar and water temperature and the start and stop differentials, When solar is available, then the system will rotate the 3-Way Valve and turn on the solar booster pump if applicable or increase the RPM's if an IntelliFlo® Pump is present. This allows the water to flow to the solar collectors. If a pressure cleaner pump is installed, the cleaner pump will turn off for 10 minutes every time solar turns ON. The solar roof sensor must be 6° higher (based on Start/Stop Temp. Delta) than the water temperature. The pump must be ON for a few minutes for operation. When the roof sensor and the water temperature are within 3° of each other (based on Start/Stop Temp. Delta), solar heat will switch off. The solar temperature start and stop differential settings are factory at 6° and 3°. These differential settings are adjustable. Refer to your solar service professional for the optimum setting. Changing the differentials could result in the system not working properly.

Heating: Heating will start when the Start differential condition is met and the water temperature is below the target temp. When these conditions are satisfied heating is turned ON. Example: Water Temperature is 75°F; The target temperature is 82°F. When the roof solar collectors temperature exceeds the water temperature by 6° Start Temp Delta (81°F), the solar valve rotates. If a solar booster pump is required, this pump will turn on.

Heaters (Heat Pump)

Heat Pump	
Heater Type	Heat Pump
Heater Name	Heat Pump
Affiliated Body	Pool/Spa

Heat Pump Settings:

Heater Type: Displays the Heater Type selected.

Heater Name: Tap the heater name button to change the heater name. Enter the new name and tap Check to save the name and return to the previous screen.

Affiliated Body: Assign the heater to a body of water: Pool, Spa or Pool/Spa.

Heaters (Heat Pump & UltraTemp)

PARAMETER NAME	DESCRIPTION
Temperature Differential	Set how much the water temperature needs to drop below the set temperature, for the heat pump to start up again. E.g. If the set temperature and water temperature is at 82°F [28°C], the heat pump will stop heating and not restart until the water temperature drops to 76°F [24°C] if the Temperature Differential is set to 6°.
Heat Mode Temp	This is the set temperature when in Heat mode.
Cool Mode Temp	This is the set temperature when in Cool mode.

Valve Actuators Circuit Assignments: The IntelliCenter™ Control System can control up to four automatic valve actuators (for shared equipment). Six (6) more can be added with Valve Expansion Cards. Two of the valve outputs are dedicated to the pool/spa intake (INTAKE) and return (RETURN) valves. Valve A or Valve B actuators are for general purpose use (solar, water-feature, in-floor cleaner, etc.). Note: Valve A may not be used with any other circuit when Solar is selected as a heat source. Note: When using solar heat, note that for shared equipment pool and spa combination, Valve A is always used for solar. For dual body dual equipment, Valve A is for pool, and Valve B for spa. Installing the optional Valve Expansion Card provide an additional six (6) valve actuators (C, D, E, F G). See IntelliCenter Control System Models in Settings > Advanced System Configuration > Installation Setup > Body Configuration, see page 97.

Also see Valve Delays: For Valve delay and Heater Cool Down settings and Freeze Cycle Time, **see Settings > Advanced System Configuration > Delays on page 124.**

For Pool and Spa Shared Equipment: Return valve actuator (pool), Spa Return. Intake Valve Actuator (Pool Drain/Skimmer, Vacuum Line, Spa Drain/Skimmer).

Valves	
Valve A	Standard
Valve B	Standard
Intake	Standard
Return	Standard
Valve A (XPC0)	Standard

<input type="radio"/> Spa	<input type="radio"/> AUX 1
<input type="radio"/> AUX 2	<input type="radio"/> AUX 3
<input type="radio"/> AUX 4	<input checked="" type="radio"/> Filter Pump
<input type="radio"/> AUX 5	<input type="radio"/> AUX 6

Note: **Valves A & B and Solar Heating:** For Single Body systems, Valve A is used for SOLAR if you choose SOLAR heating. For Dual Body systems, Valve B is used for SOLAR if you choose SOLAR HEATER.

VALVE A Settings: Standard (2-Way/3-Way). Note: For Single Body systems, Valve A is used for SOLAR if you choose SOLAR HEATER. Valve A is displayed if additional valve circuits are available (Depending on the Personality Card installed).

Valve Name: Tap Valve A name to change the valve name.

Assigned Circuit: Assign the Pool circuit for VALVE A.

VALVE B Settings: Standard (2-Way/3-Way). Note: For Single Body systems, Valve B is used for SOLAR if you choose SOLAR HEATER. Valve B (1) is displayed if additional valve circuits are available (Depending on the Personality Card installed).

Valve Name: Tap Valve B name to change the valve name.

Assign Circuit: Assign the Spa circuit for VALVE B.

Valves: Intake and Return

Intake Settings	
Valve Type	Standard
Valve Name	Intake
Assigned Circuit	Rotates on Pool/Spa

Intake Settings:

Valve Type: Standard (2-Way/3-Way).

Valve Name: Intake (predefined function/name) cannot be changed.

Assigned Circuit: Assign to the intake line valve that rotates between the pool and spa to circulate water.

Return Settings	
Valve Type	Standard
Valve Name	Return
Assigned Circuit	Rotates on Pool/Spa

Return Settings:

Valve Type: Standard (2-Way/3-Way).

Valve Name: Return (predefined function/name) cannot be changed.

Assigned Circuit: Assign to the return line valve that rotates between the pool and spa to circulate water.

Optional Expansion Valve A(XPC0) / Valve B (XPC0)

Valves	
Valve A	Standard
Valve B	Standard
Intake	Standard
Return	Standard
Valve A (XPC0)	Standard

Additional Valve Circuits: Optional Personality Card can provide additional valve circuits that will be displayed on the Valve screen as Valve A (XPC0) and Valve B (XPC0) depending on the system model for more about IntelliCenter™ Control System models.

Configuring Valve Actuators (Controlled by AUX or Feature Circuit)

The IntelliCenter™ Control System can control two auxiliary valve actuators (A and B) for applications such as solar heating and water features. With the addition of the Valve Expansion Card, the system can accommodate up to six (6) additional actuators (C, D, E, F, G, H) for a total of eight (8) actuators.

Before configuring auxiliary valve actuators, first assign names to the AUX or FEATURE circuits. Auxiliary valve actuators can be controlled by any AUX circuit or Feature circuit. By using FEATURE circuits to control valve actuators, you can conserve your AUX circuits for high voltage relays for controlling pumps and lights. You can also use a FEATURE CIRCUITS to couple valve actuators with AUX circuits for specific applications.

CHEMISTRY [INTELLICHLOR® SCG & INTELLICHEM® INSTALLATION]

From the Chemistry screen you can configure one IntelliChlor SCGs and one IntelliChem Controller. Also see: Home screen(*): Tap Chemistry to access IntelliChlor and IntelliChem operation summary screens, page 50.

Add IntelliChlor and/or IntelliChem: Tap Chemistry on the Home screen. Tap Add Chemistry. Select one IntelliChlor SCG and address up to four (4) IntelliChem Controllers on the Select Chemistry Device screen.

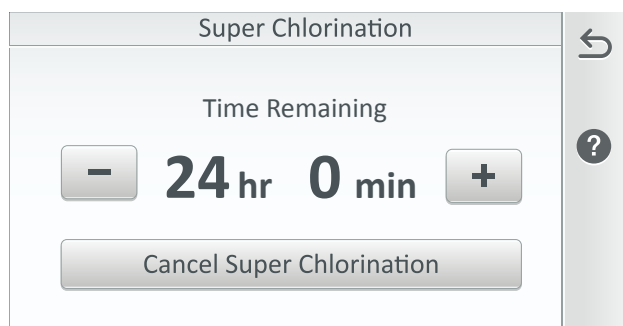

IntelliChlor SCG Settings: For dual body systems, each device is assigned to pool/spa. For single body systems, select either Body 1 (pool), Body 2 (Spa).

Chlorination Output Levels: Set the Pool and Spa chlorine output levels. The system can only generate chlorine while the filter pump is operating. Set the percentage to produce chlorine. The Spa outputs 1/20 of the pool output when the Spa mode is switched on. Note: If using the Filter Pump Relay select Filter Pump Relay and Tap Next. Choose either the Pool or Spa Relay and can set the chlorination output levels and turn Super Chlorination On/ Off. Tap the Back arrow to return to the previous screen and Tap Next.

Super Chlorination (1 to 96 hrs.)(ON): Tap the Start Super Chlorination button to temporarily override the current chlorination output levels with super chlorination (100% output for the selected time, typically 24 hours).

IntelliChem Settings: Address (1-4): Select an address from 1-4 for the IntelliChem Controller.

Body Assignment: For dual body systems, the device is assigned to pool/spa. For single body systems, select either Body 1 (pool), Body 2 (Spa).

(*) Show/Hide IntelliChem Badge on Home Screen: Go to Settings > General > Chemistry Readings Badge to show pH and ORP readings (set to ON or OFF).

INSTALLATION (POOL & SPA COVER)

From the Installation Setup screen, Tap Pool and Spa Cover to display the Pool and Spa Cover Select screen. The system supports two pool or spa covers (Pool/Spa Cover 1 or Pool/Spa Cover 2) one cover for each body of water. From the Pool/Spa Cover settings you select which circuits to switch OFF and ON when the pool or spa cover is closed or open.

Pool or Spa Cover Position: "OPEN" and "COVERED" is displayed on the Home screen to indicate the current position of the cover. The cover connection is via an RS-485 COM Port on the IntelliCenter™ Control System Expansion Card.

Pool Cover 1 Settings	
Cover Enabled	<input type="checkbox"/> Disabled
Cover State Normally	<input type="checkbox"/> Open
Affected Circuits	<input type="button" value="Configure..."/>
IntelliChlor Active	<input type="checkbox"/> OFF
IntelliChlor Output	<input type="button" value="-"/> 20 <input type="button" value="+"/>

Pool Cover Settings:

Cover Enabled: Select either Enabled or Disabled.

Cover State Normally: Select either Closed or Open for the state that the pool or spa cover is usually in.

Affected Circuits: Select the circuits that you want to switch OFF/ON when the pool or spa cover is closed or open. Tap Check to save and return to the Settings screen.

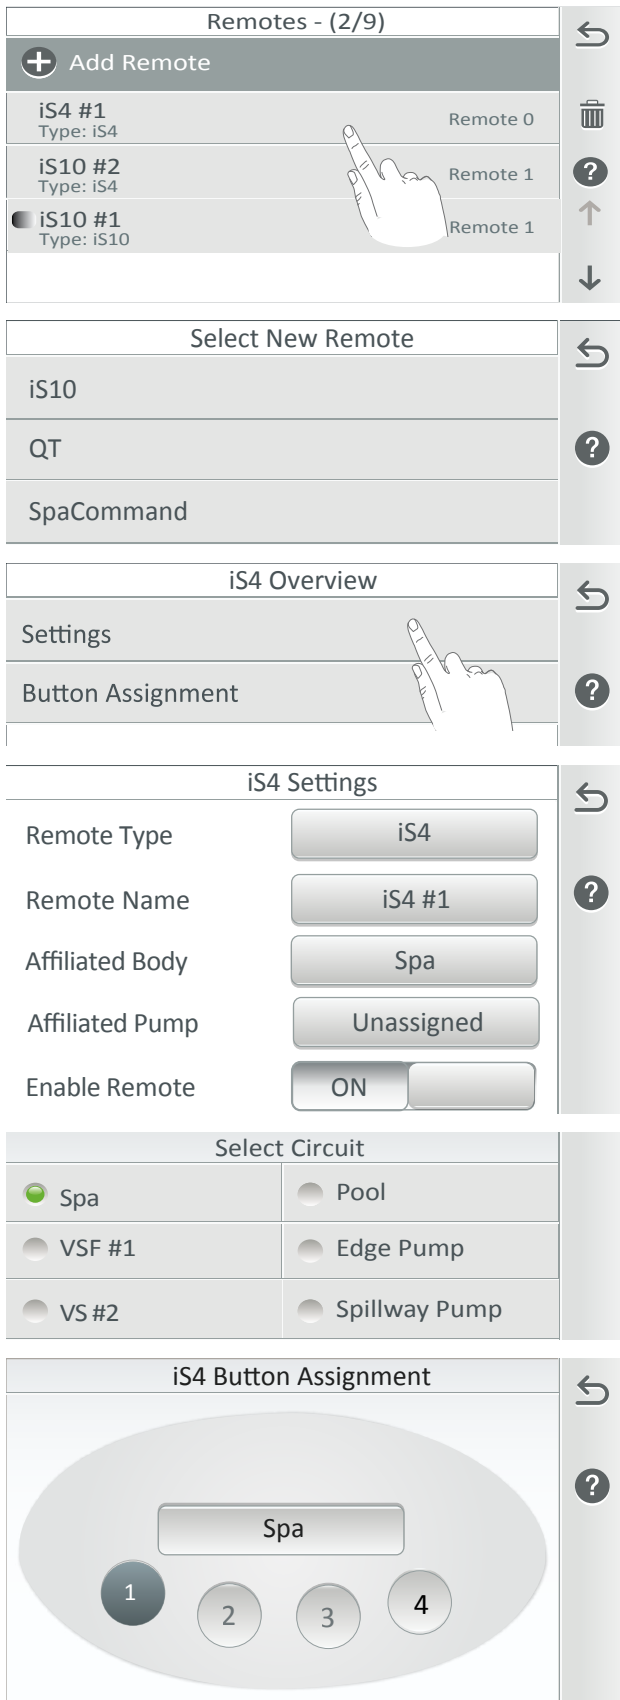

IntelliChlor Active (0-40): Select ON to switch the IntelliChlor SCG circuit OFF when the pool or spa cover is closed.

IntelliChlor Output: While the pool or spa cover is closed, select the IntelliChlor SCG chlorine output from 0 to 50 %.

Select Pool Cover	
Cover 1	<input type="checkbox"/>
Cover 2	<input type="checkbox"/>

iS4 Spa-Side Remote: To configure an iS4 remote, tap + Add Remote and choose iS4 from the Select New Remote screen.

iS4 Settings: From the iS4 Overview screen. Tap Settings to display iS4 setting options.

Remote Type: The Remote Type is assigned as iS4.

Remote Name: To change the name, tap the Remote Name button. Enter the new name and tap Check to save.

Affiliated Body: Tap the Affiliated Body of water button. Select Spa (or Pool). Tap Return to save.

Affiliated Pump: Tap the Affiliated Pump circuit button (Select Pump (iS4 screen). Select the pump circuit that is assigned to the iS4 remote. Tap Check to save. See Pump on page 104 to assign pump circuits.

Enable Remote: Tap the Enable Remote ON/OFF button to turn the remote ON or OFF.

Button Assignments (1-4): Tap Button 1, then tap the Unassigned button and choose a circuit function for the selected button. Repeat this step for buttons 2-4. The available AUX circuits displayed are assigned in the Circuits option screen, see page 98 (AUX Circuits and Feature Circuits, see, Settings > Advanced System Configuration > Installation Setup > Circuits).

Delete Remote: From Remotes screen tap the Trash Can icon, select the remotes to delete and tap Check. Tap Yes to delete the selected remotes.

Note: The iS4 remote (P/N 521885) requires a wired RS-485 connection to a COM port on main circuit board in the power centre.

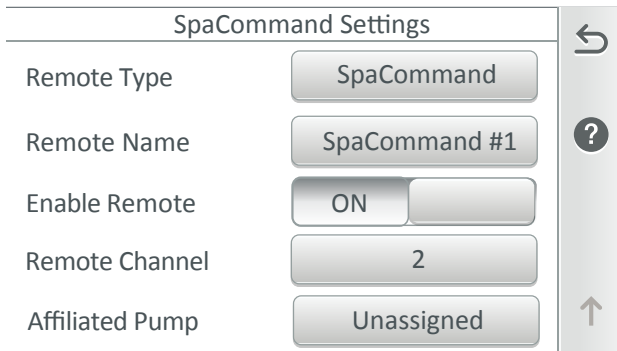

SPACOMMAND REMOTE [ADVANCED SYSTEM CONFIGURATION]

SpaCommand Spa-Side Remote: To configure a SpaCommand remote, tap + Add Remote and choose SpaCommand from the Select New Remote screen.

SpaCommand Settings: From the SpaCommand Overview screen. Tap Settings to display SpaCommand setting options.

Remote Type: The Remote Type is assigned as SpaCommand.

Remote Name: To change the name, tap the Remote Name button. Enter the new name and tap Check to save.

Enable Remote: Tap the Enable Remote ON/OFF button to turn the remote ON or OFF.

Remote Channel: Tap the Remote Channel number and select a channel form 1-4. Tap this button to assign a communication address (1, 2, 3 or 4). The assigned channel is used to communicate to multiple SpaCommand to mirror each other or to operate individually with different functions.

Affiliated Pump: Tap the Affiliated Pump circuit button. Select the pump circuit that is assigned to the SpaCommand remote. Tap Check to save.

Body: The remote is assigned to Spa. To reassign to a different body of water go to Advanced System Configuration > Installation Setup > Body Configuration, see page 110.

Note: The SpaCommand remote requires a wired RS-485 connection to a COM port on main circuit board in the power centre.

Delete Remote: From Remotes screen tap the Trash Can icon, select the remotes to delete and tap Check. Tap Yes to delete the selected remotes. Note: The SpaCommand remote requires a wired RS-485 connection to a COM port on main circuit board in the power centre.

Button Assignments (1-10): Tap Button 1, then tap the Unassigned button and choose a circuit function for the selected button. Repeat this step for buttons 2-10. The available AUX circuits displayed are assigned in the Circuits option screen, (AUX Circuits and Feature Circuits, see, Settings > Advanced System Configuration > Installation Setup > Circuits).

Address Mode ON/OFF: Tap this button enable or disable the assigned Remote Channel (1-4).

NETWORK & WIFI SETUP [ADVANCED SYSTEM CONFIGURATION]

From the Network and WiFi Setup screen you can set up Ethernet settings using DHCP (default on) or a static IP Address to connect to your network. The IntelliCenter™ Control System Client Bridge Wireless Antenna provides a wireless connection to your home wireless router using an Ethernet (LAN Cat5) cable connected to the main circuit board on the Outdoor Control Panel. Note: See page 89 for Pentair User Portal > Enable Web & Mobile Interface (ON) to enable the PC Web App and Mobile Interfaces to allow local network and Internet communications.

Connect Ethernet: Displays the current IP Address.

Connect Wireless Network: Discover nearby wireless networks. Important: No spaces can be in the SSID network name. IntelliCenter will not be able to join an SSID network that has a space in its name.

Adjust Wireless Transmit Power: Auto

(Default). Choose the wireless transmit power from 1 to 26 dBm). Use a higher dBm value to transmit the wireless signal over a longer distance. Tap the Checkmark. Once the antenna has rebooted it will transmit using increased the power.

Internet Connection Test: Test the Internet connection after the wireless home wireless connection has been setup. If connected to the Internet, the average response time is displayed.

Configure Ethernet Settings (DHCP or static IP Address).

Use DHCP (ON Default): The IP address is obtained automatically and is displayed.

OFF: IP address is entered by the user.

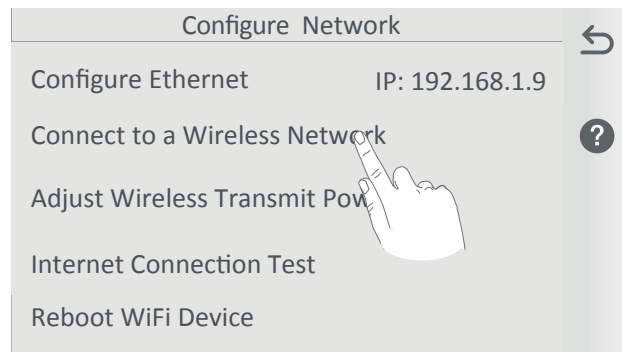

IP address: Your IntelliCenter IP Address (example; 192.168.1.9),

Subnet Mask: 255.255.255.0

Default Gateway: The Default Gateway is obtained automatically (DHCP) or entered by the user (Static).

Primary DNS: Populated (DNS). Server should be provided by your ISP.

Secondary DNS: Populated (DNS). Only one DNS server should be configured as primary for a zone, but you can have any number of secondary servers for redundancy. Both primary and secondary servers for a zone serve exactly the same data to clients. Because of this you could easily simulate a secondary server on a single computer with two IP addresses.

NETWORK & WIFI SETUP [ADVANCED SYSTEM CONFIGURATION]

Configure Network	
Configure Ethernet	IP: 192.168.1.9
Connect to a Wireless Network	
Adjust Wireless Transmit Power	
Internet Connection Test	
Reboot WiFi Device	

Connect Wireless Network: Tap the Configure Wireless Network button to display the available wireless within range of the IntelliCenter™ Control System wireless antenna.

Available Networks	
SISUKWifi WPA2-PSK	
NYSAWifi WPA2-PSK	
NTSAUKWifi WPA2-PSK	
StarBucks WPA2 Personal	
WifiMacD WPA2-PSK	

Available Networks: Displays the available wireless networks within range of the IntelliCenter Control System wireless antenna. To connect to a wireless network, tap the name of the wireless network, the keyboard is displayed to enter a password or leave it blank. The previous screen displays the System IP.

Remote Access Connection Instructions

1. Tap **Connect to a Wireless Network** and wait for your home network name (SSID) to be displayed. This can take up to a minute or more to complete.
2. Select your home network and enter the password. Important: No spaces can be in the SSID network name. IntelliCenter will not be able to join an SSID network that has a space in its name.
3. Once the antenna has rebooted, from the Configure Network, tap **Internet Connection Test** to verify the Internet connection.
4. When the Internet connection test passes, press and hold the Return arrow to return to the Home screen.
5. From the Home screen, tap **Settings > Pentair User Portal**. See page 89.
6. Tap **Enable Web & Mobile Interface**.

WiFi Antenna Location

Check the Signal at the Equipment Pad: Use a mobile device or laptop to check your home network signal is available in the location of the equipment pad. If your home network name (SSID) displays in the list with a good signal strength, then mount the antenna at that location. If the signal strength is low, find an area that has a stronger signal, or install a WiFi Range Extender.

Installing a WiFi Range Extender: If the signal strength from the home network is too low due to the long distance to the IntelliCenter WiFi antenna, install a WiFi Range Extender and verify the connection to the home network SSID. Once the antenna with extender is installed in the optimum location, you are ready to configure the IntelliCenter Control System for remote access.

INTELLICENTER™ WIRELESS REMOTE SETUP [ADVANCED SYSTEM CONFIGURATION]

The IntelliCenter™ Control System Wireless Remote requires optional Kit P/N 522036. This kit includes a Wireless Transceiver with antenna which connects to an RS-485 COM port on the Outdoor Control Panel circuit board located in the power centre. **Note:** IntelliCenter Control System settings made on the Outdoor and Indoor Control Panels and the Wireless Remote are synchronized to have the same system settings on each control panel.

See Wireless Connections Diagram on page 142.

IntelliCenter Wireless Remote Setup		Select Wireless Channel	
Address	<input type="text" value="12"/>	<input checked="" type="radio"/> 12	<input type="radio"/> 13
Panel #	<input type="text" value="1"/>	<input type="radio"/> 14	<input type="radio"/> 15
<input type="button" value="Update FW"/>		<input type="radio"/> 16	<input type="radio"/> 17
FW Update Mode: Off		<input type="radio"/> 18	<input type="radio"/> 19
FW Update State: N/A		<input type="radio"/> 20	<input type="radio"/> 21
FW Updata Status: N/A			
Radio Firmware Version: 0.00			

Address: Display the current wireless channel being used. **For most operations address 15 is the default address.** If you should need to change the address, tap the Address button to access the Select Wireless Channel screen and select a different channel from 12 through 25. The unique wireless address communicates to the wireless transceiver located at the IntelliCenter Control System power centre.

Panel #: Tap this button to select which Wireless Panel to transmit from. Select either Wireless Panel #1 or Wireless Panel #2.

Update FW: Tap Update FW to update the firmware. Abort FW Update to abort the update.

Radio Firmware Mode: Displays the current firmware version of the wireless remote.

Note: The Wireless Remote signal strength and battery icon are displayed on the Home screen.

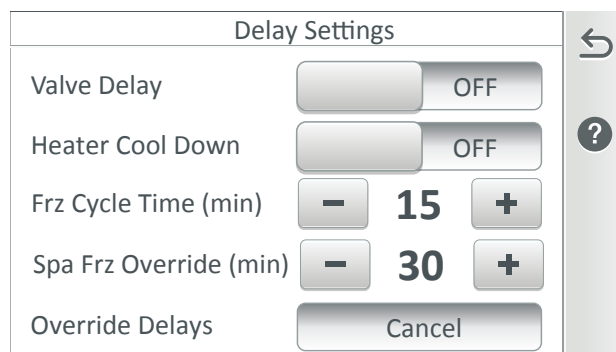

DELAYS [ADVANCED SYSTEM CONFIGURATION]

Delay Settings

Valve Delay ON or OFF (Pool/Spa):

ON: Pool/Spa pump is off (1 minute) during the delay for pool/spa valve rotation.

OFF: No valve delay for Pool/Spa rotation.

Heater Cool Down Delay ON or OFF (Cancel Delay): Some heaters require a cool-down cycle before being turned off. This can be accomplished with a setup procedure in the IntelliCenter™ Control System which runs the filter pump an additional five (5) minutes to dissipate residual heat built up inside the heater combustion chamber. The delay feature is mainly for use by service technicians to shut the filter pump off immediately, and know the heater has not been running. **IMPORTANT: Heaters manufactured by Pentair Water Pool and Spa do not require this cool-down period and do not need the delay to be set up.**

ON: Activate the pump during a heater cool down.

Pump on during heater cool-down: Select this option if you have a heater or other equipment that requires that the filter pump stay on for ten minutes after the equipment goes off.

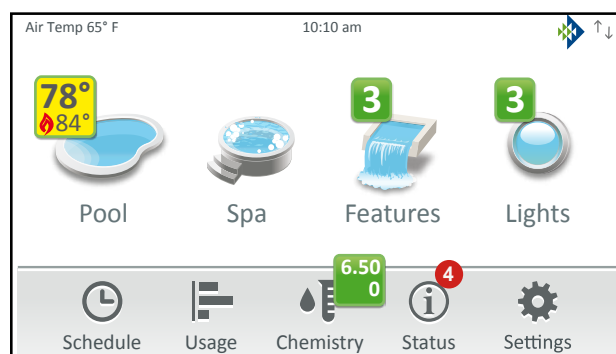

OFF: Heater cool down delay cancel: Shuts OFF the filter pump immediately.

Freeze Cycle Time (min): Set the freeze protection time from 5 to 60 minutes to run the pump during freezing temperatures. Default time is 5 minutes.

Spa Freeze Override Time (min): Set the Spa pump freeze override time from 0 to 240 (mins. - 4 hours). This feature overrides the spa pump circuit that has freeze protection active. This allows you run the pump and heat the spa during freezing temperatures. For more information about using the spa during freeze conditions, see page 54.

Override Delays: Tap this button to override (cancel) any system delays currently in progress. A Yellow badge displayed on the Home screen indicates a Valve delay is in progress.

Delay Badge (Yellow): A Yellow badge displayed on the Home screen Pool/Spa icon indicates a Valve rotation (delay) is in progress.

SYSTEM [ADVANCED SYSTEM CONFIGURATION]

System: Displays the system firmware version: Version 1.010. Tap System Information to display MAC Address, Serial Number, Manufacturer Date, Firmware Version, IP Address and Release Notes. Release Note: Information about the current system firmware release.

Use this option to update the current firmware to a newer or earlier version.	
<input type="button" value="Check for Update"/>	
<input type="button" value="Update from USB"/>	
<input type="button" value="Update from Panel"/>	

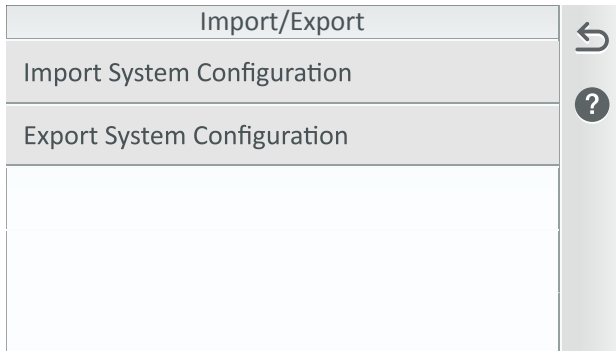

Check for Update: Tap this button to check for the latest IntelliCenter™ Control System firmware version. Follow the screen prompts.

Update from USB: Tap this button to display the **Select Firmware File for Update** screen. Using the Up/Down arrows, locate the Update file (.pfw). Tap the file name to begin the update.

Update from Panel: Tap this button to update the update the current firmware to a newer or earlier version from a USB device installed in the Outdoor Control Panel, Indoor Control Panel, Wireless Remote. Follow the screen prompts.

IMPORT / EXPORT [ADVANCED SYSTEM CONFIGURATION]

Import Export System Setup Configuration: Use this feature to import or export a system configuration.

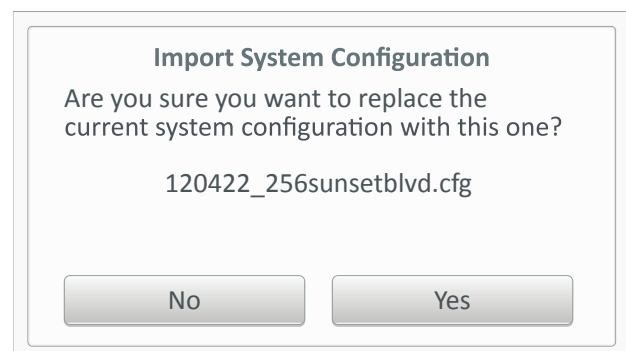

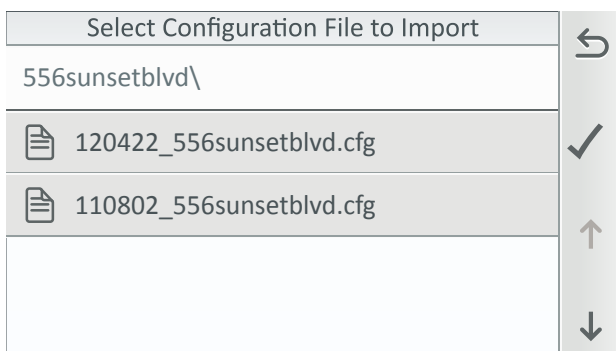

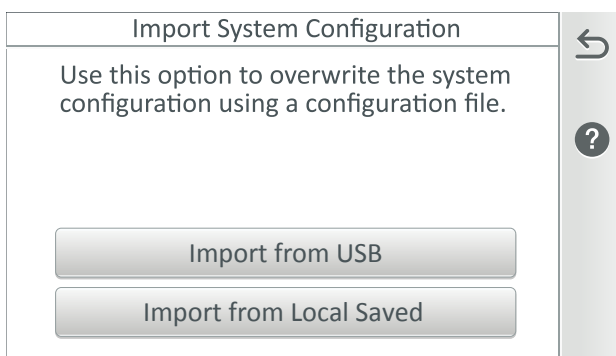

To access the Import/Export screen, tap Settings > Advanced System Configuration > Import/Export.

Note: Once a USB device is detected, a USB icon is displayed on the upper right corner of the screen.

Import System Configuration: Import from USB, or Import from Local Saved. This option will overwrite the system configuration using a configuration file. Navigate to the appropriate folder and select the Configuration file (.cfg) to import.

Import for USB: Insert a USB device into the USB Port on the front of the IntelliCenter™ Control System Outdoor Control Panel or the Wireless Remote. Tap Import from USB and navigate to the system configuration file (.cfg). Follow the on screen instructions to import the system configuration files.

Import to Local: Tap Import from Local and follow the on screen instruction.

IMPORT / EXPORT [ADVANCED SYSTEM CONFIGURATION]

Export System Configuration: Export from USB or local. Use this feature to export the system configuration file to a USB device. Select a location for the Configuration file (.cfg) and follow the screen prompts.

<p>Export System Configuration</p> <p>Use this option to export the current system configuration to a USB device.</p> <p>Export to USB</p> <p>Save Locally</p> <p>Export Local Configuration to USB</p>	<p>Select Location for Export</p> <p>Root</p> <p>121ndrive</p> <p>556sunsetblvd</p> <p>77pkplace</p> <p>996nlsd</p>

Import System Configuration

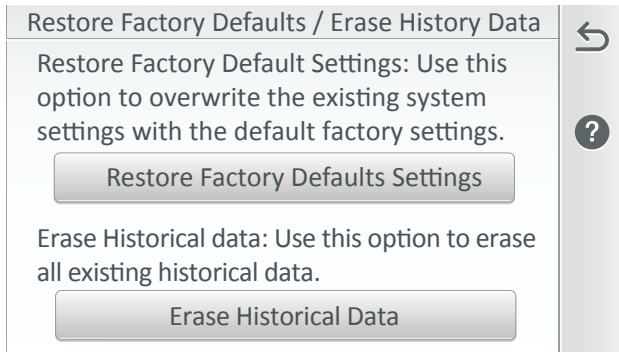

Are you sure you want to replace the current system configuration with this one?

120422_256sunsetblvd.cfg

No Yes

RESTORE FACTORY DEFAULTS [ADVANCED SYSTEM CONFIGURATION]

Restore Factory Defaults: Use this feature to overwrite the IntelliCenter™ Control System configuration with the default factory configuration settings. Tap Settings > Advanced System Configuration > Restore Factory Defaults.

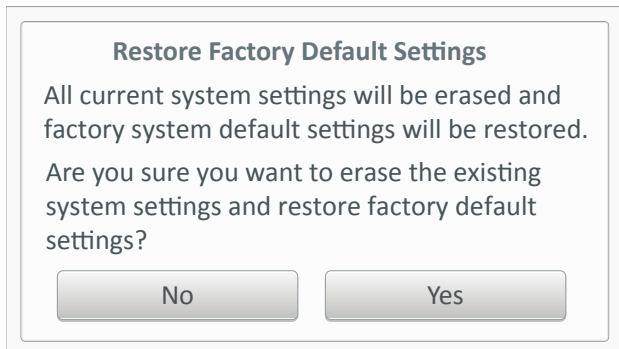

Tap the Restore Factory Defaults button to display the next message screen.

Restore Factory Default Settings: Tap this button to display the next message screen.

YES: Proceed to overwrite the current system configuration with the factory default settings. **Note: ALL current settings will be lost.**

NO: Tap No to exit this screen and return to the previous screen.

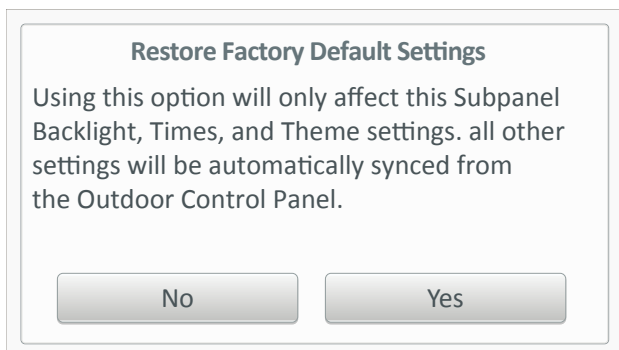

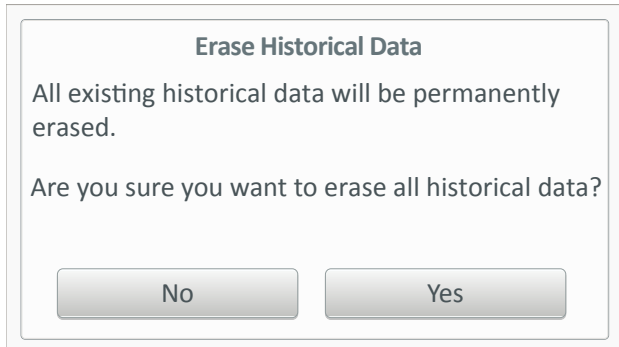

The Home screen is displayed after factory defaults are restored.

Erase Historical Data: Tap this button to display the next message screen.

YES: Proceed to erase all historical data.

NO: Tap No to exit this screen and return to the previous screen.

Expansion Panel: Restore Factory Default Settings: Tap this button to display the next message screen.

YES: Proceed to overwrite the current system configuration with the factory default settings. **Note: Only Backlight, Times and Theme settings will be erased from this panel. All other settings will be automatically synced to the Outdoor Control Panel.**

NO: Tap No to exit this screen and return to the previous screen.

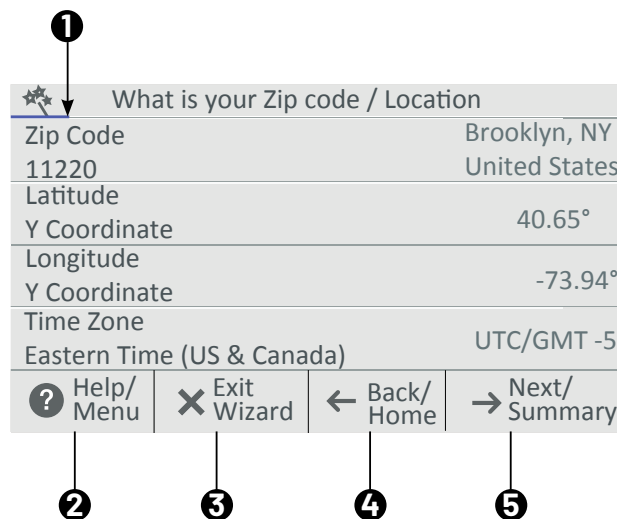

SETUP WIZARD [ADVANCED SYSTEM CONFIGURATION]

About the Setup Wizard: The IntelliCenter™ Control System Setup Wizard provides step-by-step screens to assist in setting up the pool/spa equipment. To complete the Setup Wizard can take about 10 minutes. If you are unsure how to configure a setting, skip that setting or tap and hold the Help button to display the MAIN MENU and select another item and continue with the setup. You can always skip a configuration and go back to the Wizard Setup later to change or edit a configuration setting. After the successful completion of the Configuration Wizard, you can edit any individual option and save the final configuration or exit without saving.

Internet Connection and adding a new account for www.intellicenter.com: For the initial system setup, after you have set your zip code and location, the next screen to display is the **Pentair User Portal** screen. From there you can setup either a Wireless or Ethernet connection to connect to the Internet and add a new account or login using an existing account, which includes setting up a password, pool system's owner's name, address and contact information. **This account allows access to www.intellicenter.com for remote access to the pool system via a smartphone or PC. For more information about the Pentair User Portal screen, see page 123.**

Setup Wizard Screen Navigation:

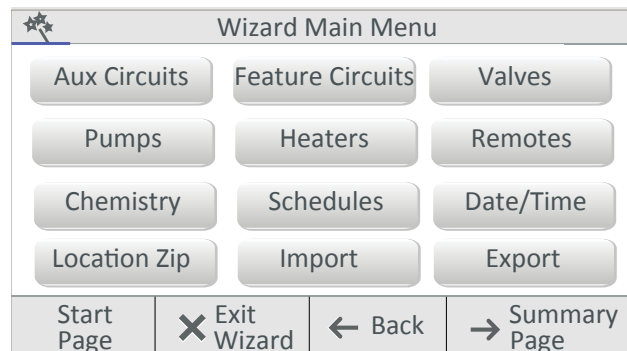

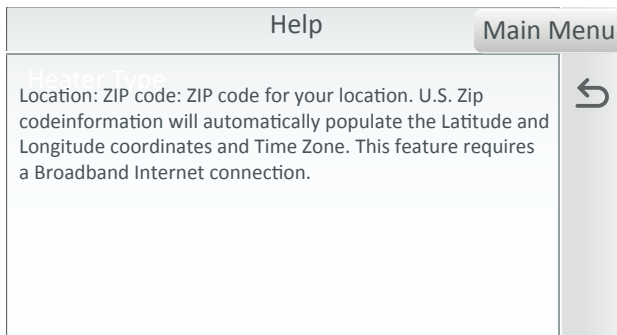

Note: While in the Configuration Wizard, if a power outage occurs or the screen times out, the system will display the Home Screen. Any changes made in the Wizard up to that occurrence will be saved.

- 1 Progress Bar Indicator:** The Blue Configuration Wizard progress bar indicates how many options have been completed.
- 2 Help/Menu:** Help: Tap this button to display brief informative information for the current screen. Menu: Tap hold and release to display the Wizard Setup Main Menu items. From this screen you can select which item to configure during the Wizard setup.

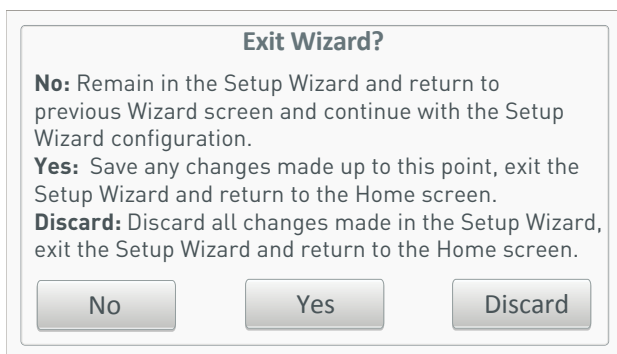

SETUP WIZARD [ADVANCED SYSTEM CONFIGURATION]

Setup Wizard Screen Navigation

Help Screen/Main Menu Button: From any of the Wizard Setup screens, tap Help to display the help text. Tap the Main Menu button to display the Wizard Main Menu items.

Main Menu: Tap the Main Menu button on the Help text screen to display the Main Menu items. Also, tap and hold and release the Help/Main Menu button on any of the Wizard Setup screens to display the Main Menu items.

Start Page: Return to the first Wizard "Welcome" screen.

Exit Wizard: Display the Exit Wizard screen options (see description below).

Back: Return to the previous screen.

Summary Page: Go to the Summary screen.

3 Exit Wizard: Tap the Exit Wizard button while to display the following Exit Wizard dialog screen:

No: Remain in the Setup Wizard and return to previous Wizard screen and continue with the Setup Wizard configuration.

Yes: Save any changes made up to this point, exit the Setup Wizard and return to the Advanced System.

Discard: Discard all changes made in the Setup Wizard, exit the Setup Wizard and return to the Home screen.

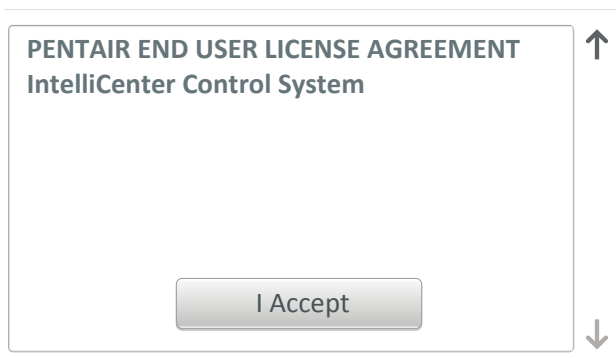

4 Back/Home: Tap to return to the previous screen. Tap and hold and release to return to the Wizard Setup first "Welcome" screen.

5 Next/Summary: Tap this button to proceed to the next Wizard Setup screen or item setting. Tap and hold and release to display the Summary screen (last Wizard Setup screen). Example: Before each Wizard configuration screen a YES/NO option screen is displayed. Tap YES then NEXT to enter the item configuration screen. Tap NO then NEXT to continue to the next option.

SETUP WIZARD [ADVANCED SYSTEM CONFIGURATION]

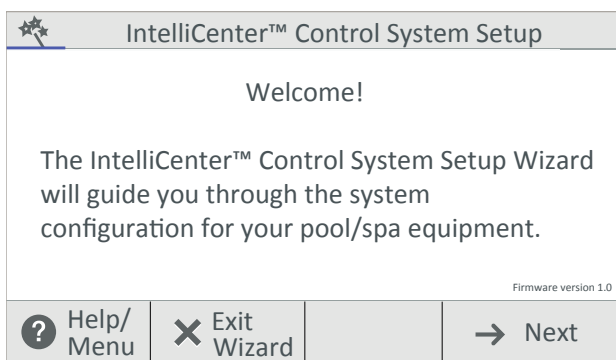

Initial System Power Up

First Time Setup: After all required pool/spa equipment has been connected to the IntelliCenter Control System, apply power to the system at the main panel circuit breaker. Upon the initial system power up, the outdoor LCD control panel will display the PENTAIR END USER LICENSE AGREEMENT. Please read this agreement. To continue, tap the Down arrow on the right side of the screen to scroll down to the end of the agreement and tap I Accept to accept the agreement. The Home screen is then displayed. Note: The Pentair End User License Agreement is displayed only one time after the initial system power up.

Note: After you tap I AGREE on the Pentair End User License Agreement the IntelliCenter™ Control System Wizard dialog is displayed.

Setup Wizard (First Time Setup): To start the Setup Wizard for the first time, from the Home screen, tap **Settings > Advanced System Configuration > Wizard**. The following screen is displayed:

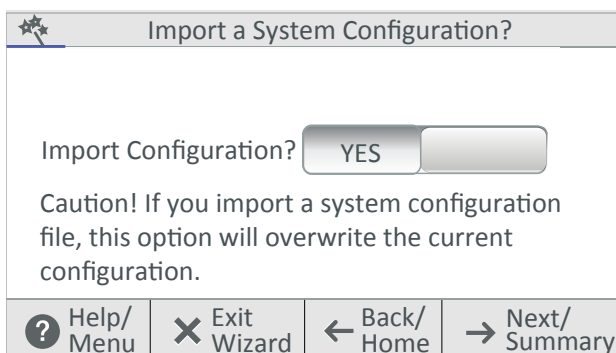

IntelliCenter Control System Setup Wizard:

The first Setup Wizard configuration screen, Displays the current system firmware version.

Help/Menu: Tap to display the Help text. Tap hold and release to display the Wizard MAIN MENU options.

Exit Wizard: Tap this button to exit the Setup Wizard and return to the Home screen.

Next: Tap Next to continue with the Setup Wizard and display the Detected Hardware screen.

Import System Configuration:

Yes: Use this option to Import a system configuration file (.CFG) from a USB device plugged into the USB Port on the front of the IntelliCenter Control System Outdoor control panel. Note: This option will overwrite the current system configuration.

No: Tap No then Next to continue with the Setup Wizard.

SETUP WIZARD [ADVANCED SYSTEM CONFIGURATION]

Import for USB: Insert a USB device into the USB Port on the IntelliCenter™ Control System Outdoor or Indoor control panel. Tap Import from USB and navigate to the system configuration file (.CFG). Follow the on screen instructions to import the system configuration files plugged into the USB Port on the Outdoor or Indoor control panel.

Local or Copy from Remote: These options will overwrite the system configuration using a configuration file. Navigate to the appropriate folder and select the Configuration file (.CFG) to import. For more information, see page 128.

Detected Hardware			
Setup had detected the following hardware:			
Personality: i5PS			
Expansion Module1: None			
Expansion Module2: None			
Expansion Module3: None			
Expansion Module4: None			
Help/Menu	Exit Wizard	Back/Home	Next/Summary

Detected Hardware: Displays the installed IntelliCenter™ Control System Personality main circuit board and Expansion Cards (if applicable).

Next: Tap Next to continue to the Zip Code / Location settings screen.

Back/Home: Tap Back to go to the previous screen. Tap hold and release to the first Wizard screen.

Exit Wizard: Tap this button to exit the Setup Wizard and display the exit options (No, Yes, Discard).

Update date & Time: Tap Yes and Next to update the system date and time.

Clock Mode: Select either 12 hour or 24 hour mode.

Daylight Saving Time: Select ON to automatically set the yearly daylight saving time for your location. Select NO to manually change the daylight savings time for your location. Converting a 12 hr. time to 24 hr. (military time) is from 1:00 PM to 11:59 PM, then add 12 hours, and from 12:00 AM (midnight) to 12:59 AM subtract 12 hours.

Zip Code / Location Screen: After the IntelliCenter™ Control System has verified the login information successfully, the Location screen is displayed. Tap any setting to update the location information.

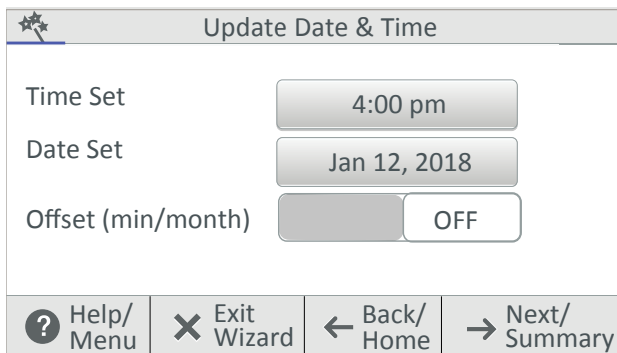

See page 94.

What is your Zip code / Location	
Zip Code	Brooklyn, NY
11220	United States
Latitude	
Y Coordinate	40.65°
Longitude	
Y Coordinate	-73.94°
Time Zone	UTC/GMT -5
Eastern Time (US & Canada)	
Help/Menu	Exit Wizard

Would you like to set the Date & Time?	
Jan. 12, 2018 6:60 pm	
Update Date & Time	<input checked="" type="checkbox"/> YES <input type="checkbox"/>
Help/Menu	Exit Wizard
Back/Home	Next/Summary

Note: If the PC time and date do not match the time and date displayed on the Home screen, you need to reset the PC time to match the date and time of the IntelliCenter Control System. See page 94 for more information.

SETUP WIZARD [ADVANCED SYSTEM CONFIGURATION]

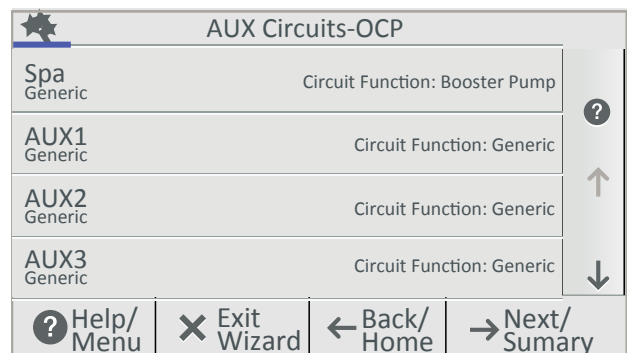

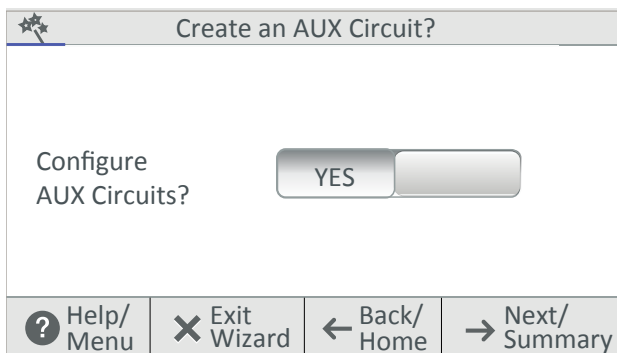

Time Set: Tap the Time Set button and set the current time for your location. Tap Check to save and return to the previous page.

Date Set: Tap the Date Set button and set the current date. Tap Check to save and return to the previous page.

Offset (min/month): Select ON to offset the current time (minutes) and month.

Configure AUX CIRCUITS: Setup system AUX circuits.

Create AUX Circuit: Tap **Yes** then **Next** to configure an AUX Circuits. Tap **No** then **Next** to continue to Configure Feature Circuits.

Select an AUX Circuit: Tap on an AUX Circuit name. From the next screen configure the AUX settings:

Circuit Function: Select the Circuit Function.

Circuit Name: Select a Circuit name from the pre-defined list of custom circuits names, then tap Check to save and return to the previous screen.

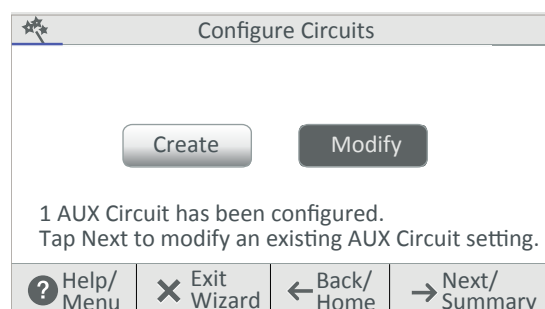

Note: For a complete list of Circuit Names see page 103.

Visible in Features: Yes/No. Select Yes to display the selected circuits in the Feature screen on Home screen.

Egg Timer: Select ON to select a manual time-out of 0-12 hours for this circuit. The Egg Time is a specified time delay (hrs/mins) for the circuit, once it is turned on.

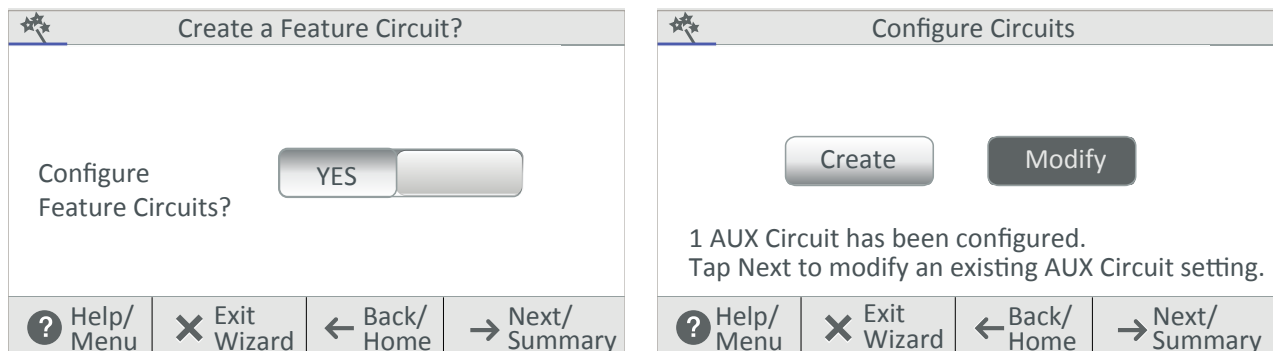

Freeze Protection: Assign freeze protection for this circuit. See page 98 for details.

Create / Modify: Tap **Next** after the first AUX Circuit has been configured. The Configure Circuits screen is displayed. Select either **Create** or **Modify** to create a new circuit or modify an existing AUX Circuit. After you have configured all of the available AUX Circuits, tap **Next** to continue to Feature Circuits.

SETUP WIZARD [ADVANCED SYSTEM CONFIGURATION]

Configure Feature Circuits: Configure Feature circuits (a total of 32).

Create / Modify: Tap **Next** after the first AUX Circuit has been configured. The Configure Circuits screen is displayed. Select either **Create** or **Modify** to create a new circuit or modify an existing AUX Circuit. After you have configured all of the available AUX Circuits, tap **Next** to continue to Configure Valves.

Create Feature Circuit: Tap Yes then **Next** to configure Feature Circuits. Tap **No** then **Next** to continue to Configure Feature Circuits.

Select a Circuit Function: Tap on either Generic or Spillway for the circuit function. From the next screen configure the Feature Circuit settings:

Circuit Function: Select either Generic or Spillway.

Circuit Name: Select a Circuit name from the pre-defined list of custom circuits names, then tap Check to save and return to the previous screen.

Note: For a complete list of Circuit Names see page 103.

Visible in Features: Yes/No. Select Yes to display the selected circuits in the Feature screen on Home screen. **Tap Next to continue.**

Egg Timer: Select ON to select a manual time-out of 0-12 hours for this circuit. The Egg Time is a specified time delay (hrs/mins) for the circuit, once it is turned on.

Freeze Protection: Assign freeze protection for this circuit. See page 117 for details.

Valves

Configure Valves: Tap Yes then **Next** to configure a new valve type. Tap **No** then **Next** to continue to Configure IntelliChlor SCG. **See Valve Circuits.**

Intake (standard), Return (standard): To change the valve name, tap Intake or Return. Tap Valve name, enter the new valve name then tap Check to save and return to the previous screen.

Valve A and Valve B: If the optional Valve Module installed, Valve A and Valve B are displayed. To change the valve name, and assign a circuit to Valve A and Valve B, tap Valve A or Valve B on this screen.

SETUP WIZARD [ADVANCED SYSTEM CONFIGURATION]

Valve Name: To change the valve name, tap Intake or Return. Tap Valve name, enter the new valve name then tap Check to save and return to the previous screen.

Assigned Circuit for Valve A or Valve B: Tap unassigned, and select an AUX circuit for the valve. Tap Check to return to the previous screen. Tap Valve name, enter the new valve name then tap Check to save and return to the previous screen.

Pumps

Tap Yes then **Next** to configure a new pump (Tap **No** then **Next** to continue to Configure Heaters).

Create: Tap Create then Next to select a new pump type (Single Speed, Dual Speed, IntelliFlo VS, IntelliFlo VF and IntelliFlo VSF) and configure the selected pump settings.

Modify: Tap **Modify then Next** to display the list of configured pumps. Tap New Pump to add a pump. From this screen you can add or delete pumps from the list. When finished with setting up pump settings, tap **Next** to continue to the Configure Heaters screen.

IntelliFlo VF Settings: Tap Settings: Pump Type (select a different type of pump), Pump Name (enter a name for the pump), Pump Address: select an address for the pump (1-16). Tap Back twice. Tap Flow Circuits. Tap New Flow Circuits (to change the pump circuit). Flow (GPM): Tap the +/- button to set the flow rate (15-134 GPM). Tap Next twice to add another pump or tap Next twice to configure a heater.

IntelliFlo VS Settings: Tap Settings: Pump Type (select a different type of pump), Pump Name (enter a name for the pump), Pump Address: select an address for the pump (1-16). Tap Back twice. Tap Speed Circuits. Tap Speed Circuits. Tap New Speed Circuits (to change the pump circuit). Speed (RPM): Tap the +/- button to set the pump speed (450-3450 RPM). Tap Next three times to configure a heater.

IntelliFlo VSF Settings: Tap Settings: Pump Type (select a different type of pump), Pump Name (enter a name for the pump), Pump Address: select an address for the pump (1-16). Tap Back twice. Tap Speed/Flow Circuits. Tap New Speed/Flow Circuits (to change the pump circuit).

Type: GPM/RPM): Select either GPM (20-140) or RPM (450-3450). Tap the +/- button to set the speed (RPM) or Flow Rate GPM). Tap Next twice to add another pump or tap Next twice to configure a heater.

Single Speed Pump Settings: Pump Type (select a different type of pump), Pump Name, and Body (pool, spa or pool/spa). Tap Return then Next to continue and add another pump or tap No twice to configure a heater.

Two Speed Pump Settings: Tap Settings: Pump Type (select a different type of pump), Pump Name, Low Speed Circuit and High Speed Circuits. Select a circuit for the low speed and the high speed. You can choose up to (4) four high speed circuits.

SETUP WIZARD [ADVANCED SYSTEM CONFIGURATION]

Heaters

Tap Yes then **Next** to configure a new heater (Tap **No** then **Next** to continue to Configure Pumps).

Create: Tap **Create** then **Next** to select a new heat source type (Gas, Solar, Heat Pump, UltraTemp or Hybrid) and configure the selected heat source settings.

Heater Name: Enter a name for the heater.

Affiliated Body: Pool, Spa, or Pool and Spa.

Modify: Tap **Modify then Next** to display the list of configured heaters. Tap New Pump to add a heat source. From this screen you can add or delete a heat source from the list. When finished with setting up heater source settings, tap **Next** to continue to the Configure Valves screen.

+ Add Heater: Tap **Add Heater** to display the available heaters. When finished configuring up the heater settings. Tap **Next** to continue to the Configure Remotes screen.

Remotes (Spa-Side)

iS4 Remote: See page 121 for more information.

- To setup an iS4 remote, select Yes. If there is no iS4 remote installed, select No and tap Next to continue.
- **Remote Name:** If needed, you can change the name of the remote.
- **Enable Remote ON/OFF):** To enable the remote select ON. Tap Next to continue.
- **Button Assignments:** Tap Configure. Tap Button 1, then tap the AUX circuit button for this circuit. Tap Back and repeat for buttons 2-4. When all buttons have been assigned, tap Return arrow until SpaCommand remote screen is displayed. Tap Next to continue.

Remotes

SpaCommand® Remote: To setup a SpaCommand remote, select Yes. If there is no SpaCommand remote installed, select No and tap Next to continue.

- **Remote Name:** If needed, you can change the name of the remote.
- **Enable Remote (ON/OFF):** To enable the remote select ON. Tap Next to continue.
- **Remote Channel:** Assign a channel from 1-4. Tap Return.
- **Affected Pump:** Select pump assigned to this remote.
- **Button Assignments:** Tap Configure. Tap Button 1, then tap the AUX circuit button for this circuit. Tap Back and repeat for buttons 2-9. When all buttons have been assigned, tap the Return arrow until SpaCommand remote screen is displayed. Tap Next to continue.

SETUP WIZARD [ADVANCED SYSTEM CONFIGURATION]

Chemical Controllers: IntelliChem® Controller and IntelliChlor® SCG

Note: The IntelliCenter™ Control System supports one IntelliChem Controller and one IntelliChlor® SCG.

IntelliChem Controller: Tap Yes then Next to configure one IntelliChem. Tap No for no IntelliChem Controller installed. IntelliChem Settings: Select the Channel (1-16) for the device.

Body 1 is assigned Pool/Spa for shared equipment or choose pool or spa for single body systems, Body 2 is assigned to Spa for shared equipment systems. This screen displays the body of water assigned to the device.

IntelliChlor SCG: Tap Yes then Next to configure one IntelliChlor SCG. Tap No for no IntelliChlor SCG installed.

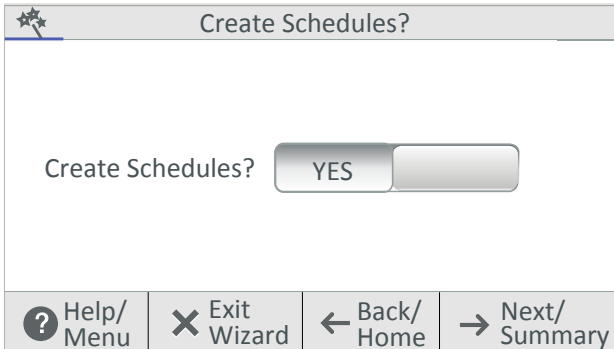

Body 1 is assigned Pool/Spa for shared equipment or choose pool or spa for single body systems, Body 2 is assigned to Spa for shared equipment systems. This screen displays the body of water assigned to the device.

Chlorination Output Levels: Pool /Spa Output Levels: Set the Pool and Spa chlorine output levels. The system can only generate chlorine while the filter pump is operating. Set the run time percentage to produce chlorine. The higher the percentage the more chlorine is produced. Lower the percentage for less chlorine production.

Note: See page 119 for information about the IntelliChem Controller and IntelliChlor SCG.

SETUP WIZARD [ADVANCED SYSTEM CONFIGURATION]

Schedules

Schedules: See page 62 for more information.

- If Yes then Next to configure system schedules.
- If no schedules are required at this time, tap No then Next to continue to the Setup Wizard Summary screen.

Create / Modify: Tap Create then Next and select a circuit to schedule. Tap Modify to change an existing schedule.

Create a Schedule: Tap **Create** then **Next**. From the Schedules screen, tap **Add Schedule** and choose the circuit. Tap **Next**. From the Schedule Settings screen, tap the Schedule name button (Weekly or One Time) and select the days to run the schedule. Tap **Check** when finished to save the schedule.

Start Time: From the Select Start Time screen, tap the **Up/Down** arrow button to set the Start time for the schedule. Tap **Check** to save and return to the previous screen. Tap **Next** to continue to the Stop Time screen.

Stop Time: From the Select Start Time screen, tap the **Up/Down** arrow button to set the Start time for the schedule. Tap **Check** to save and return to the previous screen. Tap **Next** to continue to the next screen. Tap **Yes** to add more schedules, if not tap **No** to continue to the Setup Wizard Summary screen.

Summary

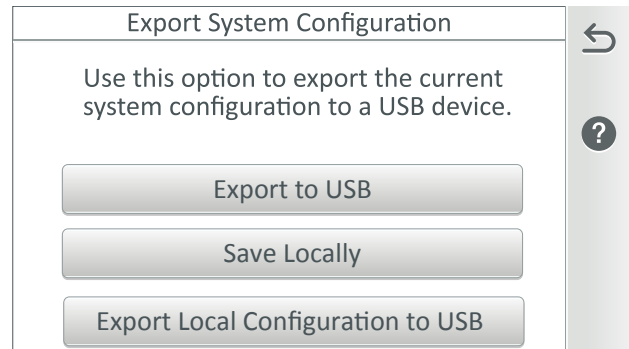

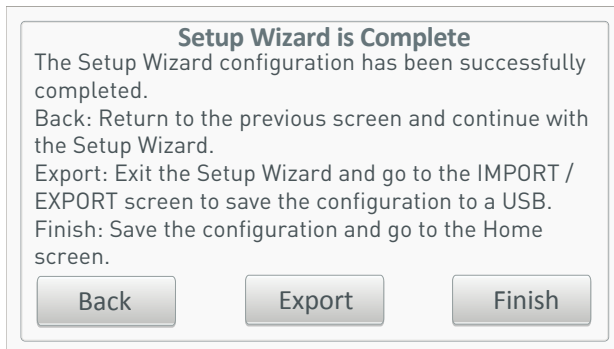

Setup Wizard Summary (Edit Screen):

From the Setup Summary screen you can review the changes you have made to the system. If modifications are necessary, tap the item and make the changes. If everything appears to be correct, press **Next** to proceed to the Setup Wizard "Finish" screen.

SETUP WIZARD [ADVANCED SYSTEM CONFIGURATION]

Setup Wizard Complete

Back: Return to the previous screen and continue with the Setup Wizard.

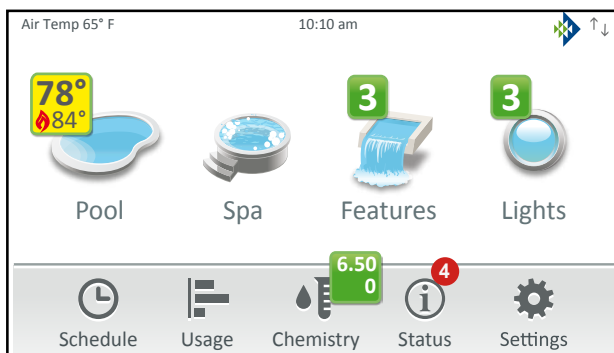

Export: Go to the Export System configuration screen. Tap Yes then Next, select a folder location, tap Check to save the export file. Tap OK to return to Wizard Complete screen. Tap No then Next to return to the Wizard Complete screen. Tap No IMPORT / EXPORT screen to save the configuration to a USB. See page 128.

Export System Configuration: Tap Export to USB flash drive to export the current system configuration.

Export to Local: Tap Export to Local to save the current system configuration.

Back: Return to the Create Schedule screen.

Finish: Save the configuration and go to the Home screen. "Applying Settings" is displayed, then the Home screen is displayed. The Setup Wizard has been successfully completed.

Home Screen

Dimness Level: Adjust the contrast level from 10 to 100%.

Dim Display (min): While in other screens, sets the time to return to the Home screen (from 0 to 240 minutes (20 hrs).

Turn Off Display (min): Set the time to turn off the screen from 0 to 240 minutes (20 hrs).

Note: The time set to turn off the screen also affects the start time of the Deep Sleep feature (Wireless Remote only), see below for details.

Screen Settings

To access the screen settings, from the Home screen, tap Settings > Advanced System Configuration > General > Day/Night Theme,

Back Light: Brightness Level: Adjust the screen brightness level from 33 to 100%.

Battery Conservation Mode (Deep Sleep):

Tap Deep Sleep Mode to turn on this feature. The default setting is ON. This feature allows you to save the battery life while the wireless remote is in its cradle. Deep Sleep (Hr): Deep Sleep time can be set from 1 to 3 hours (Default 3 hrs.). Select when you want the device to go to sleep to conserve battery life.

CONTROL SYSTEM REMOTE ACCESS INSTRUCTIONS

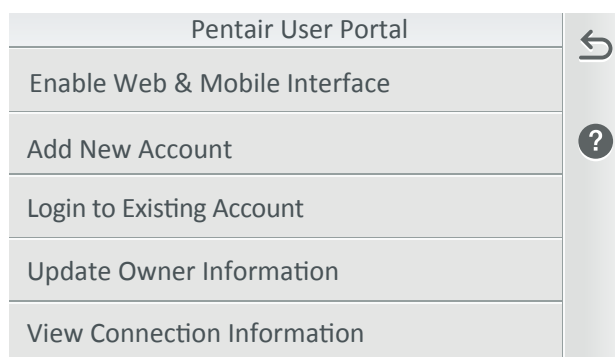

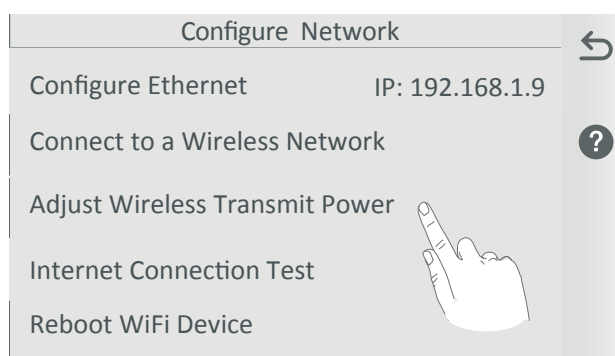

Wireless Network Antenna Location

(see IntelliCenter™ Control System Wireless Connections on page 142)

- **Check the Wireless Signal at the Equipment Pad:** Use a mobile device or laptop to check your home network signal is available in the location of the equipment pad. If your home network name displays in the list with a good signal strength, then mount the antenna at that location. If the network signal strength is low, find an area that has a stronger signal or install a wireless extender and try the process again. Once the antenna is installed in the correct location you are ready to configure the IntelliCenter Control System for remote access.
- **Internet Connection and adding a new account for www.intellicenter.com:** For the initial system setup, enter your zip code and location. The next screen to display is the **Pentair User Portal** screen. From there you can setup either a Wireless or Ethernet connection to connect to the Internet. Add a new account or login using an existing account, which includes setting up a password, pool system's owner's name, address and contact information. This account allows access to www.intellicenter.com for remote access to the pool system via a smartphone or PC. **For more information about the Pentair User Portal screen, see page 89.**

Remote Access Connection Instructions

1. From the Home screen, tap **Settings > Advanced System Configuration > Network and WiFi Setup**, see page 123.
2. Tap **Connect to a Wireless Network** to connect to the wireless network. The available networks will be displayed. This can take up to a minute or more to complete.
3. Select the wireless network and enter the password.
4. Once the antenna has rebooted, tap **Internet Connection Test** to verify the Internet connection.
5. Once the Internet connection test passes, press and hold the Return arrow to return to the home screen.
6. Tap **Settings > Pentair User Portal**, see page 89.
7. Tap **Enable Web & Mobile Interface**.
8. Change the toggle to **ON** and tap the Return arrow.

CONTROL SYSTEM REMOTE ACCESS INSTRUCTIONS

9. Tap **Add New Account**.
10. Tap **Property Name** and enter the name of the property, and tap the Checkmark.
11. Tap **Email** and enter the users Email address, and tap the Checkmark.
12. Tap the Checkmark to go to the next screen.
13. The users Email address should be shown on the first button. If it is not shown, tap the button and add it as described in the steps above.
14. Tap **Enter Password** and enter a Password, then tap the checkmark. Note: The password should have a least one uppercase letter.
15. Tap the Re-Enter Password button and retype the password, and tap the Checkmark.
16. Tap the Checkmark to complete the process. Once the account setup is complete, return to the home screen and wait for the Pentair logo to appear. After the Pentair logo appears you are connected to **www.intellcenter.com** and should be able to remotely connect to your IntelliCenter Control System using your User Name and Password used previously.

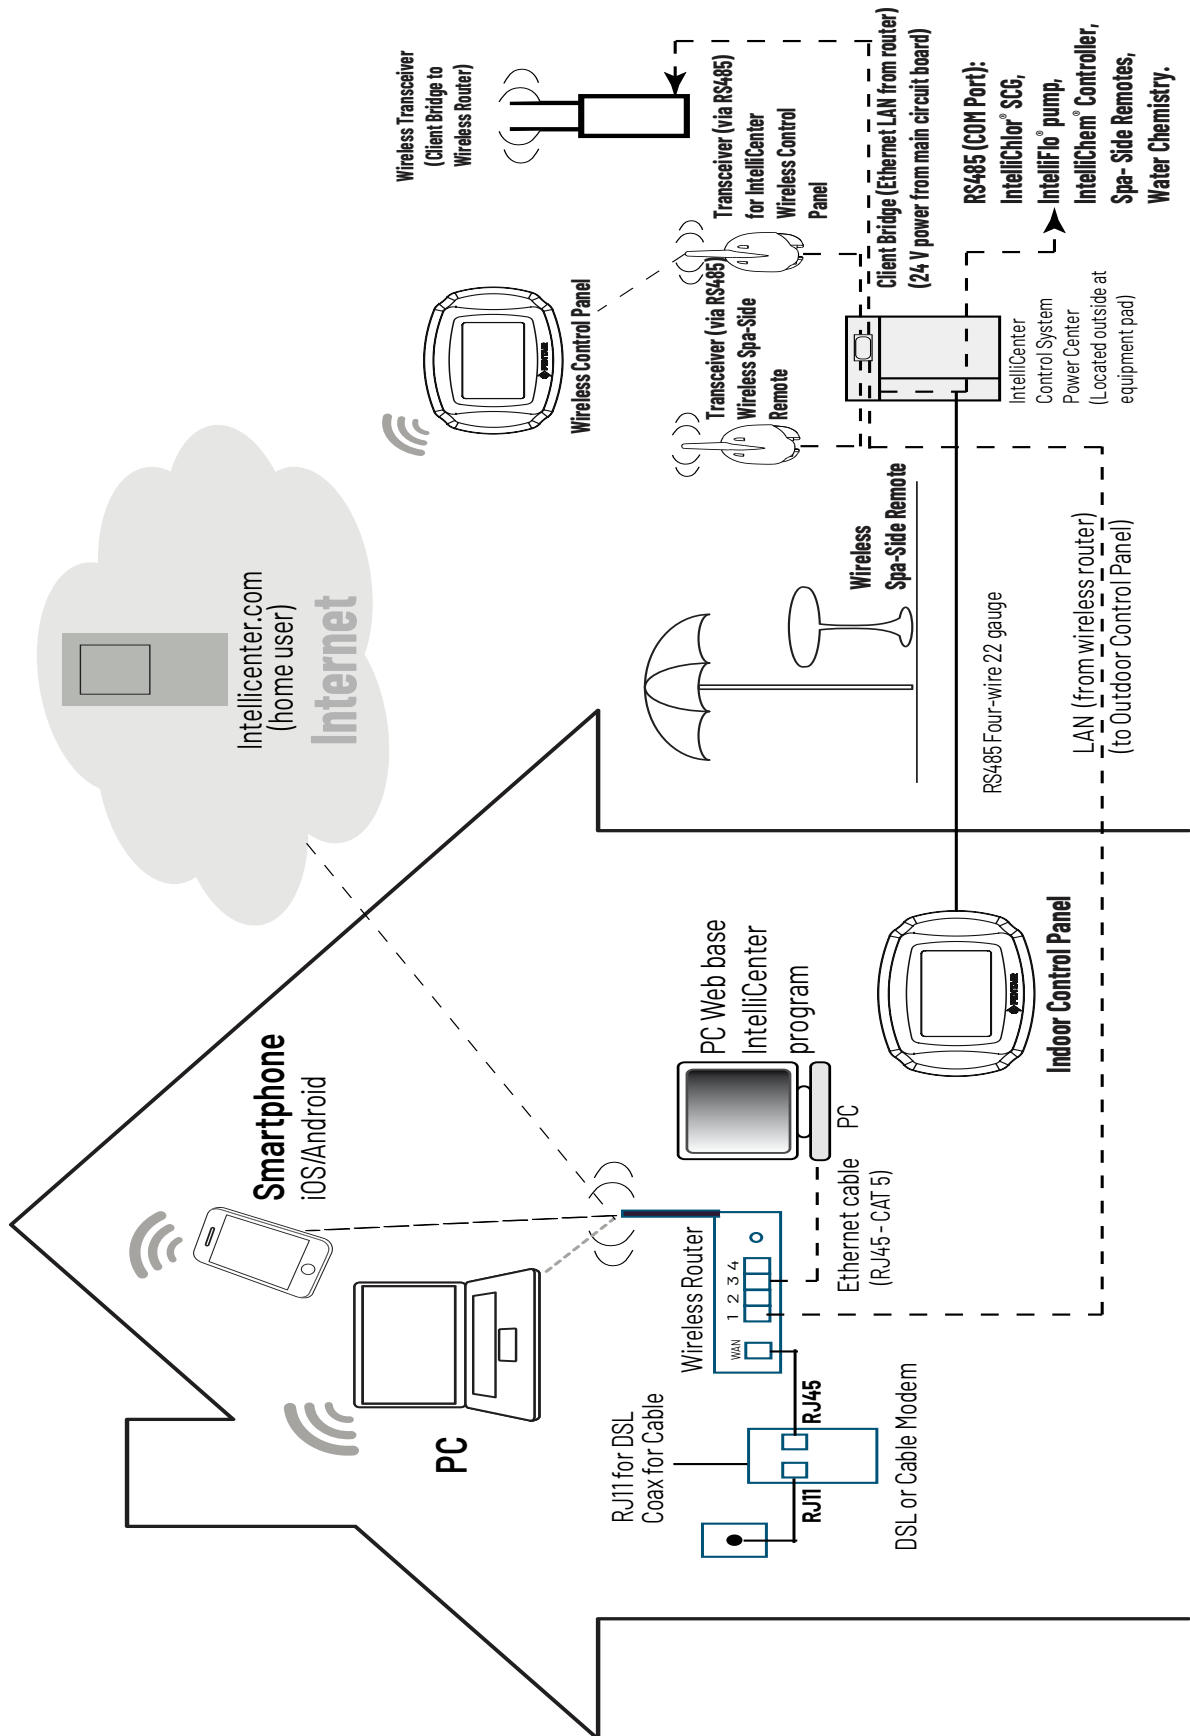

Adjusting the Antenna Power

This feature to adjust the antenna signal power should only be used when the wireless network connection is unstable or your home network name is not displayed in the available list.

1. From the Home screen, tap **Settings > Advanced System Configuration > Network and WiFi Setup**.
2. Tap **Adjust Wireless Transmit Power** and choose a transmit power, and tap the Checkmark.
3. Once the antenna has rebooted it will transmit using increased the power.
4. Repeat Step 1-16 (see previous page) as required to obtain a connection.

CONTROL SYSTEM WIRELESS CONNECTIONS DIAGRAM

GLOSSARY

802.11: Refers to a family of specifications developed by the IEEE for Wireless LAN technology. 802.11 specifies an over-the-air interface between a wireless client and a base station or between two wireless clients and provides 1 or 2 Mbps transmission in the 2.4 GHz band using either frequency hopping spread spectrum (FHSS) or direct sequence spread spectrum (DSSS).

802.11b: An extension to 802.11 that applies to Wireless LANs (WLAN) and provides 11 Mbps transmission (with a fallback to 5.5, 2 and 1 Mbps) in the 2.4 GHz band. 802.11b uses only DSSS. Throughput data rate is 5+ Mbps in the 2.4 GHz band.

802.11g: An extension to 802.11 that applies to Wireless LANs (WLAN) and provides 54 Mbps transmission (with a fallback to 1, 2, 5.5, 6, 9, 11, 12, 24, 36, and 48 Mbps) in the 2.4 GHz band. 802.11g uses Orthogonal Frequency Division Multiplexing (OFDM). Throughput data rate is 11+ Mbps in the 2.4 GHz band.

Access Point: An Access Point (AP) is stand-alone wireless hub that allows any computer that has a wireless network adapter to communicate with another computer and to connect to the Internet.

Client computer: The computer that gets its Internet connection by sharing either the host computer's connection or the Access Point's connection.

Control Panel: The IntelliCenter™ Control System Outdoor Control Panel with flexible hinge. Installed in upper portion of IntelliCenter Control System Power Centre.

EMI (Electromagnetic interference) filter: Protective circuit element that must be used between the IntelliChlor transformer and supply lines.

Expansion Kit: A kit that includes additional auxiliaries to an existing Personality Kit. Requires a Power Centre for each Expansion Kit.

Feature Circuits: Programmable circuits that can control non-high voltage circuits, and valve actuators.

Freeze Protection: A circuit with freeze protection circulates water to protect pipes from freezing, if the outdoor air temperature sensor detects the temperature is getting close to freezing (below 36° F).

Gigahertz (GHz): A unit of frequency equal to 1,000,000,000 cycles per second.

High Voltage Compartment: Large lower right compartment of Power Centre for all high voltage wiring including relays.

Host computer: The computer that is directly connected to the Internet using a modem or network adapter.

Hybrid Heater: UltraTemp ETi Hybrid Pool Heater by Pentair: Combines a pool heat pump and an ultra-high-efficiency, gas-fired heater in the same unit. Eco-friendly pool heater that delivers superior energy savings.

Indoor Control Panel: The IntelliCenter™ Control System colour touch LCD screen is wired to the Personality board in the Power Centre. The control panel can be wall mounted inside a house.

iS4: Four function Spa-Side remote. Can be spa wall or deck mounted.

SpaCommand: Up to ten function spa-side remote with temperature changing capability. Can be spa wall or deck mounted.

IntelliChlor® (SCG): Salt Chlorine Generator. Uses a process known as electrolysis to produce sodium hypochlorite (liquid chlorine) from a low concentration of salt added to the pool water.

Internet Protocol (IP) address: The address of a computer that is attached to a network. Part of the address designates which network the computer is on, and the other part represents the host identification.

LAN: A Local Area Network (LAN) is a high-speed, low-error data network covering a relatively small geographic area.

Load Centre: See Power Centre. Also known as the “sub-panel.”

Low Voltage Compartment: Top compartment of Power Centre for all low voltage wiring.

Low Voltage Raceway: Vertical space in the left side of Power Centre for low voltage cabling.

Megabits-per-second (Mbps): Transmission speed of 1,000,000 bits per second.

Megahertz (MHz): A unit of frequency equal to 1,000,000 cycles per second.

Mud Box: Enclosure to provide mounting features for SpaCommand controller spa-side remote that is cast into gunite, concrete, or other spa wall/deck construction.

Wireless Controller: Wireless controller for IntelliCenter™ Control Systems with all the functionality of the Indoor Control Panel.

Outdoor Control Panel: LCD colour touch control panel with flexible hinge is installed in upper portion of Power Centre and connected to the main circuit board (iS5).

Personality Board: The circuit board mounted on top of the Outdoor Control Panel motherboard. The Personality board defines the system capabilities.

Personality Kit: Set of parts to define the capability of a system; may include: Outdoor Control Panel, temperature sensors, actuators, and additional relays.

Power Centre: Metal enclosure with power relays and transformer. The Power Centre is installed with Personality Kit. Used for distributing power for controlling IntelliTouch® Control Systems. Also known as the “sub-panel.”

GLOSSARY

Relay Circuits: The circuits that control the relays on the Personality Board. Connectors on top edge of the circuit board.

RF: Radio Frequency.

Screw Terminal Connector: Removable connector that may attach to circuit board with multiple sockets (anywhere from 2 to 12) to receive wires from controllers and sensors; wires held by screw terminals; multiple wires of a small enough gauge (usually 22 AWG) may be coupled to a single socket of a terminal connector.

Salt Chlorine Generator (SCG): Automated pool chlorinator that sanitizes using salt water (see IntelliChlor Salt Chlorine Generator).

SpaCommand® Controller: Up to ten function spa-side remote with temperature changing capability. Can be spa wall or deck mounted. Connects to the Power centre via RS-485 COM port.

Transceiver: Circuit board with attached antenna that can send and receive radio frequency (wireless) transmissions.

Wi-Fi: Wireless Fidelity is meant to be used generically when referring of any type of 802.11 network, whether 802.11b, 802.11g, 802.11a. WiFi is a seal of approval from the Wireless Ethernet Compatibility Alliance (WECA).

Wireless Controller: Wireless controller for the IntelliCenter™ Control System with all the functionality of the Indoor and Outdoor Control Panel. Connects to the Power centre via RS-485 COM port.

WLAN: Wireless Local Area Network is a type of local-area network that uses high-frequency radio waves rather than wires to communicate between nodes.

IMPORTANT

Please attach your sales invoice/docket here as proof of purchase should warranty service be required. Please do not return warranty form to Pentair Australia - Retain for your records.
